- ▶ **Sympathomimetics, vasoconstrictor** might increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- Paclitaxel** → see taxanes
- Palbociclib** → see TABLE 15 p. 1450 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1045. [Severe] Study
- ▶ **Palbociclib** increases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study

Palbociclib (continued)

- ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobiciclat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1045. [\[Severe\]](#) Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Avoid dose. [\[Moderate\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1045. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1045. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1045. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1450
- ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
- ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- Paliperidone** → see antipsychotics, second generation
- Palonosetron** → see 5-HT₃-receptor antagonists
- Pamidronate** → see bisphosphonates
- Pancreatin**
 - ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [\[Moderate\]](#) Theoretical
- Pancuronium** → see neuromuscular blocking drugs, non-depolarising
- Panitumumab** → see monoclonal antibodies
- Panobinostat** → see [TABLE 15](#) p. 1450 (myelosuppression), [TABLE 9](#) p. 1449 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 984. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1449
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (nebivololol)**. Monitor and adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobiciclat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 984. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 984. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 984. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 984. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 15](#) p. 1450
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1449
- Pantoprazole** → see proton pump inhibitors
- Paracetamol** → see [TABLE 1](#) p. 1447 (hepatotoxicity)
 - ▶ **Alcohol** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [\[Severe\]](#) Study → Also see [TABLE 1](#) p. 1447
 - ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [\[Moderate\]](#) Theoretical
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study → Also see [TABLE 1](#) p. 1447
 - ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
 - ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [\[Severe\]](#) Anecdotal
 - ▶ **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **penicillins (flucloxacillin)**. [\[Severe\]](#) Anecdotal → Also see [TABLE 1](#) p. 1447
 - ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [\[Mild\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study
- Paraldehyde** → see antiepileptics
- Parathyroid hormone**
 - ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [\[Moderate\]](#) Study
- Parcoxib** → see NSAIDs
- Paricalcitol** → see vitamin D substances
- Paroxetine** → see SSRIs
- Pasireotide** → see [TABLE 6](#) p. 1448 (bradycardia), [TABLE 9](#) p. 1449 (QT-interval prolongation)
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [\[Severe\]](#) Theoretical

Patiromer

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

Pazopanib → see TABLE 9 p. 1449 (QT-interval prolongation)

- ▶ Oral **antacids** are predicted to decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to pazopanib. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to pazopanib. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1045. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to pazopanib. [Moderate] Study
- ▶ Oral **calcium salts (calcium carbonate)** -containing antacids might decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1045. [Moderate] Study
- ▶ Pazopanib is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Dabrafenib** is predicted to decrease the exposure to pazopanib. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to pazopanib. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to pazopanib. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to pazopanib. H₂ receptor antagonists should be taken 10 hours before or 2 hours after pazopanib. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1045. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1045. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to pazopanib. [Moderate] Study
- ▶ **Lapatinib** increases the exposure to pazopanib. Avoid. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ **Letermovir** is predicted to increase the exposure to pazopanib. [Moderate] Study
- ▶ Pazopanib is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1045. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to pazopanib. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to pazopanib. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to pazopanib. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ Pazopanib is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to pazopanib. Avoid or administer concurrently without food. [Moderate] Study

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to pazopanib. Avoid. [Severe] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to pazopanib. [Severe] Study
- ▶ Pazopanib might affect the exposure to **statins (atorvastatin, pravastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ Pazopanib might cause increased ALT concentrations when given with **statins (simvastatin)**. [Moderate] Study
- ▶ **Pegaspargase** → see TABLE 1 p. 1447 (hepatotoxicity), TABLE 15 p. 1450 (myelosuppression)
- ▶ Pegaspargase is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1450
- ▶ Pegaspargase affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1447 → Also see TABLE 15 p. 1450
- ▶ Pegaspargase potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before pegaspargase. [Severe] Anecdotal → Also see TABLE 1 p. 1447 → Also see TABLE 15 p. 1450
- ▶ **Peginterferon alfa** → see interferons
- ▶ **Pembrolizumab** → see monoclonal antibodies
- ▶ **Pemetrexed** → see TABLE 15 p. 1450 (myelosuppression), TABLE 2 p. 1447 (nephrotoxicity)
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with pemetrexed. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) potentially increases the exposure to pemetrexed. Use with caution or avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with pemetrexed. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to pemetrexed. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 1447
- ▶ **Penicillamine** → see TABLE 2 p. 1447 (nephrotoxicity)
- ▶ Oral **antacids** decrease the absorption of oral penicillamine. Separate administration by 2 hours. [Mild] Study
- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with penicillamine. Avoid. [Severe] Theoretical
- ▶ Penicillamine potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Gold** potentially increases the risk of adverse effects when given with penicillamine (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study
- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with penicillamine. Avoid. [Severe] Theoretical
- ▶ Oral **iron** is predicted to decrease the absorption of oral penicillamine. Separate administration by at least 2 hours. [Mild] Study
- ▶ **Zinc** is predicted to decrease the absorption of penicillamine. [Mild] Theoretical
- ▶ **Penicillins** → see TABLE 1 p. 1447 (hepatotoxicity)
 - amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin
- ▶ **Allopurinol** increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). [Moderate] Study
- ▶ **Antiepileptics (valproate)** increase the risk of adverse effects when given with pivmecillinam. Avoid. [Severe] Anecdotal
- ▶ Penicillins potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Lefunomide** is predicted to increase the exposure to benzylpenicillin. [Moderate] Theoretical
- ▶ Penicillins are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1447
- ▶ Piperacillin increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study

Penicillins (continued)

- ▶ **Nitisinone** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Study
- ▶ **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **flucloxacillin**. [Severe] Anecdotal → Also see TABLE 1 p. 1447
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Piperacillin** increases the effects of **suxamethonium**. [Moderate] Study
- ▶ **Terflunomide** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Study
- Pentamidine** → see TABLE 2 p. 1447 (nephrotoxicity), TABLE 9 p. 1449 (QT-interval prolongation)
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1447
- Pentazocine** → see opioids
- Pentostatin** → see TABLE 15 p. 1450 (myelosuppression), TABLE 5 p. 1448 (thromboembolism)
- ▶ **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 1450 → Also see TABLE 5 p. 1448
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1450

Pentoxifylline

- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study

Peppermint

- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

Perampanel → see antiepileptics

Pericyazine → see phenothiazines

Perindopril → see ACE inhibitors

Pertuzumab → see monoclonal antibodies

Pethidine → see opioids

Phenazone → see NSAIDs

Phenelzine → see MAOIs, irreversible

Phenindione → see TABLE 3 p. 1447 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Cephalosporins (cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **phenindione**. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **phenindione**. [Moderate] Study
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenindione**. [Moderate] Study

Phenobarbital → see antiepileptics**Phenothiazines** → see TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects), TABLE 10 p. 1449 (antimuscarinics)

chlorpromazine · fluphenazine · levomepromazine · pericyazine · prochlorperazine · promazine · trifluoperazine

FOOD AND LIFESTYLE **Chlorpromazine** and **fluphenazine** dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
- ▶ Oral **antacids** decrease the absorption of oral **phenothiazines**. [Moderate] Anecdotal
- ▶ **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 1449
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1448 → Also see TABLE 9 p. 1449 → Also see TABLE 10 p. 1449
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1448
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1449
- ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1448

- ▶ **Chlorpromazine** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **chlorpromazine**. [\[Moderate\]](#) Theoretical
- ▶ **Moclobemide** increases the risk of adverse effects when given with **levomepromazine**. [\[Moderate\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **chlorpromazine**. [\[Moderate\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **chlorpromazine**. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **chlorpromazine**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **chlorpromazine**. [\[Moderate\]](#) Theoretical → Also see **TABLE 9** p. 1449

Phenoxyethylpenicillin → see penicillins

Phenylephrine → see sympathomimetics, vasoconstrictor

Phenytoin → see antiepileptics

Pholcodine

- ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical

Phosphodiesterase type-4 inhibitors

- apremilast · roflumilast
- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to **apremilast**. Avoid. [\[Severe\]](#) Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **roflumilast**. [\[Moderate\]](#) Study
 - ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
 - ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **apremilast**. Avoid. [\[Severe\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **apremilast**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
- #### Phosphodiesterase type-5 inhibitors → see TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation)
- avanafil · sildenafil · tadalafil · vardenafil
- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [\[Severe\]](#) Study → Also see **TABLE 8** p. 1448
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors

- (sildenafil, vardenafil). [\[Moderate\]](#) Theoretical → Also see **TABLE 9** p. 1449
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1449
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see **TABLE 9** p. 1449
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1449
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see **TABLE 9** p. 1449
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 863. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1449
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1449
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical → Also see **TABLE 8** p. 1448
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study → Also see **TABLE 8** p. 1448
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical → Also see **TABLE 8** p. 1448
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see **TABLE 8** p. 1448
 - ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 863. [\[Severe\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1449

Phosphodiesterase type-5 inhibitors (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Endothelin receptor antagonists (bosentan)** decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 863. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 863. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 863. [\[Severe\]](#) Study → Also see TABLE 9 p. 1449
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1449
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1449
 - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [\[Moderate\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1448
 - ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 862. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 863. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1449
 - ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1448
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **NNRTIs (etravirine)** moderately decrease the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Ribiciclib** is predicted to increase the exposure to **sildenafil**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [\[Moderate\]](#) Theoretical
 - ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1448
 - ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1448
 - ▶ **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical
- Pibrentasvir**
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Study
 - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [\[Severe\]](#) Study

- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with **glecaprevir** increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with **ritonavir** increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **loperamide**. [Moderate] Study
 - ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with **glecaprevir** markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with **glecaprevir** moderately increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
 - ▶ **Pibrentasvir** with **glecaprevir** moderately increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 220. [Moderate] Study
 - ▶ **Pibrentasvir** with **glecaprevir** moderately increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
 - ▶ **Pibrentasvir** with **glecaprevir** slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
 - ▶ **Pibrentasvir** with **glecaprevir** increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Moderate] Study
 - ▶ **Pibrentasvir** with **glecaprevir** is predicted to increase the exposure to **topotecan**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- Pilocarpine**

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Pimecrolimus

- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
 - ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- Pimozide** → see TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects), TABLE 10 p. 1449 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1448
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1448 → Also see TABLE 9 p. 1449 → Also see TABLE 10 p. 1449
- ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1448
- ▶ **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Olaparib** might alter the exposure to **pimozide**. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study

Pindolol → see beta blockers, non-selective

Pioglitazone → see TABLE 14 p. 1450 (antidiabetic drugs)

- ▶ **Pioglitazone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study

Pioglitazone (continued)

- ▶ **St John's wort** slightly decreases the exposure to pioglitazone. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to pioglitazone. [Moderate] Study

Piperacillin → see penicillins

Piperaquine → see antimalarials

Pirfenidone

FOOD AND LIFESTYLE Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to pirfenidone. Avoid. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to pirfenidone. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study

Piroxicam → see NSAIDs

Pitolisant

- ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to antihistamines, non-sedating (fexofenadine). [Mild] Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of pitolisant. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mild] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **meglitinides (repaglinide)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mild] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of pitolisant. [Moderate] Theoretical
- ▶ **Mirtazapine** is predicted to decrease the efficacy of pitolisant. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **NNRTIs (efavirenz)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to pitolisant. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of pitolisant. [Mild] Theoretical
- ▶ **Venlafaxine** is predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Mild] Theoretical

Pivmecillinam → see penicillins

Pixantrone → see anthracyclines

Pizotifen → see antihistamines, sedating

Platinum compounds → see TABLE 15 p. 1450 (myelosuppression), TABLE 2 p. 1447 (nephrotoxicity), TABLE 19 p. 1451 (ototoxicity), TABLE 12 p. 1450 (peripheral neuropathy)

carboplatin - cisplatin - oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1450
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Polatuzumab vedotin → see monoclonal antibodies

Polymyxin b → see TABLE 2 p. 1447 (nephrotoxicity), TABLE 20 p. 1451 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **polymyxin B**, the possibility of interactions should be borne in mind.

Polystyrene sulfonate

SEPARATION OF ADMINISTRATION Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

- ▶ Oral **antacids** increase the risk of metabolic alkalosis when given with oral **polystyrene sulfonate**. [Severe] Anecdotal
- Pomalidomide** → see TABLE 15 p. 1450 (myelosuppression), TABLE 5 p. 1448 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1009. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1009. [Moderate] Study
- Ponatinib** → see TABLE 4 p. 1447 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Antiplateletics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1046. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1046. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ponatinib**. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ponatinib**. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1046. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1046. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1046. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ponatinib**. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical

- Posaconazole** → see antifungals, azoles
- Potassium aminobenzoate** → see TABLE 16 p. 1451 (increased serum potassium)
- ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [Severe] Theoretical
- Potassium canrenoate** → see TABLE 16 p. 1451 (increased serum potassium)
- Potassium chloride** → see TABLE 16 p. 1451 (increased serum potassium)
- Potassium citrate**
- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- Potassium-sparing diuretics** → see TABLE 18 p. 1451 (hyponatraemia), TABLE 16 p. 1451 (increased serum potassium)

amiloride · triamterene

- ▶ **Triamterene** potentially increases the clearance of **lithium**. [Moderate] Study
- Pramipexole** → see dopamine receptor agonists
- Prasugrel** → see TABLE 4 p. 1447 (antiplatelet effects)
- Pravastatin** → see statins
- Praziquantel**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **Antimalarials (chloroquine)** moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **Corticosteroids (dexamethasone)** decrease the exposure to **praziquantel**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** moderately increase the exposure to **praziquantel**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- Prazosin** → see alpha blockers
- Prednisolone** → see corticosteroids
- Pregabalin** → see antiepileptics
- Pridinolol** → see TABLE 10 p. 1449 (antimuscarinics)
- Prilocaine** → see anaesthetics, local
- Primaquine** → see antimalarials
- Primidone** → see antiepileptics
- Procarbazine** → see TABLE 15 p. 1450 (myelosuppression)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **procarbazine**. [Moderate] Anecdotal
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of

Procarbazine (continued)

hypersensitivity reactions when given with **procarbazine**.

[[Severe](#)] Anecdotal

- ▶ **Antiepileptics (fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with **procarbazine**. [[Severe](#)] Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [[Severe](#)] Theoretical

Prochlorperazine → see phenothiazines

Prochloridone → see TABLE 10 p. 1449 (antimuscarinics)

- ▶ **SSRIs (paroxetine)** slightly increase the exposure to **prochloridone**. Monitor and adjust dose. [[Moderate](#)] Study

Progestogen-only contraceptives

- ▶ **Lumacaftor** might decrease the efficacy of oral **progestogen-only contraceptives**. Use additional contraceptive precautions. [[Severe](#)] Theoretical

Proguanil → see antimalarials

Promazine → see phenothiazines

Propmethazine → see antihistamines, sedating

Propafenone → see antiarrhythmics

Propanteline → see TABLE 10 p. 1449 (antimuscarinics)

Propiverine → see TABLE 10 p. 1449 (antimuscarinics)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [[Moderate](#)] Theoretical
 - ▶ **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [[Moderate](#)] Theoretical
 - ▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [[Moderate](#)] Theoretical
 - ▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [[Moderate](#)] Theoretical
 - ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [[Moderate](#)] Theoretical
 - ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [[Moderate](#)] Theoretical
 - ▶ **Macrolides (clarithromycin)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [[Moderate](#)] Theoretical
- Propofol** → see TABLE 8 p. 1448 (hypotension), TABLE 11 p. 1449 (CNS depressant effects)
- ▶ **Antiepileptics (valproate)** potentially increase the concentration of **propofol**. Adjust dose. [[Severe](#)] Theoretical
- Propranolol** → see beta blockers, non-selective
- Propylthiouracil**
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metypalone**. Avoid. [[Moderate](#)] Theoretical
- Proton pump inhibitors**
- esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [[Moderate](#)] Study
 - ▶ **Pantoprazole** is predicted to increase the exposure to **alpelisib**. [[Moderate](#)] Theoretical
 - ▶ **Anti-androgens (apalutamide)** markedly decrease the exposure to **omeprazole**. Avoid or monitor. [[Moderate](#)] Study
 - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to proton pump inhibitors (lansoprazole, rabeprazole). Avoid or monitor. [[Mild](#)] Study
 - ▶ **Antifungals, azoles (voriconazole)** increase the exposure to proton pump inhibitors (**esomeprazole, omeprazole**). Adjust dose. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [[Moderate](#)] Study

- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** oral suspension. Avoid. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** potentially increase the exposure to **benzodiazepines (clobazam)**. Adjust dose. [[Moderate](#)] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [[Moderate](#)] Study
 - ▶ **Esomeprazole** is predicted to increase the exposure to **cannabidiol**. [[Moderate](#)] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [[Moderate](#)] Theoretical
 - ▶ **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [[Moderate](#)] Theoretical
 - ▶ **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 249. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **daclotizine**. Avoid. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dasatinib**. Avoid. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [[Moderate](#)] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **erlotinib**. Avoid. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [[Severe](#)] Theoretical
 - ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 672. [[Moderate](#)] Theoretical
 - ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 672, sofosbuvir with velpatasvir p. 673, and sofosbuvir with velpatasvir and voxilaprevir p. 674. [[Moderate](#)] Study
 - ▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram)**. Monitor and adjust dose. [[Severe](#)] Theoretical
 - ▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram)**. Monitor and adjust dose. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [[Severe](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 673. [[Moderate](#)] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 674. [[Moderate](#)] Study
- Proxymetacaine** → see anaesthetics, local
- Pseudoephedrine** → see sympathomimetics, vasoconstrictor
- Pyrazinamide**
- ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [[Moderate](#)] Theoretical
- Pyridostigmine** → see TABLE 6 p. 1448 (bradycardia)
- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [[Moderate](#)] Theoretical
- Pyrimethamine** → see antimalarials
- Quetiapine** → see antipsychotics, second generation
- Quinagolide** → see dopamine receptor agonists
- Quinapril** → see ACE inhibitors

Quinine → see antimalarials

Quinolones → see TABLE 9, p. 1449 (QT-interval prolongation)

ciprofloxacin · delafloxacin · levofloxacin · moxifloxacin · ofloxacin

- ▶ Avoid concurrent administration of dairy products and mineral-fortified drinks with *oral* **ciprofloxacin** due to reduced exposure.
 - ▶ Since systemic absorption can follow topical application of **ciprofloxacin**, **levofloxacin**, and **ofloxacin**, the possibility of interactions should be borne in mind.
 - ▶ Interactions do not generally apply to topical use of **moxifloxacin** unless specified.
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
 - ▶ Oral **antacids** decrease the absorption of oral **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
 - ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [Mid] Study
 - ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Ciprofloxacin** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
 - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [Moderate] Study
 - ▶ **Ciprofloxacin** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1034. [Severe] Theoretical
 - ▶ Oral **iron** decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum. [Moderate] Study
 - ▶ **Lefunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Ciprofloxacin** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal
 - ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
 - ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1009. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
 - ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
 - ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 711. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 507. [Moderate] Theoretical
 - ▶ **Ciprofloxacin** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- Rabeprazole** → see proton pump inhibitors
- Rabies immunoglobulin** → see immunoglobulins
- Rabies vaccine**
- ▶ **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine** (intradermal). Avoid. [Moderate] Study
 - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
- Raloxifene** → see TABLE 5, p. 1448 (thromboembolism)
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [Severe] Theoretical
 - ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical
- Raltegravir**
- ▶ Oral **antacids** decrease the exposure to oral **raltegravir**. Avoid. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
 - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
 - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
 - ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- Raltitrexed** → see TABLE 15, p. 1450 (myelosuppression)
- ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study

Raltitrexed (continued)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with raltitrexed. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Ramipril → see ACE inhibitors

Ramucicromab → see monoclonal antibodies

Ranibizumab

- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (argatroban)**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (bivalirudin)**. [Moderate] Theoretical

Ranitidine → see H₂ receptor antagonists

Ranolazine → see TABLE 9 p. 1449 (QT-interval prolongation)

▶ **Ranolazine** is predicted to increase the exposure to **afatinib**.

Separate administration by 12 hours. [Moderate] Study

▶ **Ranolazine** is predicted to increase the exposure to **alsikiren**.

[Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449

▶ **Antiarrhythmics (dronedronone)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1449

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study

▶ **Antifungals, azoles (flucanazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1449

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid.

[Severe] Study → Also see TABLE 9 p. 1449

▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study

▶ **Ranolazine** is predicted to increase the exposure to **bictegrovir**.

Use with caution or avoid. [Moderate] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. [Severe] Study

▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical

▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**.

Avoid. [Severe] Study

▶ **Ranolazine** is predicted to increase the exposure to **colchicine**.

Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1175. [Severe] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**.

[Severe] Study → Also see TABLE 9 p. 1449

▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study

▶ **Ranolazine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study

▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**.

[Moderate] Theoretical

▶ **Ranolazine** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical

▶ **Ranolazine** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical

▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

▶ **Ranolazine** is predicted to increase the exposure to **gilteritinib**.

[Moderate] Theoretical

▶ **Grapefruit** juice is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study

▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**.

Avoid. [Severe] Study

▶ **Imatinib** is predicted to increase the exposure to **ranolazine**.

[Severe] Study

▶ **Ranolazine** is predicted to increase the exposure to

larotrectinib. [Mild] Theoretical

▶ **Letermovir** is predicted to increase the exposure to **ranolazine**.

[Severe] Study

▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**.

Separate administration by 12 hours. [Mild] Theoretical

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449

▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1449

▶ **Mitotane** is predicted to decrease the exposure to **ranolazine**.

Avoid. [Severe] Study

▶ **Ranolazine** is predicted to increase the exposure to

naldemedine. [Moderate] Study

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ranolazine**. [Severe] Study

▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**.

[Severe] Study → Also see TABLE 9 p. 1449

▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**.

[Moderate] Study

▶ **Ranolazine** is predicted to increase the exposure to

panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1449

▶ **Ranolazine** is predicted to increase the exposure to

pibrentasvir. [Moderate] Theoretical

▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study

▶ **St John's wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study

▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical

▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 221. [Moderate] Study

▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal

▶ **Ranolazine** is predicted to slightly increase the exposure to

talazoparib. Avoid or adjust talazoparib dose, p. 1059. [Severe] Study

▶ **Ranolazine** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical

▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**.

Use with caution or avoid. [Severe] Study

▶ **Ranolazine** might increase the exposure to **tigecycline**. [Mild] Anecdotal

▶ **Ranolazine** is predicted to increase the exposure to **topotecan**.

[Severe] Study

▶ **Ranolazine** is predicted to increase the concentration of

trametinib. [Moderate] Theoretical

▶ **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1449

▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**.

Avoid or monitor for toxicity. [Severe] Theoretical

▶ **Ranolazine** might increase the exposure to **vinca alkaloids**.

[Severe] Theoretical → Also see TABLE 9 p. 1449

Rasagiline → see MAO-B inhibitors

Reboxetine

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **reboxetine**. Avoid.

[Moderate] Study

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of reboxetine. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- Regorafenib** → see TABLE 15 p. 1450 (myelosuppression), TABLE 4 p. 1447 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to regorafenib. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to regorafenib. [Severe] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to regorafenib. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Letermovir** is predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Mitotane** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to regorafenib. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to regorafenib. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to regorafenib. [Severe] Study
 - ▶ **NSAIDs (mefenamic acid)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1447
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to regorafenib. Avoid. [Severe] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin)**. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 220. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1450
- Remdesivir**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** potentially decrease the exposure to remdesivir. Avoid. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** potentially decrease the exposure to remdesivir. Avoid. [Moderate] Theoretical
 - ▶ **Antimalarials (chloroquine)** potentially decrease the effects of remdesivir. Avoid. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** potentially decrease the effects of remdesivir. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** potentially decreases the exposure to remdesivir. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** potentially decrease the exposure to remdesivir. Avoid. [Moderate] Theoretical
- Remifentanyl** → see opioids
- Repaglinide** → see meglitinides
- Retigabine** → see antiepileptics
- Retinoids** → see TABLE 15 p. 1450 (myelosuppression), TABLE 5 p. 1448 (thromboembolism)
- acitretin • adapalene • alitretinoin • bexarotene • isotretinoin • tazarotene • tretinoin
- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
 - ▶ Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.
- ▶ **Alcohol** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. [Moderate] Study
 - ▶ **Clopidogrel** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Fibrates (gemfibrozil)** increase the concentration of bexarotene. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1315. [Moderate] Theoretical

Retinoids (continued)

- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ Retinoids (**acitretin**, **alitretinoin**, **isotretinoin**, **tretinoin**) increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ Retinoids (**acitretin**, **alitretinoin**, **isotretinoin**, **tretinoin**) increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- ▶ **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ Retinoids (**acitretin**, **alitretinoin**, **isotretinoin**) are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Ribavirin

- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **NRTIs (zidovudine)**. Avoid. [Severe] Study

Ribociclib → see TABLE 15 p. 1450 (myelosuppression), TABLE 9 p. 1449 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ **Antiarthritics (dronedarone)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1048. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** moderately increases the exposure to **benzodiazepines (midazolam)**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1048. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1048. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1048. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1450

- ▶ **Letermovir** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1048. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1450
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1450 → Also see TABLE 9 p. 1449
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Ribociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Ribociclib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
 - ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
 - ▶ **Ribociclib** is predicted to increase the exposure to **statins (pravastatin, rosuvastatin)**. [Moderate] Theoretical
 - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Moderate] Theoretical
 - ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- Rifabutin** → see rifamycins
Rifampicin → see rifamycins
Rifamycins

rifabutin · rifampicin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Rifampicin** is predicted to decrease the exposure to **5-HT₃-receptor antagonists (ondansetron)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **alsikiren**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to antiarrhythmics (**disopyramide, dronedarone**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of antiarrhythmics (**propafenone**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to anticholinesterases, centrally acting (**donepezil**). [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to rifampicin and rifampicin is predicted to decrease the exposure to antiepileptics (**phenobarbital, primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to antiepileptics (**brivaracetam**). Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of antiepileptics (**lamotrigine**). Adjust lamotrigine dose, p. 338. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with rifabutin. Adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of rifabutin and rifabutin decreases the concentration of antifungals, azoles (**itraconazole, posaconazole**). Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of rifabutin and rifabutin is predicted to decrease the concentration of antifungals, azoles (**ketoconazole**). Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of rifabutin. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to antifungals, azoles (**fluconazole**). Adjust dose. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping rifampicin. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to antifungals, azoles (**ketoconazole**) and antifungals, azoles (**ketoconazole**) potentially decrease the exposure to rifampicin. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antifungals, azoles (**posaconazole**). Avoid. [Moderate] Anecdotal
- ▶ **Rifabutin** decreases the concentration of antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the concentration of rifabutin. Avoid or adjust voriconazole dose, p. 644. [Severe] Study
- ▶ **Rifampicin** very markedly decreases the exposure to antifungals, azoles (**voriconazole**). Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antihistamines, non-sedating (**bilastine**). [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of antihistamines, non-sedating (**exfenadine**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antimalarials (**artemether**) with lumefantrine. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to antimalarials (**atovaquone**). Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to antimalarials (**atovaquone**) and antimalarials (**atovaquone**) slightly increase the exposure to rifampicin. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to antimalarials (**mefloquine**). [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of antimalarials (**piperaquine**). Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to antimalarials (**quinine**). [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to antipsychotics, second generation (**aripiprazole**). Adjust aripiprazole dose, p. 418. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the exposure to antipsychotics, second generation (**clozapine**). [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation (**lurasidone**). Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation (**olanzapine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation (**paliperidone**). Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation (**quetiapine**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation (**risperidone**). Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to benzodiazepines (**alprazolam**). Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to benzodiazepines (**chlordiazepoxide**). [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to benzodiazepines (**diazepam**). Avoid. [Moderate] Study
- ▶ **Rifampicin** increases the clearance of benzodiazepines (**lorazepam, nitrazepam**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to benzodiazepines (**midazolam**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to beta blockers, non-selective (**carvedilol**). [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to beta blockers, non-selective (**propranolol**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to beta blockers, selective (**bisoprolol, metoprolol**). [Mild] Study
- ▶ **Rifampicin** moderately decreases the exposure to beta blockers, selective (**celiprolol**). [Moderate] Study
- ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** greatly decreases the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study

Rifamycins (continued)

- ▶ **Rifampicin** moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 637. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **colimetinib**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins** decrease the exposure to **dapsone**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **difenogest**. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (linagliptin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Rifampicin** transiently increases the exposure to **endothelin receptor antagonists (ambrisentan)**. [Moderate] Study
- ▶ **Rifampicin** affects the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1030. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 375. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **HIV-protease inhibitors (ritonavir)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Theoretical
- ▶ **Rifabutin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** increase the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** moderately decreases the exposure to **NNRTIs (doravirine)**. Adjust doravirine p. 686 or lamivudine with tenofovir disoproxil and doravirine p. 696 dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **NNRTIs (efavirenz)**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** decreases the exposure to **NNRTIs (etravirine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **NNRTIs (nevirapine)**. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to **NNRTIs (rilpivirine)**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study

Rifamycins (continued)

- ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** potentially decreases the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **sodium glucose co-transporter 2 inhibitors (canagliflozin)**. Adjust **canagliflozin** dose, p. 745. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to **statins (atorvastatin)**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** very markedly decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [Unknown] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **tensirolimus**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Terflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** modestly decreases the exposure to **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tezacافتor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Rifampicin** might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **treprostinil**. Adjust dose. [Mild] Study
- ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
- ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **zolpidem**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Rifaximin

- ▶ **Ciclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study

Rilpivirine → see NNRTIs**Riluzole**

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **riluzole**. [Moderate] Theoretical

- ▶ **Vemurafenib** is predicted to increase the exposure to **riluzole**.
[Moderate] Theoretical
- Riociguat** → see TABLE 8 p. 1448 (hypotension)
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking is started or stopped during treatment.
- ▶ Oral **antacids** decrease the exposure to oral **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 199. [Moderate] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 199. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1448
- Risankizumab** → see monoclonal antibodies
- Risedronate** → see bisphosphonates
- Risperidone** → see antipsychotics, second generation
- Ritonavir** → see HIV-protease inhibitors
- Rituximab** → see monoclonal antibodies
- Rivaroxaban** → see factor XA inhibitors
- Rivastigmine** → see anticholinesterases, centrally acting
- Rizatriptan** → see triptans
- Rocuronium** → see neuromuscular blocking drugs, non-depolarising
- Roflumilast** → see phosphodiesterase type-4 inhibitors
- Ropinirole** → see dopamine receptor agonists
- Ropivacaine** → see anaesthetics, local
- Rosuvastatin** → see statins
- Rotavirus vaccine** → see live vaccines
- Rotigotine** → see dopamine receptor agonists
- Rucaparib** → see TABLE 15 p. 1450 (myelosuppression)
- ▶ **Rucaparib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Rucaparib** slightly increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **duloxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Rucaparib** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study → Also see TABLE 15 p. 1450
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rucaparib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **topotecan**. [Severe] Study → Also see TABLE 15 p. 1450
- ▶ **Rucaparib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 507. [Moderate] Theoretical
- ▶ **Rucaparib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1450
- Rufinamide** → see antiepileptics
- Rupatadine** → see antihistamines, non-sedating
- Ruxolitinib** → see TABLE 15 p. 1450 (myelosuppression), TABLE 4 p. 1447 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **ruxolitinib**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical

Ruxolitinib (continued)

▶ **HIV-protease inhibitors** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor adverse effects. [Moderate] Study

▶ **Idelalisib** is predicted to increase the exposure to ruxolitinib. Adjust dose and monitor adverse effects. [Moderate] Study

▶ **Imatinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Study → Also see TABLE 15 p. 1450

▶ **Letermovir** is predicted to increase the exposure to ruxolitinib. [Moderate] Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor adverse effects. [Moderate] Study

▶ **Macrolides (erythromycin)** slightly increase the exposure to ruxolitinib. [Mild] Study

▶ **Mitotane** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1450

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to ruxolitinib. [Moderate] Study

▶ **Nilotinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Study → Also see TABLE 15 p. 1450

▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study

▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study

▶ **St John's wort** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study

Sacubitril → see TABLE 8 p. 1448 (hypotension)

Safinamide → see MAO-B inhibitors

Salbutamol → see beta₂ agonists

Salmeterol → see beta₂ agonists

Sapropterin → see TABLE 8 p. 1448 (hypotension)

▶ **Methotrexate** is predicted to decrease the efficacy of sapropterin. [Moderate] Theoretical

▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with sapropterin. [Moderate] Theoretical → Also see TABLE 8 p. 1448

▶ **Trimethoprim** is predicted to decrease the efficacy of sapropterin. [Moderate] Theoretical

Sarilumab → see monoclonal antibodies

Saxagliptin → see dipeptidylpeptidase-4 inhibitors

Secukinumab → see monoclonal antibodies

Selegiline → see MAO-B inhibitors

Selenium

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

▶ Oral selenium is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after selenium. [Severe] Theoretical

Selexipag

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study

▶ **Antiepileptics (valproate)** are predicted to increase the exposure to selexipag. [Unknown] Theoretical

▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to selexipag. [Unknown] Theoretical

▶ **Clopidogrel** is predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 197. [Moderate] Study

▶ **Fibrates (gemfibrozil)** increase the exposure to selexipag. Avoid. [Severe] Study

▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 197. [Moderate] Study

▶ **Leflunomide** is predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 197. [Moderate] Study

▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study

▶ **Teriflunomide** is predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 197. [Moderate] Study

Semaglutide → see glucagon-like peptide-1 receptor agonists

Sertraline → see SSRIs

Sevelamer

SEPARATION OF ADMINISTRATION Drugs for which a reduction in bioavailability could be clinically important should be administered at least 1 hour before, or 3 hours after, sevelamer; alternatively consider monitoring blood concentrations.

Sevoflurane → see volatile halogenated anaesthetics

Sildenafil → see phosphodiesterase type-5 inhibitors

Siltuximab → see monoclonal antibodies

Silver sulfadiazine

PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

Simvastatin → see statins

Siponimod → see TABLE 6 p. 1448 (bradycardia), TABLE 9 p. 1449 (QT-interval prolongation)

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to siponimod. [Severe] Study

▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1448

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to siponimod. [Severe] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1448

▶ **Cobicistat** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1448

▶ **Dabrafenib** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical

▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

▶ **Idelalisib** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

▶ **Imatinib** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study

▶ **Letermovir** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study

▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid and for 4 weeks after stopping siponimod. [Severe] Theoretical

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

▶ **Macrolides (erythromycin)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study

▶ **Mitotane** is predicted to decrease the exposure to siponimod. [Severe] Study

- ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
 - ▶ **NRRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- Sirolimus**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
 - ▶ **Antiarrhythmics (dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Theoretical
 - ▶ **Entrectinib** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
 - ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **sirolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Ivacafator** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
 - ▶ **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Letermovir** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
 - ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Neratinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **NRRTIs (doravirine)** are predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 890. [Moderate] Theoretical
 - ▶ **NRRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Olaparib** might increase the exposure to **sirolimus**. [Moderate] Theoretical
 - ▶ **Osimertinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Severe] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
- Sitagliptin** → see dipeptidylpeptidase-4 inhibitors
- Sodium bicarbonate**

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **sodium bicarbonate** unless specified.

Sodium bicarbonate (continued)

- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals, azoles (ketoconazole)**. [Moderate] Study
- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mid] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical

Sodium citrate

- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical

Sodium glucose co-transporter 2 inhibitors → see TABLE 14 p. 1450 (antidiabetic drugs), TABLE 8 p. 1448 (hypotension)

canagliflozin · dapagliflozin · empagliflozin · ertugliflozin

- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 745. [Moderate] Study
- Sodium oxybate** → see TABLE 8 p. 1448 (hypotension), TABLE 11 p. 1449 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 516. [Moderate] Study

Sodium phenylbutyrate

- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal

Sodium picosulfate → see TABLE 18 p. 1451 (hyponatraemia)**Sodium zirconium cyclosilicate**

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **NNRTIs (rilipivirine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical

Sofosbuvir

- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 672, sofosbuvir with velpatasvir p. 673, and sofosbuvir with velpatasvir and voxilaprevir p. 674. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 672, sofosbuvir with velpatasvir p. 673, and sofosbuvir with velpatasvir and voxilaprevir p. 674. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

Solifenacin → see TABLE 10 p. 1449 (antimuscarinics)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 826 or tamsulosin with solifenacin p. 832 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 826 or tamsulosin with solifenacin p. 832 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 826 or tamsulosin with solifenacin p. 832 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 826 or tamsulosin with solifenacin p. 832 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 826 or tamsulosin with solifenacin p. 832 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical

Solriamfetol

- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. [Severe] Theoretical

- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

Somatropin

- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical

Sorafenib → see TABLE 15 p. 1450 (myelosuppression), TABLE 9 p. 1449 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Dabrafenib** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- Sotalol** → see beta blockers, non-selective
- Spironolactone** → see aldosterone antagonists
- SSRIs** → see TABLE 18 p. 1451 (hyponatraemia), TABLE 13 p. 1450 (serotonin syndrome), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 4 p. 1447 (antiplatelet effects)
 - citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline
- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1450
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1447
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **citalopram**. Avoid or monitor. [Mid] Study → Also see TABLE 9 p. 1449
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [Moderate] Study
- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 870. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of **SSRIs**. [Moderate] Anecdotal
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 418. [Moderate] Study
- ▶ **Fluvoxamine** increases the exposure to **antipsychotics, second generation (asenapine)**. [Moderate] Study
- ▶ **Paroxetine** moderately increases the exposure to **antipsychotics, second generation (asenapine)**. [Moderate] Study
- ▶ **Fluvoxamine** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Severe] Anecdotal
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to **benzodiazepines (clobazam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (diazepam)**. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 249. [Moderate] Theoretical → Also see TABLE 4 p. 1447
- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1447
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 870. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mid] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450 → Also see TABLE 4 p. 1447
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

SSRIs (continued)

- ▶ **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Milid] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **gefatinib**. [Moderate] Theoretical
- ▶ **Gilteritinib** is predicted to decrease the efficacy of SSRIs (**escitalopram, fluoxetine, sertraline**). Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram, escitalopram**). Adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine, sertraline**). [Moderate] Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 870. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 870. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Milid] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 870. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine, fluvoxamine, paroxetine**) are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 13 p. 1450
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 870. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1450
- ▶ SSRIs might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1009. [Moderate] Study
- ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to SSRIs (**dapoxetine**). [Moderate] Theoretical → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450 → Also see TABLE 4 p. 1447
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to SSRIs (**escitalopram**). Use with caution and adjust dose. [Severe] Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450 → Also see TABLE 4 p. 1447
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
- ▶ **Fluvoxamine** very slightly increases the exposure to **talazoparib**. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to SSRIs (**citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline**). [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine, fluvoxamine**) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1163. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450
- ▶ **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450
- ▶ **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450
- ▶ **Fluvoxamine** increases the concentration of **triptans (frovatriptan)**. [Severe] Study → Also see TABLE 13 p. 1450
- ▶ **Fluvoxamine** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 507. [Severe] Theoretical → Also see TABLE 13 p. 1450

- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate]
- ▶ Study → Also see TABLE 13 p. 1450 → Also see TABLE 4 p. 1447
- St John's wort** → see TABLE 13 p. 1450 (serotonin syndrome)
- ▶ **St John's wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
- ▶ **St John's wort** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mid] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (alprazolam)**. [Moderate] Study
- ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mid] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the efficacy of **combined hormonal contraceptives**. Mhra advises avoid. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **St John's wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **desogestrel**. Mhra advises avoid. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Theoretical
- ▶ **St John's wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **St John's wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mid] Study
- ▶ **St John's wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **etonogestrel**. Mhra advises avoid. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **factor Xa inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **factor Xa inhibitors (edoxaban)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **factor Xa inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **figolimod**. Avoid. [Moderate] Theoretical

St John's wort (continued)

- ▶ St John's wort is predicted to decrease the exposure to **gefintinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1056. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **imatinitib**. [Moderate] Study
- ▶ St John's wort slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ St John's wort decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **NRRTIs (doravirine, rilpivirine)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the concentration of **NRRTIs (efavirenz, nevirapine)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **NRRTIs (etravirine)**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ St John's wort is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ St John's wort decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1450
- ▶ St John's wort moderately decreases the exposure to **opioids (oxycodone)**. Adjust dose. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **osimertinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **pazopanib**. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ St John's wort slightly decreases the exposure to **pioglitazone**. [Mild] Study
- ▶ St John's wort is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **regorafenib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ruoxitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
- ▶ St John's wort decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ St John's wort potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ St John's wort is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ St John's wort might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. [Mild] Theoretical
 - ▶ **St John's wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
 - ▶ **St John's wort** is predicted to decrease the exposure to **vandetanib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine)**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Statins** → see TABLE 1 p. 1447 (hepatotoxicity)
- atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin
- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [Severe] Theoretical
 - ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
 - ▶ Oral **antacids** decrease the absorption of oral **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **atorvastatin**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide)** slightly decrease the exposure to **rosuvastatin**. [Mild] Study
 - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **simvastatin**. Avoid or monitor. [Moderate] Study
 - ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. Avoid. [Severe] Theoretical
 - ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
 - ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **statins (pravastatin, simvastatin)**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Severe] Study
 - ▶ **Antiarrhythmics (dronedaron)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Antiarrhythmics (dronedaron)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
 - ▶ **Antiarrhythmics (dronedaron)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Antiepileptics (eslicarbazepine)** decrease the exposure to **rosuvastatin**. [Moderate] Study
 - ▶ **Antiepileptics (phenytoin)** moderately decrease the exposure to **atorvastatin**. [Moderate] Study
 - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **simvastatin**. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenobarbital, primidone)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
 - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **atorvastatin**. [Moderate] Study
 - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1447
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 1447
 - ▶ **Antifungals, azoles (miconazole)** (including the oral gel) might increase the exposure to **atorvastatin**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (miconazole)** (including the oral gel) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Anecdotal
 - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid. [Severe] Anecdotal
 - ▶ **Antifungals, azoles (posaconazole)** markedly to very markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1447
 - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **statins (fluvastatin, rosuvastatin)**. [Moderate] Theoretical
 - ▶ **Bemepidoic acid** increases the exposure to **pravastatin**. [Moderate] Study
 - ▶ **Bemepidoic acid** increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Moderate] Study
 - ▶ **Calcium channel blockers (amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Mild] Study
 - ▶ **Calcium channel blockers (diltiazem)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the concentration of **statins**. [Moderate] Theoretical
 - ▶ **Ciclosporin** markedly to very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 218. [Severe] Study
 - ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
 - ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [Severe] Study
 - ▶ **Ciclosporin** markedly increases the exposure to **rosuvastatin**. Avoid. [Severe] Study
 - ▶ **Ciclosporin** markedly to very markedly increases the exposure to **simvastatin**. Avoid. [Severe] Study
 - ▶ **Cilostazol** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
 - ▶ **Cilostazol** slightly increases the exposure to **simvastatin**. [Moderate] Study
 - ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 220. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study

Statins (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** has been reported to cause rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pravastatin**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir slightly increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 218. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 219. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 220. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Moderate] Theoretical
- ▶ **Elexacaftor** is predicted to increase the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 220. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 221. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust **fenofibrate** dose, p. 215. [Severe] Anecdotal
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Use with caution and adjust **fenofibrate** dose, p. 215. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 215, p. 220. [Severe] Anecdotal
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **fenofibrate** dose, p. 215. [Severe] Anecdotal
- ▶ **Fibrates (gemfibrozil)** increase the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Fligotinib** is predicted to increase the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Fostamatinib** slightly increases the exposure to **rosuvastatin**. [Moderate] Study
- ▶ **Fostamatinib** slightly increases the exposure to **simvastatin**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Fusidate** has been reported to cause rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Glecaprevir** with pibrentasvir markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Glecaprevir** with pibrentasvir is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 219. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 220. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** moderately increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 218. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 219. [Moderate] Theoretical
- ▶ **Grazoprevir** with elbasvir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 220. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** might affect the exposure to **pravastatin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust **rosuvastatin** dose, p. 220. [Severe] Study
- ▶ **HIV-protease inhibitors (darunavir, ritonavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** are predicted to increase the exposure to **rosuvastatin**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Anecdotal
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **rosuvastatin**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Leflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 218. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. [Moderate] Theoretical

- ▶ **Letermovir** is predicted to increase the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [Severe] Study
 - ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 224. [Mid] Study → Also see TABLE 1 p. 1447
 - ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 221. [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **pravastatin**. [Severe] Study
 - ▶ **Macrolides (erythromycin)** markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
 - ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
 - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Nicotinic acid** might increase the risk of rhabdomyolysis when given with statins. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **NNRTIs (etravirine)** slightly decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **NNRTIs (etravirine)** are predicted to increase the exposure to **fluvastatin**. Adjust dose. [Severe] Theoretical
 - ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **simvastatin**. Adjust dose. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
 - ▶ **Olaparib** is predicted to increase the exposure to statins. [Moderate] Theoretical
 - ▶ **Osimertinib** causes a small increase in the exposure to **rosuvastatin**. [Severe] Study
 - ▶ **Pazopanib** might cause increased ALT concentrations when given with **simvastatin**. [Moderate] Study
 - ▶ **Pazopanib** might affect the exposure to statins (**atorvastatin, pravastatin, rosuvastatin**). [Moderate] Theoretical
 - ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 219. [Moderate] Study
 - ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 220. [Moderate] Study
 - ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **simvastatin**. Avoid. [Moderate] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
 - ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 220. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin**). [Moderate] Study
 - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. [Moderate] Theoretical
 - ▶ **Ribociclib** is predicted to increase the exposure to statins (**pravastatin, rosuvastatin**). [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **atorvastatin**. Manufacturer advises take both drugs at the same time. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** very markedly decrease the exposure to **simvastatin**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
 - ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas (glibenclamide)**. [Mid] Study
 - ▶ **Atorvastatin** very slightly increases the exposure to **talazoparib**. [Moderate] Study
 - ▶ **Tedizolid** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). Avoid. [Moderate] Study
 - ▶ **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 220. [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Teriflunomide** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, pravastatin, simvastatin**). [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Ticagrelor** slightly to moderately increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 221. [Moderate] Study
 - ▶ **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. [Moderate] Theoretical
 - ▶ **Velpatasvir** with sofosbuvir slightly increases the exposure to **atorvastatin**. [Severe] Study
 - ▶ **Velpatasvir** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor adverse effects, p. 220. [Severe] Study
 - ▶ **Velpatasvir** with sofosbuvir is predicted to increase the exposure to statins (**fluvastatin, simvastatin**). Monitor adverse effects and adjust dose. [Severe] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **atorvastatin**. [Moderate] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to statins (**fluvastatin, pravastatin, rosuvastatin, simvastatin**). [Moderate] Theoretical
 - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 218. [Moderate] Theoretical
 - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 219. [Moderate] Study
 - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to **rosuvastatin**. Avoid. [Severe] Study
 - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to statins (**fluvastatin, simvastatin**). Avoid. [Moderate] Theoretical
 - ▶ **Stiripentol** → see antiepileptics
 - ▶ **Streptokinase** → see TABLE 3 p. 1447 (anticoagulant effects)
 - ▶ **Streptomycin** → see aminoglycosides
 - ▶ **Streptozocin** → see TABLE 1 p. 1447 (hepatotoxicity), TABLE 15 p. 1450 (myelosuppression), TABLE 2 p. 1447 (nephrotoxicity)
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Strontium** → see TABLE 5 p. 1448 (thromboembolism)
 - ▶ Oral **antacids** decrease the absorption of oral **strontium**. Separate administration by 2 hours. [Moderate] Study
 - ▶ Oral **calcium salts** decrease the exposure to **strontium**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
 - ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical
- ### Sucralfate
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical

Sucralfate (continued)

- ▶ **Sucralfate** potentially decreases the effects of **coumarins (warfarin)**. Separate administration by 2 hours. [Moderate] Anecdotal
- ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sucralfate** decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study

Sugammadex

- ▶ **Sugammadex** is predicted to decrease the exposure to **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see TABLE 1 p. 1447 (hepatotoxicity), TABLE 15 p. 1450 (myelosuppression)

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **sulfasalazine**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1447 → Also see TABLE 15 p. 1450
- ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1450
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [Severe] Theoretical

Sulfonamides

sulfadiazine · sulfadoxine · sulfamethoxazole

- ▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Anecdotal
- ▶ **Sulfadiazine** is predicted to increase the concentration of **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfadiazine** increases the concentration of **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **sulfonamides**. [Severe] Study
- ▶ **Chlorprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [Severe] Theoretical
- ▶ **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonyleureas**. [Moderate] Study
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical

Sulfonyleureas → see TABLE 14 p. 1450 (antidiabetic drugs)

glibenclamide · gliclazide · gliimepiride · glipizide · tolbutamide

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **gliimepiride**. Adjust dose. [Moderate] Theoretical
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonyleureas**. [Severe] Study
- ▶ **Elxacaftor** is predicted to increase the exposure to **glibenclamide**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** increase the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonyleureas**. [Moderate] Theoretical
- ▶ **Filgotinib** is predicted to increase the exposure to **glibenclamide**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonyleureas**. [Moderate] Theoretical
- ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonyleureas**. Monitor blood glucose and adjust dose. [Severe] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **sulfonyleureas (gliimepiride, tolbutamide)**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sulfonyleureas**. [Moderate] Study
- ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [Mild] Study

- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **gabapentin**. [Moderate] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **gabapentin**. [Moderate] Theoretical
 - Sulindac** → see NSAIDs
 - Sulpiride** → see TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects)
 - ▶ Oral **antacids** decrease the absorption of oral **sulpiride**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1448 → Also see TABLE 9 p. 1449
 - ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1448
 - ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1449
 - ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
 - Sumatriptan** → see triptans
 - Sunitinib** → see TABLE 15 p. 1450 (myelosuppression), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 4 p. 1447 (antiplatelet effects)
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Letermovir** is predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 1450 → Also see TABLE 9 p. 1449
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1051. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Sunitinib** has been reported to cause hypothyroidism when given with **thyroid hormones (levothyroxine)**. [Moderate] Anecdotal
 - Suxamethonium** → see TABLE 20 p. 1451 (neuromuscular blocking effects)
 - ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
 - ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
 - ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal
 - ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [Severe] Anecdotal
 - ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
 - ▶ **Intravenous magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
- ### Sympathomimetics, inotropic
- dobutamine · dopamine
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
 - ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
 - ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
 - ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
 - ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical

Sympathomimetics, inotropic (continued)

- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [\[Moderate\]](#) Theoretical

Sympathomimetics, vasoconstrictor

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **phenylephrine** and **xylometazoline**, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of adverse effects when given with **aminophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [\[Severe\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Severe\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Severe\]](#) Study
- ▶ **Isometheptene** potentially increases the risk of adverse effects when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Moderate\]](#) Study
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [\[Severe\]](#) Anecdotal
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Study
- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study
- ▶ **Mianserin** decreases the effects of **ephedrine**. [\[Severe\]](#) Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [\[Severe\]](#) Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Severe\]](#) Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** might increase the risk of a hypertensive crisis when given with **ozanimod**. [\[Severe\]](#) Theoretical
- ▶ **Ephedrine** increases the risk of adverse effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of ephedrine. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine**). Avoid. [\[Severe\]](#) Study

Tacalcitol → see vitamin D substances

Tacrolimus → see TABLE 2 p. 1447 (nephrotoxicity), TABLE 16 p. 1451 (increased serum potassium)

- ▶ Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Tacrolimus** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study → Also see TABLE 2 p. 1447 → Also see TABLE 16 p. 1451
- ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Glecaprevir** with pibrentasvir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mid\]](#) Study
- ▶ **Grapefruit** juice greatly increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [\[Mid\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

tacrolimus. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **NNRTIs (doravirine)** are predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 891. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Olaparib** might alter the exposure to **tacrolimus**. [Moderate] Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
 - ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
 - ▶ **St John's wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
 - ▶ **Tacrolimus** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
 - ▶ **Tigecycline** has been reported to increase the concentration of **tacrolimus**. [Severe] Anecdotal
 - ▶ **Tacrolimus** increases the exposure to **tofacinib**. Avoid. [Severe] Study
 - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
- Tadalafil** → see phosphodiesterase type-5 inhibitors
- Talazoparib** → see TABLE 15 p. 1450 (myelosuppression)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Beta blockers, non-selective (carvedilol)** cause a small increase in the bioavailability of **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Moderate] Study

- ▶ **Calcium channel blockers (diltiazem, felodipine)** very slightly increase the exposure to **talazoparib**. [Moderate] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Moderate] Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (darunavir, tipranavir)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **talazoparib**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. [Moderate] Study
 - ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Olaparib** might increase the exposure to **talazoparib**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Osimertinib** is predicted to increase the exposure to **talazoparib**. [Moderate] Study
 - ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study → Also see TABLE 15 p. 1450
 - ▶ **SSRIs (fluvoxamine)** very slightly increase the exposure to **talazoparib**. [Moderate] Study
 - ▶ **Statins (atorvastatin)** very slightly increase the exposure to **talazoparib**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
 - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
- Tamoxifen** → see TABLE 5 p. 1448 (thromboembolism)
- ▶ **Tamoxifen (high-dose)** might increase the concentration of **antiepileptics (fosphenytoin)** and **antiepileptics (fosphenytoin)** might decrease the concentration of **tamoxifen (high-dose)**. [Severe] Theoretical
 - ▶ **Tamoxifen (high-dose)** might increase the concentration of **antiepileptics (phenytoin)** and **antiepileptics (phenytoin)** might decrease the concentration of **tamoxifen (high-dose)**. [Severe] Anecdotal
 - ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study

Tamoxifen (continued)

- ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **tamoxifen**. [Unknown] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study

Tamsulosin → see alpha blockers

Tapentadol → see opioids

Taxanes → see TABLE 15 p. 1450 (myelosuppression), TABLE 12 p. 1450 (peripheral neuropathy)

cabazitaxel · docetaxel · paclitaxel

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 12 p. 1450
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1450
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Ibrutinib** is predicted to increase the exposure to **paclitaxel**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 1450

- ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Iron chelators (deferasirox)** are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Ivacaftor** is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal → Also see TABLE 15 p. 1450
- ▶ **Letermovir** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel, paclitaxel**). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Mitotane** is predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 1450
- ▶ **Neratinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** slightly increase the exposure to **docetaxel**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Olaparib** might increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Osimertinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Vandetanib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical

- ▶ **Vemurafenib** is predicted to increase the exposure to **paclitaxel**. Use with caution and adjust dose. [Severe] Theoretical

Tazarotene → see retinoids

Tedizolid

- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **rosuvastatin**). Avoid. [Moderate] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study

Tegafur → see TABLE 15 p. 1450 (myelosuppression)

- ▶ **Tegafur** potentially increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** (**cimetidine**) are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical → Also see TABLE 15 p. 1450

Tecoplanin

GENERAL INFORMATION If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

Telavancin → see TABLE 2 p. 1447 (nephrotoxicity), TABLE 19 p. 1451 (ototoxicity), TABLE 9 p. 1449 (QT-interval prolongation)

Telmisartan → see angiotensin-II receptor antagonists

Telotristat ethyl

- ▶ **Telotristat ethyl** decreases the exposure to **benzodiazepines** (**midazolam**). [Moderate] Study
- ▶ **Telotristat ethyl** is predicted to decrease the exposure to **NRRTIs** (**doravirine**). Avoid or adjust doravirine p. 686 or lamivudine with tenofovir disoproxil and doravirine p. 696 dose. [Severe] Theoretical
- ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study

Temazepam → see benzodiazepines

Temocillin → see penicillins

Temozolomide → see alkylating agents

Temsirolimus → see TABLE 15 p. 1450 (myelosuppression)

- ▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temsirolimus**. [Moderate] Theoretical
- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of and the risk of angioedema when given with **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Temsirolimus** is predicted to increase the risk of angioedema when given with **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists** (**bosentan**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **temsirolimus**. [Mild] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacafor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1450
- ▶ **Neurokinin-1 receptor antagonists** (**aprepitant**, **netupitant**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **NRRTIs** (**efavirenz**, **nevirapine**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Olaparib** might alter the exposure to **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

Tenecteplase → see TABLE 3 p. 1447 (anticoagulant effects)

Tenofovir alafenamide

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **oxcarbazepine**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **lopinavir**) increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**tipranavir**) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical

Tenofovir alafenamide (continued)

- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- Tenofovir disoproxil** → see TABLE 2 p. 1447 (nephrotoxicity)
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 1447
- ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
- ▶ **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. [Severe] Study

Tenoxicam → see NSAIDs

Terazosin → see alpha blockers

Terbinafine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 418. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **fosetoridine**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
 - ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **terbinafine**. Adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (fluoxetine)**. Adjust dose. [Moderate] Theoretical
 - ▶ **Terbinafine** moderately increases the exposure to **SSRIs (paroxetine)**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Terbutaline** → see beta₂ agonists
 - Teriflunomide** → see TABLE 1 p. 1447 (hepatotoxicity)
 - ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
 - ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Study
 - ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Study
 - ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. [Severe] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
 - ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 1447
 - ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **NRTIs (zidovudine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study

- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **rifamycins (rifampicin)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 197. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Teriflunomide** moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 220. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study

Tetanus immunoglobulin → see immunoglobulins

- Tetrabenazine** → see TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects)
- ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- Tetracaine** → see anaesthetics, local
- Tetracycline** → see tetracyclines
- Tetracyclines** → see TABLE 1 p. 1447 (hepatotoxicity)

demeclocycline • doxycycline • lymecycline • minocycline • oxytetracycline • tetracycline

- ▶ Dairy products decrease the absorption of **demeclocycline** and **oxytetracycline**.
- ▶ Interactions do not generally apply to topical use of **oxytetracycline** unless specified.
- ▶ Dairy products decrease the exposure to **tetracycline**—manufacturer advises take 1 hour before or 2 hours after dairy products.
- ▶ Oral **ACE inhibitors (quinapril)** (magnesium carbonate-containing forms) might decrease the absorption of oral **tetracyclines**. Avoid. [Moderate] Study
- ▶ Oral **antacids** greatly decrease the absorption of oral **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** decrease the concentration of **doxycycline**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1447
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the concentration of **doxycycline**. Adjust dose. [Moderate] Theoretical
- ▶ **Tetracycline** decreases the concentration of **antimalarials (atovaquone)**. [Moderate] Study
- ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- ▶ **Doxycycline** is predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** might exacerbate skin pigmentation when given with **minocycline**. [Moderate] Anecdotal
- ▶ **Tetracyclines** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ Oral **iron** decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. [Moderate] Study
- ▶ Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- ▶ Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. [Severe] Anecdotal
- ▶ **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Rifamycins (rifampicin)** modestly decrease the exposure to **doxycycline**. Adjust dose. [Moderate] Study
- ▶ **Stromyl** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical
- ▶ Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical

Tezacaftor

FOOD AND LIFESTYLE Bitter (Seville) oranges might increase the exposure to tezacaftor.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [Severe] Study

Tezacaftor (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 314 and tezacaftor with ivacaftor and elexacaftor p. 314. [\[Severe\]](#) Study
 - ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- Thalidomide** → see TABLE 6 p. 1448 (bradycardia), TABLE 15 p. 1450 (myelosuppression), TABLE 12 p. 1450 (peripheral neuropathy), TABLE 5 p. 1448 (thromboembolism), TABLE 11 p. 1449 (CNS depressant effects)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) Theoretical

- Theophylline** → see TABLE 17 p. 1451 (reduced serum potassium)
- FOOD AND LIFESTYLE** Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.
- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [\[Mild\]](#) Study
 - ▶ **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [\[Moderate\]](#) Anecdotal
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [\[Moderate\]](#) Theoretical

- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **theophylline**. [\[Moderate\]](#) Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [\[Moderate\]](#) Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [\[Moderate\]](#) Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Study
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Metrelaprin** might alter the exposure to **theophylline**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [\[Severe\]](#) Study

- ▶ **St John's wort** potentially decreases the exposure to **theophylline**. [\[Severe\]](#) Anecdotal
 - ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
 - ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of adverse effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - Thiazide diuretics** → see TABLE 18 p. 1451 (hyponatraemia), TABLE 8 p. 1448 (hypotension), TABLE 17 p. 1451 (reduced serum potassium)
 - bendroflumethiazide • chlorothiazide • chlortalidone • hydrochlorothiazide • hydroflumethiazide • indapamide • metolazone • xipamide
 - ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [\[Severe\]](#) Theoretical
 - ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical
 - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [\[Severe\]](#) Anecdotal
 - ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [\[Severe\]](#) Study
 - ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 1451
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [\[Moderate\]](#) Anecdotal
 - ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [\[Severe\]](#) Theoretical
 - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [\[Moderate\]](#) Theoretical
 - Thiopental** → see TABLE 8 p. 1448 (hypotension), TABLE 11 p. 1449 (CNS depressant effects)
 - ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [\[Moderate\]](#) Theoretical
 - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1448 → Also see TABLE 11 p. 1449
 - Thiotepea** → see alkylating agents
 - Thrombin inhibitors** → see TABLE 3 p. 1447 (anticoagulant effects)
 - argatroban • bivalirudin • dabigatran
 - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **dabigatran**. [\[Mid\]](#) Study
 - ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (dronedaron)** moderately increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **dabigatran**. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [\[Moderate\]](#) Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Cobicistat** moderately increases the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [\[Moderate\]](#) Theoretical
 - ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Glecaprevir** with pibrentasvir increases the exposure to **dabigatran**. Avoid. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Anecdotal
 - ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **dabigatran**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Ivacaftor** is predicted to increase the exposure to **dabigatran**. [\[Moderate\]](#) Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [\[Severe\]](#) Theoretical
 - ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **dabigatran**. [\[Moderate\]](#) Study
 - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **dabigatran**. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** increase the exposure to **dabigatran**. [\[Moderate\]](#) Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [\[Severe\]](#) Theoretical
 - ▶ **Neratinib** is predicted to increase the exposure to **dabigatran**. [\[Moderate\]](#) Study
 - ▶ **Olaparib** might increase the exposure to **dabigatran**. [\[Moderate\]](#) Theoretical
 - ▶ **Osimertinib** is predicted to increase the exposure to **dabigatran**. [\[Moderate\]](#) Study
 - ▶ **Pibrentasvir** with glecaprevir increases the exposure to **dabigatran**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [\[Mid\]](#) Theoretical
 - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [\[Severe\]](#) Theoretical
 - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [\[Moderate\]](#) Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Ticagrelor** increases the exposure to **dabigatran**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **dabigatran**. [\[Moderate\]](#) Study
 - ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **dabigatran**. Avoid. [\[Severe\]](#) Study
- Thyroid hormones**
- levothyroxine • liothyronine
- FOOD AND LIFESTYLE** Food, including dietary fibre, milk, soya products, and coffee, might decrease the absorption of levothyroxine.
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Anecdotal

Thyroid hormones (continued)

- ▶ **Anti-androgens (apalutamide)** potentially decrease the exposure to **levothyroxine**. [Mild] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
 - ▶ **Oral calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
 - ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
 - ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
 - ▶ **Imatinib** causes hypothyroidism when given with **levothyroxine** in thyroidectomy patients. [Moderate] Study
 - ▶ **Oral iron** decreases the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Sunitinib** has been reported to cause hypothyroidism when given with **levothyroxine**. [Moderate] Anecdotal
- Tiagabine** → see antiepileptics
- Tiaprofenic acid** → see NSAIDs
- Tibolone** → see TABLE 5 p. 1448 (thromboembolism)
- Ticagrelor** → see TABLE 4 p. 1447 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit** juice moderately increases the exposure to **ticagrelor**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study

- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ticagrelor** slightly to moderately increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 221. [Moderate] Study
 - ▶ **Ticagrelor** increases the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- Tigecycline** → see TABLE 1 p. 1447 (hepatotoxicity)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Antiepileptics (carbamazepine)** might decrease the exposure to **tigecycline**. [Mild] Theoretical → Also see TABLE 1 p. 1447
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 1447
 - ▶ **Calcium channel blockers (verapamil)** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Ciclosporin** might increase the exposure to **tigecycline** and **tigecycline** has been reported to increase the concentration of **ciclosporin**. [Severe] Anecdotal
 - ▶ **Tigecycline** is predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Ivacaftor** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Lapatinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Macrolides** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Neratinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 1447
 - ▶ **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Ranolazine** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
 - ▶ **Rifamycins (rifampicin)** might decrease the exposure to **tigecycline**. [Mild] Theoretical
 - ▶ **St John's wort** might decrease the exposure to **tigecycline**. [Mild] Theoretical
 - ▶ **Tigecycline** has been reported to increase the concentration of **tacrolimus**. [Severe] Anecdotal
 - ▶ **Vandetanib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Vemurafenib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- Tildrakizumab** → see monoclonal antibodies
- Timolol** → see beta blockers, non-selective
- Tindazole**
- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **tindazole**. Avoid for 72 hours stopping treatment. [Moderate] Theoretical
 - ▶ **Tindazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical
- Tinzaparin** → see low molecular-weight heparins
- Tioguanine** → see TABLE 15 p. 1450 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Tiotropium** → see TABLE 10 p. 1449 (antimuscarinics)
- Tipranavir** → see HIV-protease inhibitors
- Tirofiban** → see TABLE 3 p. 1447 (anticoagulant effects)

Tivozanib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **statins (rosuvastatin)**. [Moderate] Theoretical

Tizanidine → see TABLE 6 p. 1448 (bradycardia), TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects)

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Axitinib** is predicted to increase the exposure to **tizanidine**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Rucaparib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Vemurafenib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1449

Tobramycin → see aminoglycosides

Tocilizumab → see monoclonal antibodies

Tofacitinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedaron)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study

- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tofacitinib**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Macrolides (erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **NRRTs (efavirenz, nevirapine)** are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1163. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study

Tolbutamide → see sulfonyleureas

Tolcapone

- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
 - ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical
- Tolfenamic acid** → see NSAIDs
- Tolterodine** → see TABLE 9 p. 1449 (QT-interval prolongation), TABLE 10 p. 1449 (antimuscarinics)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449
 - ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study

Tolterodine (continued)

- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1449

Tolvaptan → see TABLE 16 p. 1451 (increased serum potassium)

GENERAL INFORMATION Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 711. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 711. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 711. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 711. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomipatide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 711. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study

- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 711. [Moderate] Study
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 711. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
- Topiramate** → see antiepileptics
- Topotecan** → see TABLE 15 p. 1450 (myelosuppression)
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **topotecan**. Avoid. [Severe] Theoretical
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the clearance of **topotecan**. [Moderate] Study
 - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **topotecan**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Ivacaftor** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **topotecan**. [Moderate] Study
 - ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical
 - ▶ **Neratinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Olaparib** might increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Osimertinib** is predicted to increase the exposure to **topotecan**. [Moderate] Study
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **topotecan**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mild] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1450
 - ▶ **Rucaparib** is predicted to increase the exposure to **topotecan**. [Severe] Study → Also see TABLE 15 p. 1450
 - ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
 - ▶ **Teriflumide** is predicted to increase the exposure to **topotecan**. [Moderate] Study

- ▶ **Vandetanib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical
 - ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical
 - Toraseamide** → see loop diuretics
 - Toremifene** → see TABLE 5 p. 1448 (thromboembolism), TABLE 9 p. 1449 (QT-interval prolongation)
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **torsemifene**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1449
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **torsemifene**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **torsemifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Cobicistat** is predicted to increase the exposure to **torsemifene**. [\[Moderate\]](#) Theoretical
 - ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **torsemifene**. [\[Moderate\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **torsemifene**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **torsemifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Mitotane** is predicted to decrease the exposure to **torsemifene**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **torsemifene**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **torsemifene**. [\[Severe\]](#) Theoretical
 - Trabectedin** → see TABLE 1 p. 1447 (hepatotoxicity), TABLE 15 p. 1450 (myelosuppression)
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1447
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1447
 - ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
 - Tramadol** → see opioids
 - Trametinib** → see TABLE 4 p. 1447 (antiplatelet effects)
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Ivacaftor** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Neratinib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Rucaparib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Vandetanib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1447
 - ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - Trandolapril** → see ACE inhibitors
 - Tranexamic acid** → see TABLE 5 p. 1448 (thromboembolism)
 - Tranlycypromine** → see MAOIs, irreversible
 - Trastuzumab** → see monoclonal antibodies
 - Trastuzumab deruxtecan** → see monoclonal antibodies
 - Trastuzumab emtansine** → see monoclonal antibodies
 - Trazodone** → see TABLE 13 p. 1450 (serotonin syndrome), TABLE 11 p. 1449 (CNS depressant effects)
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. [\[Moderate\]](#) Anecdotal
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - Tree pollen extract**
- GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).
- Treosulfan** → see alkylating agents
 - Treprostinil** → see TABLE 8 p. 1448 (hypotension), TABLE 4 p. 1447 (antiplatelet effects)
 - ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin)** are predicted to decrease the exposure to **treprostinil**. Adjust dose. [\[Mil\]](#) Theoretical

Treprostinil (continued)

- ▶ **Clopidogrel** is predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1447
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Loop diuretics (furosemide)** might slightly decrease the clearance of **treprostinil**. [\[Unknown\]](#) Theoretical → Also see TABLE 8 p. 1448
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **treprostinil**. Adjust dose. [\[Mild\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical

Tretinoin → see retinoids

Triamcinolone → see corticosteroids

Triamterene → see potassium-sparing diuretics

Tricyclic antidepressants → see TABLE 18 p. 1451 (hyponatraemia), TABLE 8 p. 1448 (hypotension), TABLE 13 p. 1450 (serotonin syndrome), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects), TABLE 10 p. 1449 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1449
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 18 p. 1451
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1449
- ▶ **Antiepileptics (valproate)** increase the concentration of **nortriptyline**. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1448 → Also see TABLE 11 p. 1449
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [\[Mild\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [\[Severe\]](#) Study
- ▶ **Darifenacin** (high-dose) is predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study → Also see TABLE 10 p. 1449
- ▶ **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1450 → Also see TABLE 9 p. 1449

- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1448 → Also see TABLE 13 p. 1450
 - ▶ **Amitriptyline** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1450
 - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1448 → Also see TABLE 11 p. 1449
 - ▶ **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. [\[Severe\]](#) Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [\[Mild\]](#) Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450
 - ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450
 - ▶ **SSRIs (fluvoxamine)** increase the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1451 → Also see TABLE 13 p. 1450
 - ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [\[Moderate\]](#) Study
 - ▶ **Tricyclic antidepressants** increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
 - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1448 → Also see TABLE 11 p. 1449
- Trintine**
- ▶ Oral **trintine** potentially decreases the absorption of oral **iron**. [\[Moderate\]](#) Theoretical
 - ▶ **Trintine** potentially decreases the absorption of **zinc**. [\[Moderate\]](#) Theoretical
- Trifluoperazine** → see phenothiazines
- Trihexyphenidyl** → see TABLE 10 p. 1449 (antimuscarinics)
- Trimethoprim** → see TABLE 18 p. 1451 (hyponatraemia), TABLE 2 p. 1447 (nephrotoxicity), TABLE 16 p. 1451 (increased serum potassium)
- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Moderate\]](#) Study
 - ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **trimethoprim**. [\[Severe\]](#) Study
 - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
 - ▶ **Dapson** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [\[Severe\]](#) Study
 - ▶ **Trimethoprim** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
 - ▶ **Trimethoprim** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Trimethoprim** slightly increases the exposure to **meglitinides (repaglinide)**. Avoid or monitor blood glucose. [\[Moderate\]](#) Study
 - ▶ **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1447
 - ▶ **Trimethoprim** slightly increases the exposure to **NRTIs (lamivudine)**. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **trimethoprim**. [\[Moderate\]](#) Study
 - ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [\[Moderate\]](#) Theoretical

▶ **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical

Trimipramine → see tricyclic antidepressants

Triptans → see TABLE 13 p. 1450 (serotonin syndrome)

almotriptan · eletriptan · frovatriptan · naratriptan · rizatriptan · sumatriptan · zolmitriptan

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [\[Mild\]](#) Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study

▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours, p. 505. [\[Moderate\]](#) Study

▶ **Cobicistat** increases the exposure to **almotriptan**. [\[Mild\]](#) Study

▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study

▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Moderate\]](#) Theoretical

▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **almotriptan**. [\[Severe\]](#) Theoretical

▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [\[Severe\]](#) Study

▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **rizatriptan**. [\[Severe\]](#) Theoretical

▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **sumatriptan**. [\[Severe\]](#) Study

▶ **Triptans (frovatriptan, naratriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [\[Severe\]](#) Theoretical

▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [\[Severe\]](#) Theoretical

▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Mild\]](#) Study

▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [\[Mild\]](#) Study

▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study

▶ **Idelalisib** increases the exposure to **almotriptan**. [\[Mild\]](#) Study

▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study

▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [\[Mild\]](#) Study

▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study

▶ **Macrolides (erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. [\[Moderate\]](#) Study

▶ **MAOIs, irreversible** are predicted to increase the exposure to triptans (**rizatriptan, sumatriptan**). Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1450

▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1450

▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Moderate\]](#) Theoretical

▶ **Moclobemide** moderately increases the exposure to triptans (**rizatriptan, sumatriptan**). Avoid. [\[Moderate\]](#) Study → Also see TABLE 13 p. 1450

▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Moderate\]](#) Study → Also see TABLE 13 p. 1450

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eletriptan**. [\[Moderate\]](#) Study

▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Moderate\]](#) Theoretical

▶ **Rucaparib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Moderate\]](#) Theoretical

▶ **SSRIs (fluvoxamine)** increase the concentration of **frovatriptan**. [\[Severe\]](#) Study → Also see TABLE 13 p. 1450

▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1450

▶ **Vemurafenib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 507. [\[Moderate\]](#) Theoretical

Tropicamide → see TABLE 10 p. 1449 (antimuscarinics)

Trospium → see TABLE 10 p. 1449 (antimuscarinics)

Tryptophan → see TABLE 13 p. 1450 (serotonin syndrome)

▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [\[Moderate\]](#) Study

▶ **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1450

Typhoid vaccine, oral → see live vaccines

Ulipristal

▶ **Anti-androgens (enzalutamide)** are predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [\[Severe\]](#) Theoretical

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamil, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [\[Severe\]](#) Anecdotal

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study

▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [\[Severe\]](#) Theoretical

▶ **Endothelin receptor antagonists (bosentan)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [\[Severe\]](#) Anecdotal

▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [\[Severe\]](#) Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Theoretical

▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [\[Severe\]](#) Anecdotal

▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study

▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [\[Severe\]](#) Anecdotal

▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study

▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

▶ **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

Ulipristal (continued)

- ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **St John's wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 843. [Severe] Anecdotal
- ▶ **Umeclidinium** → see TABLE 10 p. 1449 (antimuscarinics)
- Upadacitinib**
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- Urokinase** → see TABLE 3 p. 1447 (anticoagulant effects)
- Ursodeoxycholic acid**
 - ▶ Oral **antacids** are predicted to decrease the absorption of oral **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
 - ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
 - ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical
- Ustekinumab** → see monoclonal antibodies
- Vaborbactam**
 - ▶ **Vaborbactam** is predicted to increase the concentration of **beta blockers, selective (metoprolol)**. [Unknown] Theoretical

- ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical
- Valaciclovir** → see TABLE 2 p. 1447 (nephrotoxicity)
- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- Valganciclovir** → see TABLE 15 p. 1450 (myelosuppression), TABLE 2 p. 1447 (nephrotoxicity)
- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **carbapenems (imipenem)**. Avoid. [Severe] Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical
- Valproate** → see antiepileptics
- Valsartan** → see angiotensin-II receptor antagonists
- Vancomycin** → see TABLE 2 p. 1447 (nephrotoxicity), TABLE 19 p. 1451 (ototoxicity)
- Vandetanib** → see TABLE 9 p. 1449 (QT-interval prolongation), TABLE 4 p. 1447 (antiplatelet effects)
 - ▶ **Vandetanib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **vandetanib**. [Moderate] Study
 - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **vandetanib**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **loperamide**. [Moderate] Study
 - ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study → Also see TABLE 4 p. 1447
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **vandetanib**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study

- ▶ **St John's wort** is predicted to decrease the exposure to vandetanib. Avoid. [\[Severe\]](#) Study
- ▶ **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose, p. 1059. [\[Severe\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [\[Moderate\]](#) Study
- ▶ **Vandetanib** might increase the exposure to **tigecycline**. [\[Mild\]](#) Anecdotal
- ▶ **Vandetanib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Vandetanib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1447
- ▶ **Vandetanib** might increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
- Vardenafil** → see phosphodiesterase type-5 inhibitors
- Varicella-zoster immunoglobulin** → see immunoglobulins
- Varicella-zoster vaccine** → see live vaccines
- Vedronium** → see neuromuscular blocking drugs, non-depolarising
- Vedolizumab** → see monoclonal antibodies
- Velpatasvir**
 - ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [\[Severe\]](#) Theoretical
 - ▶ Oral **antacids** are predicted to decrease the concentration of oral velpatasvir. Separate administration by 4 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to velpatasvir. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of velpatasvir. Avoid or monitor. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to velpatasvir. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to velpatasvir. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Severe\]](#) Theoretical
 - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of velpatasvir. Separate administration by 4 hours. [\[Moderate\]](#) Anecdotal
 - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [\[Severe\]](#) Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to velpatasvir. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [\[Severe\]](#) Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to velpatasvir. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [\[Severe\]](#) Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 673. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors (tipranavir)** are predicted to increase the exposure to velpatasvir. [\[Severe\]](#) Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [\[Severe\]](#) Theoretical
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to velpatasvir. Avoid. [\[Severe\]](#) Study
 - ▶ **Modafinil** is predicted to decrease the exposure to velpatasvir. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to velpatasvir. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 673. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to velpatasvir. Avoid. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to velpatasvir. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Velpatasvir** with sofosbuvir slightly increases the exposure to **statins (atorvastatin)**. [\[Severe\]](#) Study
- ▶ **Velpatasvir** with sofosbuvir is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Velpatasvir** moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose and monitor adverse effects, p. 220. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Severe\]](#) Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [\[Severe\]](#) Study
- ▶ **Velpatasvir** increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- Vemurafenib** → see TABLE 9 p. 1449 (QT-interval prolongation)
- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1449
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to vemurafenib. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1449
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to vemurafenib. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vemurafenib. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to vemurafenib. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Vemurafenib** slightly to moderately decreases the exposure to **benzodiazepines (midazolam)**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to decrease the concentration of **bupropion**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to vemurafenib. [\[Severe\]](#) Theoretical
- ▶ **Ciclosporin** might affect the exposure to vemurafenib. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to vemurafenib. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1175. [\[Severe\]](#) Theoretical

Vemurafenib (continued)

- ▶ **Vemurafenib** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Dabrafenib** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **depeptidyl/peptidase-4 inhibitors (sitagliptin)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **duloxetine**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **endothelin receptor antagonists (ambrisentan)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **factor XA inhibitors (rivaroxaban)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Gefitinib** might affect the exposure to **vemurafenib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **loperamide**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (ipilimumab)** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical

- ▶ **Nilotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **vemurafenib**. [Severe] Study → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenindione**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1449
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1059. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **taxanes (paclitaxel)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Vemurafenib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Vemurafenib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1449
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 507. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449

Venetoclax

FOOD AND LIFESTYLE Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to

- increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **sirilimum**. Avoid or adjust dose. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **statins (fluvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **sulfonyleureas (glibenclamide)**. [Moderate] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid or adjust dose. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Venlafaxine** → see TABLE 13 p. 1450 (serotonin syndrome), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects), TABLE 4 p. 1447 (antiplatelet effects)
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **venlafaxine**. [Mild] Study
 - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1449 → Also see TABLE 11 p. 1449
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1449
 - ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
 - ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical
- Verapamil** → see calcium channel blockers
- Vernakalant** → see antiarrhythmics
- Verteporfin**
- GENERAL INFORMATION** Caution on concurrent use with other photosensitising drugs.
- Vigabatrin** → see antiepileptics
- Vilanterol** → see beta₂ agonists
- Vildagliptin** → see dipeptidylpeptidase-4 inhibitors
- Vinblastine** → see vinca alkaloids
- Vinca alkaloids** → see TABLE 1 p. 1447 (hepatotoxicity), TABLE 15 p. 1450 (myelosuppression), TABLE 19 p. 1451 (ototoxicity), TABLE 12 p. 1450 (peripheral neuropathy), TABLE 5 p. 1448 (thromboembolism), TABLE 9 p. 1449 (QT-interval prolongation)
- vinblastine · vincristine · vindesine · vinflunine · vinorelbine
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to vinca alkaloids (**vinblastine, vincristine, vindesine**). [Severe] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 12 p. 1450 → Also see TABLE 9 p. 1449
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1450
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1450
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids (**vinblastine, vincristine, vindesine**). [Severe] Theoretical → Also see TABLE 1 p. 1447 → Also see TABLE 12 p. 1450
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to

Vinca alkaloids (continued)

- increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1447 → Also see TABLE 9 p. 1449
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 1447 → Also see TABLE 15 p. 1450
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Ciclosporin** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 1447 → Also see TABLE 15 p. 1450
 - ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Ivacaftor** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Lapatinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Macrolides (azithromycin)** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1450
 - ▶ **Neratinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1447
 - ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1450 → Also see TABLE 9 p. 1449
 - ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1447 → Also see TABLE 15 p. 1450
 - ▶ **Ranolazine** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
 - ▶ **Rucaparib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1450

- ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine)**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
 - ▶ **Vandetanib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
 - ▶ **Vemurafenib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1449
- Vincristine** → see **vinca alkaloids**
- Vindesine** → see **vinca alkaloids**
- Vinflunine** → see **vinca alkaloids**
- Vinorelbine** → see **vinca alkaloids**
- Vismodegib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

Vitamin A

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · ergocalciferol · paricalcitol · tacalcitol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalciferol**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
 - ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
 - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- Vitamin E substances**
- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
- Volanesorsen**
- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1447). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

▶ **Volanerosen** potentially increases the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 1447). Avoid depending on platelet count—consult product literature. [\[Severe\]](#) Theoretical

Volatile halogenated anaesthetics → see TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects)

desflurane · isoflurane · methoxyflurane · sevoflurane

- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1449
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [\[Severe\]](#) Theoretical
- Voriconazole** → see antifungals, azoles
- Vortioxetine** → see TABLE 13 p. 1450 (serotonin syndrome), TABLE 4 p. 1447 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 13 p. 1450 → Also see TABLE 4 p. 1447
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study

Voxilaprevir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** with sofosbuvir and velpatasvir. Avoid. [\[Severe\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the concentration of **factor XA inhibitors (edoxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 674. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 218. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to **statins (pravastatin)**. Monitor and adjust pravastatin dose. [\[Moderate\]](#) Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor

Yellow fever vaccine, live → see live vaccines

Zidovudine → see NRTIs

Zinc

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ Oral zinc decreases the absorption of oral **bisphosphonates (alendronate)**. Alendronate should be taken at least 30 minutes before zinc. [\[Moderate\]](#) Study
- ▶ Oral zinc decreases the absorption of oral **bisphosphonates (clodronate)**. Avoid zinc for 2 hours before or 1 hour after clodronate. [\[Moderate\]](#) Study
- ▶ Oral zinc is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid zinc for at least 6 hours before or 1 hour after ibandronate. [\[Moderate\]](#) Theoretical
- ▶ Oral zinc decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of zinc. [\[Moderate\]](#) Study
- ▶ Oral zinc is predicted to decrease the absorption of **eltrombopag**. Eltrombopag should be taken 2 hours before or 4 hours after zinc. [\[Severe\]](#) Theoretical
- ▶ Oral zinc is predicted to decrease the efficacy of oral **iron** and oral **iron** is predicted to decrease the efficacy of oral zinc. [\[Moderate\]](#) Study
- ▶ Oral zinc is predicted to decrease the absorption of oral **iron chelators (deferiprone)**. [\[Moderate\]](#) Theoretical
- ▶ Zinc is predicted to decrease the absorption of **penicillamine**. [\[Mil\]](#) Theoretical
- ▶ Zinc is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study

Zinc (continued)

- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours.

[Moderate] Theoretical

- ▶ **Trintine** potentially decreases the absorption of **zinc**.

[Moderate] Theoretical

Zoledronate → see bisphosphonates

Zolmitriptan → see triptans

Zolpidem → see TABLE 11 p. 1449 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **zolpidem**. [Moderate] Study

- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **zolpidem**. [Moderate] Study

Zonisamide → see antiepileptics

Zopiclone → see TABLE 11 p. 1449 (CNS depressant effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1449

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

- ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Zuclopenthixol → see TABLE 8 p. 1448 (hypotension), TABLE 9 p. 1449 (QT-interval prolongation), TABLE 11 p. 1449 (CNS depressant effects)

- ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1448 → Also see TABLE 9 p. 1449

- ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1448

- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1449

Appendix 2

Borderline substances

CONTENTS

Enteral feeds (non-disease specific)	page 1656	Feed thickeners and pre-thickened drinks	page 1682
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1656	Flavouring preparations	1682
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1658	Foods for special diets	1683
Nutritional supplements (non-disease specific)	1662	Gluten-free foods	1683
Nutritional supplements: less than 5 g protein/100 mL	1662	Low-protein foods	1685
Nutritional supplements: 5 g (or more) protein/100 mL	1664	Nutritional supplements for metabolic diseases	1688
Specialised formulas	1673	Glutaric aciduria (type 1)	1688
Specialised formulas for specific clinical conditions	1673	Glycogen storage disease	1689
Feed supplements	1677	Homocystinuria or hypermethioninaemia	1689
High-energy supplements	1677	Maple syrup urine disease	1689
Fibre, vitamin, and mineral supplements	1681	Methylmalonic or propionic acidemia	1690
Feed additives	1682	Other inborn errors of metabolism	1690
Special additives for conditions of intolerance	1682	Phenylketonuria	1691
		Tyrosinaemia	1694

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Dermatitis, Eczema and Pruritus

Aveeno[®] Cream; *Aveeno*[®] Lotion; *E45*[®] Emollient Bath Oil; *E45*[®] Emollient Wash Cream

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark[®] classic foundation and finishing powder; *Dermacolor*[®] Camouflage cream and fixing powder; *Keromask*[®] finishing powder and masking cream; *Veil*[®] Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome. *AS Saliva Orthana*[®]; *Biotène Oralbalance*[®]; *Glandosane*[®]; *Saliveze*[®]

Photodermatoses (skin protection in)

LA Roche-Posay Anthelios[®] XL SPF 50+ cream; *Sunsense*[®] Ultra (Ego) SPF 50+; *Uvistat*[®] Lipscreen SPF 50, *Uvistat*[®] Suncream SPF 30 and 50

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

Table 1 Enteral feeds (non-disease specific)

Less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin 1500 Complete liquid: 1.5 litre = £15.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.0 g (sugars 0.85 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin Original Fibre liquid: 500 ml = £5.97; 1000 ml = £11.26
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original tube feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 0.9 g)	3.4 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also Refsum's Disease.	Fresubin Original tube feed liquid: 500 ml = £5.53; 1000 ml = £9.72; 1500 ml = £14.59
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 0.25 g)	3.47 g	1.76 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula.	Jevity liquid: 500 ml = £6.09; 1000 ml = £11.49; 1500 ml = £17.21
Not suitable for use in child under 1 year; not recommended for use in children									
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cow's milk, pea, soya, whey proteins	12.3 g (sugars 0.7 g)	3.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1655.	Nutrison liquid: 500 ml = £5.69; 1000 ml = £9.99; 1500 ml = £15.00
Not suitable for use in child under 1 year; not recommended for child 1-6 year									
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g caseinate, pea, soya, whey proteins	12.3 g (sugars 0.8 g)	3.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Nutrison Multi Fibre liquid: 500 ml = £6.15; 1000 ml = £11.58; 1500 ml = £17.34
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (101 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 0.6 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Osmolite liquid: 500 ml = £5.64; 1000 ml = £9.91; 1500 ml = £14.87
Not suitable for use in child under 1 year; not recommended for use in children									

SOYA PROTEIN FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	12.1 g (sugars 4.1 g)	3.6 g	2 g	Contains fish oil, soya. Gluten-free, lactose-free	Borderline substances standard ACBS indications p. 1655 except dysphagia. Also cows' milk protein intolerance, lactose intolerance.	Fresubin Soya Fibre liquid: 500 ml = £5.62
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soya protein isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also cow's milk protein and lactose intolerance.	Nutrison Soya liquid: 500 ml = £6.14; 1000 ml = £12.31
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g soya protein	12.3 g (sugars 0.7 g)	3.9 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also cows' milk protein and lactose intolerance.	Nutrison Soya Multi Fibre liquid: 1.5 litre = £20.47
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
PEPTIDE-BASED FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison® Peptisorb (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also growth failure.	Nutrison Peptisorb liquid: 500 ml = £8.96; 1000 ml = £16.15
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Peptamen® liquid unflavoured (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	421 kJ (100 kcal)	4 g whey protein	13 g (sugars 0.48 g)	3.7 g (MCT 70%)	Nil	Contains residual lactose, soya. Gluten-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid unflavoured: 500 ml = £7.52; 1000 ml = £14.12
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4.5-4.7 g whey protein hydrolysate	14.1-14.3 g (sugars 1.1-5 g)	2.8 g (MCT 48-51%)	less than or equal to 0.1 g	Contains fish oil (tube feed only), residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655; also growth failure.	Survimed OPD liquid: 500 ml = £8.57; 800 ml = £13.56; 1000 ml = £16.61
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Peptamen® Junior 0.6 (Nestle Health Science)	Liquid (tube feed) per 100 mL	254 kJ (60 kcal)	2.3 g whey protein	6.8 g (sugars 1.5 g)	2.5 g (MCT 36%)	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease-related malnutrition in patients with malabsorption and/or maldigestion who have reduced energy requirements.	Peptamen Junior 0.6 liquid: 500 ml = £7.32
Not suitable for use in child under 1 year									

Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655	Fresubin 2250 Complete liquid: 1.5 litre = £17.10
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, whey proteins	18.8 g (sugars 1.1-6.3)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Fresubin Energy liquid unflavoured: 200 ml = £1.40; 500 ml = £6.43; 1000 ml = £12.14; 1500 ml = £18.16
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® Energy Fibre Tube Feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Fresubin Energy Fibre liquid unflavoured: 500 ml = £7.15; 1000 ml = £13.48; 1500 ml = £15.68
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	17 g (sugars 1 g)	5.8 g (MCT 57%)	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also CAPD and haemodialysis.	Fresubin HP Energy liquid: 500 ml = £6.58; 1000 ml = £12.42
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Fresubin® HP Energy Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	16.2 g (sugars 1.1 g)	5.8 g (MCT 57%)	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia. Also CAPD and haemodialysis.	Fresubin HP Energy Fibre liquid: 500 ml = £7.33; 1000 ml = £13.92
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Jevity® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	649 kJ (154 kcal)	6.38 g caseinates, soya protein isolate	20.1 g (sugars 1.3 g)	4.9 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Jevity 1.5kcal liquid: 500 ml = £7.29; 1000 ml = £13.75; 1500 ml = £21.22
Not recommended for use in children									
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g caseinate, pea, soya, whey proteins	18.3 g (sugars 1.1 g)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655	Nutrison Energy liquid: 500 ml = £6.63; 1000 ml = £12.47; 1500 ml = £18.67
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	640 kJ (153 kcal)	6 g caseinates, pea, soya, whey proteins	18.4 g (sugars 2.4 g)	5.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Nutrison Energy Multi Fibre liquid: 500 ml = £7.36; 1000 ml = £13.85; 1500 ml = £21.38
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

Nutrison® Peptisorb Plus HEHP (Nutricia Ltd)	Liquid (tube feed) per 100 ml	631 kJ (150 kcal)	7.5 g whey protein hydrolysate	18.7 g (sugars 1.4 g)	5 g (MCT 60%)	Less than 0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Nutrison Peptisorb Plus HEHP liquid: 500 ml = £8.93; 1000 ml = £16.81
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g caseinates, pea, soya, whey proteins	16.9 g (sugars 3.3 g)	5.8 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Nutrison Protein Plus Energy liquid: 500 ml = £6.63; 1000 ml = £12.48
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Osmolite® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	634 kJ (151 kcal)	6.3 g caseinates, soya protein isolate	20.4 g (sugars 1.2 g)	4.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also continuous ambulatory peritoneal dialysis (CAPD), and haemodialysis.	Osmolite 1.5kcal tube feed liquid: 500 ml = £6.56; 1000 ml = £12.38; 1500 ml = £18.52
Not suitable for use in child under 1 year; not recommended for use in children									
Vital® 1.5kcal (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	6.8 g caseinates, whey protein hydrolysate	18.4 g (sugars 3.5 g)	5.5 g (MCT 64%)	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Vital 1.5kcal liquid: vanilla 200 ml = £3.43; 1000 ml = £17.58; cafe latte 200 ml = £3.43; mixed berry 200 ml = £3.43
Not recommended for use in children									
Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1000 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	418 kJ (100 kcal)	5.5 g milk protein	12.5 g (sugars 1.1 g)	2.7 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655	Fresubin 1000 Complete liquid: 1 litre = £12.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 1200 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	504 kJ (120 kcal)	6 g milk protein	14 g (sugars 1.17 g)	4.1 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Fresubin 1200 Complete liquid: 1 litre = £15.69
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 1800 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	504 kJ (120 kcal)	6 g milk protein	14 g (sugars 1.17 g)	4.1 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Fresubin 1800 Complete liquid: 1.5 litre = £15.69
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Jevity® Plus (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	514 kJ (122 kcal)	5.6 g caseinates, soya protein isolate	15.1 g (sugars 0.75 g)	3.9 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Jevity Plus liquid: 500 ml = £7.30; 1000 ml = £13.31; 1500 ml = £19.91
Not recommended for use in children									

Enteral feeds: Less than 1.5 kcal/mL and 5g (or more) protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Jevity® Plus HP (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	551 kJ (131 kcal)	8.1 g caseinates, milk, soya protein isolates	14.2 g (sugars 0.7 g)	4.3 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also CAPD, haemodialysis.	Jevity Plus HP gluten free liquid: 500 ml = £7.16
Not suitable for use in child under 2 years; not recommended for use in children									
Jevity® Promote (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	434 kJ (103 kcal)	5.6 g caseinates, soya protein isolate	12.0 g (sugars 0.52 g)	3.3 g	1.7 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Jevity Promote liquid: 1 litre = £12.73
Not suitable for use in child under 2 years; not recommended for use in children									
Nutrison® 800 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	345 kJ (83 kcal)	5.5 g caseinate, pea, soya, whey proteins	8.8 g (sugars 0.6 g)	2.5 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula.	Nutrison 800 Complete Multi Fibre liquid: 1 litre = £12.11
Not suitable for use in child under 6 years; not recommended for child under 12 years									
Nutrison® 1000 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	440 kJ (104 kcal)	5.5 g caseinate, pea, soya, whey proteins	11.3 g (sugars 0.8 g)	3.7 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition in patients with low energy and/or low fluid requirements.	Nutrison 1000 Complete Multi Fibre liquid: 1 litre = £12.85
Not suitable for use in child under 1 year; not recommended for child under 12 years									
Nutrison® 1200 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	525 kJ (124 kcal)	5.5 g caseinates, pea, soya, whey proteins	15 g (sugars 1 g)	4.3 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula.	Nutrison 1200 Complete Multi Fibre liquid: 1000 ml = £13.59; 1500 ml = £20.41
Not suitable for use in child under 1 year; not recommended for child under 12 years									
Nutrison® MCT (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	5 g caseinates	12.6 g (sugars 1 g)	3.3 g (MCT 61%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Nutrison MCT liquid: 1000 ml = £11.57
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus (Nutricia Ltd)	Liquid (tube feed) per 100 mL	525 kJ (125 kcal)	6.3 g caseinates, pea, soya, whey proteins	14.2 g (sugars 0.9 g)	4.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition.	Nutrison Protein Plus liquid: 500 ml = £6.13; 1 litre = £11.88
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	535 kJ (128 kcal)	6.3 g caseinates, pea, soya, whey proteins	14.1 g (sugars 1 g)	4.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition.	Nutrison Protein Plus Multifibre liquid: 1 litre = £13.24; 500 ml = £6.82

Not suitable for use in child under 1 year; not recommended in child 1-6 years									
Osmolite® Plus (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	508 kJ (121 kcal)	5.6 g caseinates	15.8 g (sugars 0.42 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Osmolite Plus liquid: 500 ml = £6.13; 1000 ml = £11.15
Not suitable for use in child under 1 year; not recommended for use in children									
Peptamen® HN (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	559 kJ (133 kcal)	6.6 g whey protein hydrolysate	16 g (sugars 1.4 g)	4.9 g (MCT 69%)	Nil	Contains meat derivatives, residual lactose, soya. Gluten- free	Impaired gastrointestinal function, short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease and bowel fistula or with higher nutritional requirements.	Peptamen HN liquid: 500 ml = £8.09; 1000 ml = £15.20
Not suitable for use in child under 3 years									
Perative® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	552 kJ (131 kcal)	6.7 g caseinates, whey protein hydrolysate	17.7 g (sugars 0.45 g)	3.7 g (MCT 37%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Perative liquid: 500 ml = £8.68; 1000 ml = £16.02
Not suitable for use in child under 1 year; not recommended for use in children¹									
Survimed® OPD HN (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	560 kJ (133 kcal)	6.7 g whey protein hydrolysate	18.3 g (sugars 1.3 g)	3.7 g (MCT 52%)	Less than or equal to 0.1 g	Contains fish oil, residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655; also haemodialysis and continuous ambulatory peritoneal dialysis.	Survimed OPD HN liquid: 500 ml = £8.37
Not suitable for use in child under 3 years; not recommended for use in child under 6 years									
Enteral feeds: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL

Fresubin® 2kcal HP (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	840 kJ (200 kcal)	10 g milk protein	17.5 g (sugars 2.5 g)	10 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Fresubin 2kcal HP tube liquid feed: 500 ml = £8.04
Not suitable for use in child under 1 year; not recommended for child under 6 years									
Fresubin® 2kcal HP Fibre (Fresenius Kabi Ltd)	Liquid per 100 mL	840 kJ (200 kcal)	10 g milk protein	16.7 g (sugars 2.5 g)	10 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Fresubin 2kcal HP Fibre tube feed liquid: 500 ml = £9.62
Not suitable for use in child under 1 year; not recommended for child under 6 years									
TwoCal® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	837 kJ (200 kcal)	8.4 g casein, milk protein isolate	21 g hydrolysed corn starch (sugars 4.7 g)	8.9 g	1 g	Contains residual lactose, soya. Gluten-free	Adults with or at risk of disease- related malnutrition, catabolic or fluid-restricted patients, and other patients requiring a 2 kcal/mL feed.	TwoCal liquid: 1 litre = £17.99
Not recommended for use in children									

Table 2 Nutritional supplements (non-disease specific)

Nutritional supplements: less than 5 g protein/100 mL

Nutritional supplements: 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028 [®] Extra liquid (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	11 g (sugars 4.7 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra liquid: grapefruit, orange & pineapple, summer fruits 250ml = £4.21
Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Elemental 028 [®] Extra powder (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	374 kJ (89 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12 g (sugars 1.1 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra powder: banana, orange, plain 100g = £8.19
Powder provides: protein 12.5 g, carbohydrate 59 g, fat 17.5 g, energy 1871 kJ (443 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Emsogen [®] (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	368 kJ (88 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12.0 g (sugars 1.6 g)	3.3 g (MCT 83%)	Nil		Short-bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Emsogen powder unflavoured: 100 gram = £8.43
Powder provides: protein 12.5 g, carbohydrate 60.0 g, fat 16.4 g, energy 1839 kJ (438 kcal)/100 g Not suitable for use in child under 1 year; not recommended for use in child under 5 years									
Ensure [®] (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	423 kJ (100 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 3.8 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free.	Disease-related malnutrition, intractable malabsorption, total gastrectomy, proven inflammatory bowel disease, and pre-operative preparation of patients who are undernourished.	Ensure liquid: chocolate, coffee, vanilla 250 ml = £2.49
Not suitable for use in child under 1 year; not recommended for use in children									
Fresubin [®] Original drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 3.5 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also Refsum's Disease.	Fresubin Original drink: blackcurrant, chocolate, neat, peach, vanilla 200 ml = £2.48
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Peptamen® liquid vanilla (Nestle Health Science)	Liquid (sip feed) per 100 mL	421 kJ (100 kcal)	4 g whey protein	12.7 g (sugars 3.3 g)	3.7 g (MCT 68%)	Nil	Contains residual lactose, soya	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid vanilla: 800 ml = £13.38
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Resource® Thickened Drink (Nestle Health Science)	Liquid (sip feed) per 100 mL	376 kJ (89 kcal)	0.4 g	21 g (sugars 9.5 g)	Less than 0.1 g	Nil	Gluten-free, lactose-free	Dysphagia.	Resource Thickened Drink custard: apple 114 ml = £0.78; orange 114 ml = £0.78; Resource Thickened Drink syrup orange: 114 ml = £0.78
Not suitable for use in child under 3 years									
Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Altrajuce® (Nualtra Ltd)	Liquid (sip feed) per 100 ml	636 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.5 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Altrajuce Starter Pack liquid: 800 ml = £6.93; Altrajuce liquid: apple, blackcurrant, orange, strawberry 200 ml = £1.70
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes® Shake Extra (Aymes International Ltd)	Powder per 100 g	2090 kJ (499 kcal)	4.8 g milk protein	62.9 g (sugar 22.4 g)	25.3 g	0.38 g	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Aymes Shake Extra Starter Pack powder: 4 sachet = £8.96; Aymes Shake Extra powder 85g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £11.76
Powder 85 g reconstituted with 240 ml milk provides: protein 12.4 g, carbohydrate 64.8 g, fat 31.3 g, energy 2462 kJ (589 kcal)									
Not suitable for use in child under 1 year, not recommended for child under 6 years									
EnergieShake® Powder (Anaiah Healthcare PVT Ltd)	Powder per 100 g	1849 kJ (439 kcal)	16.5 g milk protein	62.1 g (sugars 26.8 g)	13.9 g	Less than 1 g	Contains lactose, soya	Borderline substances standard ACBS indications p. 1655.	EnergieShake Powder Starter Pack oral powder sachets: 285 gram = £2.88; EnergieShake Powder oral powder 57g sachets: banana, chocolate, neutral, strawberry, vanilla 4 sachet = £1.76; 7 sachet = £3.08
Powder 57 g reconstituted with 200 mL water provides: protein 9.4 g, carbohydrate 35.4 g, fat 7.9 g, energy 1054 kJ (250 kcal)									
Not recommended for use in child under 6 years									
Ensure® Plus Juice (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	638 kJ (150 kcal)	4.8 g whey protein isolate	32.7 g (sugars 9.4 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655	Ensure Plus Juice liquid: apple, fruit punch, lemon & lime, orange, peach, strawberry 220 ml = £2.00
Not suitable for use in child under 1 year; not recommended for use in children									
Fortijuce® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	635 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.1 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655; except dysphagia.	Fortijuce Starter Pack liquid: 800 ml = £8.08; Fortijuce liquid: apple, blackcurrant, forest fruits, lemon, orange, strawberry, tropical 200 ml = £2.02; Fortisip Range Starter Pack liquid: 2 litre = £20.20
Not suitable for use in child under 1 year; not recommended for child 1-5 years									

Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL (product list continued)

Fresubin [®] Jucy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	4 g whey protein	33.5 g (sugars 8 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655; also CAPD and haemodialysis.	Fresubin Jucy drink: apple, blackcurrant, cherry, orange, pineapple 800 ml = £8.04
Not suitable for use in child under 3 years; use with caution in child under 6 years									
Nutritional supplements: 5 g (or more) protein/100 mL									
Nutritional supplements: 1.5 kcal/mL and 5 g (or more) protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Altraplen [®] Protein (Nualtra Ltd)	Liquid (sip feed) per 100 mL	632 kJ (150 kcal)	10 g milk, soya proteins	15 g (sugars 4.6 g)	5.6 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Altraplen Protein Starter Pack liquid: 400 ml = £3.35; Altraplen Protein liquid: strawberry, vanilla 800 ml = £6.91
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes [®] ActaCal Creme (Aymes International Ltd)	Semi-solid per 100 g	632 kJ (150 kcal)	7.5 g caseinates, milk protein	19 g (sugars 8.1 g)	4.9 g	Nil	Contains residual lactose. Gluten-free.	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Aymes ActaCal Creme Starter Pack dessert: 250 gram = £2.34; Aymes ActaCal Creme dessert: chocolate, vanilla 500 gram = £4.77
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes [®] Complete (Aymes International Ltd)	Liquid per 100 mL	630 kJ (150 kcal)	6 g milk protein	18 g (sugars 6.8 g)	6 g	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Aymes Complete Starter Pack liquid: banana, chocolate, strawberry, vanilla 800 ml = £4.20
Not suitable for use in child under 3 years; not recommended for child under 11 years									
EnergieShake [®] Complete 1.5kcal (Anaiah Healthcare PVT Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	6 g milk proteins	18 g (sugars 6.5 g)	6 g	Nil	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655, CAPD and haemodialysis.	EnergieShake Complete 1.5kcal liquid: banana, chocolate, strawberry, vanilla 200 ml = £1.01
Not suitable for use in child under 3 years; not recommended for child under 11 years									
EnergieShake [®] dessert (Anaiah Healthcare PVT Ltd)	Semi-solid per 100 g	632 kJ (150 kcal)	7.5 g caseinates, milk protein isolate	19 g (sugars 8.1 g)	4.9 g	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	EnergieShake dessert: caramel, chocolate 375 gram = £3.30
Not suitable for use in child under 3 years									

Ensure® Plus Advance (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	9.1 g caseinates, milk protein isolate, soya protein isolate, whey protein.	16.8 g sucrose (sugars 6.8 g)	4.8 g	0.75 g	Contains soya. Gluten-free	Frail elderly people (this is defined as older than 65 years with BMI less than or equal to 23 kg/m ² where clinical assessment and nutritional screening show the individual to be at risk of undernutrition).	Ensure Plus Advance liquid: banana, chocolate, coffee, strawberry, vanilla 220 ml = £2.20
Not recommended for use in children									
Ensure® Plus milkshake style (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	632 kJ (150 kcal)	6.3 g caseinates, milk protein isolate, soya protein isolate	20.2 g sucrose (sugars 6.5 g)	4.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also continuous ambulatory peritoneal dialysis (CAPD), haemodialysis.	Ensure Plus Commence liquid assorted: 2000 ml = £11.31; Ensure Plus milkshake style liquid: banana, chocolate, coffee, fruits of the forest, neutral, peach, raspberry, strawberry, vanilla 200 ml = £1.12
Not suitable for use in child under 1 year; not recommended for use in children									
Ensure® Plus yoghurt style (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g milk protein isolate, whey protein	20.2 g sucrose (sugars 11.8 g)	4.92 g	Nil	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also continuous ambulatory peritoneal dialysis (CAPD), haemodialysis.	Ensure Plus yoghurt style liquid: orchard peach, strawberry swirl 200 ml = £1.16
Not suitable for use in child under 1 year; not recommended for use in children									
Fortisip® Bottle (Nutricia Ltd)	Liquid (sip feed) per 100 mL	625 kJ (150 kcal)	5.9 g milk proteins	18.4 g sucrose (sugars 6.7 g)	5.8 g	Nil	Contains residual lactose, soya. Gluten free	Borderline substances standard ACBS indications p. 1655	Fortisip Bottle: banana, caramel, chocolate, neutral, orange, strawberry, tropical, vanilla 200 ml = £1.12; Fortisip Range Starter Pack liquid: 2 litre = £20.20
Not suitable for use in child under 3 years									
Fortisip® Yogurt Style (Nutricia Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.9 g cow's milk, whey protein	18.7 g sucrose (sugars 10.8 g)	5.8 g	Nil	Contains lactose, soya	Borderline substances standard ACBS indications p. 1655; except dysphagia.	Fortisip Range Starter Pack liquid: 2 litre = £20.20; Fortisip Yogurt Style liquid: peach & orange, raspberry, vanilla & lemon 200 ml = £2.33
Not suitable for use in child under 1 year; not recommended for child under 5 years									
Fresubin® Energy Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk protein	18.8 g sucrose (sugars 3.9-6.3 g)	5.8 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Fresubin Energy liquid: banana, blackcurrant, cappuccino, chocolate, lemon, strawberry, tropical fruits, vanilla 200 ml = £1.40
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® Energy Fibre Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk protein	17.8 g sucrose (sugars 5-6.4 g)	5.8 g	2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655.	Fresubin Energy Fibre liquid: banana, caramel, cherry, chocolate, strawberry, vanilla 200 ml = £2.23
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Nutritional supplements: 1.5 kcal/mL and 5 g (or more) protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Protein Energy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g milk protein	12.1-12.4 g maltodextrin and sucrose (sugars 6.5-7.4 g)	6.7 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also CAPD, haemodialysis.	Fresubin Protein Energy drink: cappuccino, chocolate, tropical fruits, vanilla, wild strawberry 200 ml = £2.19
Not suitable for use in child under 3 years; not recommended in child under 6 years									
Fresubin® Thickened (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g milk protein	12 g sucrose (sugars 7.3 g)	6.7 g	0.83 g	Contains soya, residual lactose. Gluten-free	Dysphagia or disease-related malnutrition.	Fresubin Thickened Level 2: vanilla, wild strawberry 800 ml = £9.40; Fresubin Thickened Level 3: vanilla, wild strawberry 800 ml = £9.40
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® YOcrème (Fresenius Kabi Ltd)	Semi-solid per 100 g	630 kJ (150 kcal)	7.5 g milk, whey proteins	19.3 g sucrose (sugars 17.4 g)	4.7 g	0.4 g	Contains lactose, soya. Gluten-free	Patients with or at risk of malnutrition in particular with increased energy or protein needs or dysphagia.	Fresubin YOcrème dessert: apricot-peach, biscuit, lemon, raspberry 500 gram = £8.68
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® YoDrink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk, whey proteins	19.5 g sucrose (sugars 15.4 g)	4.7 g	0.1 g	Contains lactose, soya. Gluten-free	Dietary management of patients with or at risk of malnutrition who are not able to meet their nutritional requirements from ordinary foods alone. Includes elderly patients, patients with chronic wasting disease (cancer, HIV/AIDS), peri-operative patients, further patients with evidence based indication for oral nutritional supplementation (eg pre- and post-organ transplantation, inflammatory bowel disease).	Fresubin YoDrink: apricot-peach, lemon, raspberry 200 ml = £1.44
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Resource® Energy (Nestle Health Science)	Liquid (sip feed) per 100 mL	637 kJ (151 kcal)	5.6 g milk protein	21 g (sugars 5.7 g)	5 g	Less than 0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula.	Resource Energy liquid: apricot, chocolate, coffee, strawberry & raspberry, vanilla 800 ml = £8.45
Not suitable for use in child under 3 years									

Nutritional supplements: Less than 1.5 kcal/mL and 5g (or more) protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
EnergieShake® Advance 1.3kcal (Anaiah Healthcare PVT Ltd)	Liquid per 100 mL	544 kJ (130 kcal)	7 g milk protein	13 g (sugars 0.85 g)	5 g	2 g	Contains fish oil, soya. Gluten-free	Dietary management of patients with or at risk of disease-related malnutrition, or nutritionally at-risk older adults. Suitable for frail elderly (over 65 years of age, with a BMI under 23 kg/m ²), where clinical assessment and screening shows the individual to be at risk of under-nutrition.	EnergieShake Advance 1.3kcal oral liquid: chocolate, vanilla 200 ml = £1.25
Not recommended for use in children									
Ensure® Plus Crème (Abbott Laboratories Ltd)	Semi-solid per 100 g	574 kJ (137 kcal)	5.68 g milk protein isolate, soya protein isolate	18.4 g (sugars 12.3 g)	4.47 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655; also CAPD, haemodialysis.	Ensure Plus Creme: banana, chocolate, neutral, vanilla 500 gram = £8.36
Not suitable for use in child under 1 year; not recommended for use in children									
Nutilis® Fruit Dessert Level 4 (Nutricia Ltd)	Semi-Solid per 100 g	575 kJ (137 kcal)	6.9 g whey protein isolate	17 g (sugars 11.5 g)	4 g	2.6 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1655 except bowel fistula; also CAPD, haemodialysis.	Nutilis Fruit Dessert Level 4: apple, strawberry 450 gram = £7.74
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Oral Impact® (Nestle Health Science)	Powder per 100 g	1763 kJ (418 kcal)	24 g whey protein	56 g sucrose (sugars 30 g)	10 g (MCT 30%)	4.1 g	Contains fish oil, lactose, soya. Gluten-free	Pre-operative nutritional supplement for patients who are malnourished or at risk of becoming malnourished.	Oral Impact oral powder 74g sachets tropical: 5 sachet = £18.20
Powder 74 g reconstituted with 250 ml water provides: protein 18 g, carbohydrate 41 g, fat 7.4 g, energy 1304 kJ (309 kcal) Not suitable for use in children									
Nutritional supplements: More than 1.5 kcal/mL and 5g (or more) protein/100 mL

KetoClassic 3:1 Breakfast muesli: 600 gram = £34.98
Not suitable for use in child under 3 years									
KetoClassic® 3:1 Breakfast Porridge (KetoCare Foods Ltd)	Solid per 100 g	2649 kJ (643 kcal)	11.7 g	7.8 g (sugars 5.4 g)	59.1 g	16.7 g	Contains lactose, nuts, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Breakfast porridge: 600 gram = £34.98
Not suitable for use in child under 3 years									
KetoClassic® 3:1 Meal (KetoCare Foods Ltd)	Semi-solid per 100 g	936-1182 kJ (224-287 kcal)	5.1-5.2 g	2-3.7 g (sugars 0.8-2.6 g)	21.7-26.7 g	0.4-2.1 g	Contains egg and mustard (bolognese flavour), lactose (chicken flavour), and meat	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Meal: chicken 135g pouches 14 pouch = £76.95; 30 pouch = £162.90; bolognese 126g pouches 14 pouch = £76.02
Not suitable for use in child under 3 years									

KetoClassic [®] 3:1 Savoury (KetoCare Foods Ltd)	Solid per 100 g	2190 kJ (531 kcal)	9 g	7.3 g (sugars 1.2 g)	48.7 g	13.7 g	Contains egg, lactose, nuts	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Savoury meal: 840 gram = £43.40
Not suitable for use in child under 3 years									
KetoVie [®] 4:1 (Cambrooke Therapeutics)	Liquid (sip feed) per 100 mL	602 kJ (144 kcal)	3.4 g whey protein	1.9 g	14.2 g	1.8 g	Contains lactose, soya. Minerals/100 mL: Na 4.7 mmol K 2.8 mmol Ca 2.6 mmol P 3.2 mmol	Intractable epilepsy and other conditions where a ketogenic diet is indicated.	KetoVie 4:1 liquid: chocolate 250 ml = £5.54; vanilla 250 ml = £5.54
Not suitable for use in child under 1 year									
Keyo [®] (Vitafo International Ltd)	Semi-solid per 100 g	1280 kJ (310 kcal)	8 g milk protein isolate	2 g cocoa powder (sugars 1.5 g)	30 g	Nil	Contains fish oil Minerals/100 g: Na 4.9 mmol K 7.3 mmol Ca 4 mmol P 6.1 mmol	Epilepsy in a ketogenic diet, glut 1 deficiency syndrome or other conditions requiring a ketogenic diet.	Keyo semi-solid food 100g pots: 4 pot = £27.20; 48 pot = £244.85
Not suitable for use in child under 3 years									
Liquigen [®] (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1865 kJ (454 kcal)	Nil	Nil	50.4 g (MCT 97.4%)	Nil		Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, surgery of the intestine, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, a ketogenic diet in the management of epilepsy, and in type 1 hyperlipoproteinaemia.	Liquigen emulsion: 250 ml = £10.63
MCT Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	95 g MCT 100 %	Nil		Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, surgery of the intestine, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia.	MCT oil: 500 ml = £16.86
Modulen IBD [®] (Nestle Health Science)	Standard dilution (20 % w/v) of powder (sip feed) per 100 mL	414 kJ (100 kcal)	3.6 g casein	1.1 g (sugars 4.2 g)	4.6 g	Nil	Contains residual lactose, soya. Gluten-free Minerals/100 mL: Na 1.5 mmol K 3 mmol Ca 2.2 mmol P 1.9 mmol	Sole source of nutrition during active phase of Crohn's disease, and nutritional support during remission phase for malnourished patients.	Modulen IBD powder: 400 gram = £16.19
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g Not suitable for use in child under 6 years									

Table 3 Specialised formulas (product list continued)Specialised formulas: Infant and child see *BNF for Children*

Specialised formulas for specific clinical conditions

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Monogen [®] (Nutricia Ltd)	Standard dilution (16.8% w/v) of powder per 100 mL	312 kJ (74 kcal)	2.2 g caseinate, whey protein	11.5 g (sugars 2 g)	2.2 g (MCT 84%)	Nil	Contains lactose, nuts	For the dietary management of disorders requiring a low LCT, high MCT intake, such as long chain fatty acid oxidation defects (long-chain acyl-CoA dehydrogenase deficiency (LCAD), carnitine palmitoyl transferase deficiency (CPTD)), primary and secondary lipoprotein lipase deficiency (hyperlipoproteinaemia type 1) chylothorax, lymphangiectasia.	Monogen powder: 400 gram = £23.30
Powder provides: protein 12.8 g, carbohydrate 68.6 g, fat 12.9 g, energy 1859 kJ (441 kcal)/100 g									
Nepro [®] HP (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	752 kJ (180 kcal)	8.1 g caseinates, milk protein isolate	14.7 g (sugars 3.2 g)	9.8 g	1.3 g	Contains meat derivatives, residual lactose, soya. Gluten-free Minerals/100 mL: Na 3 mmol K 2.7 mmol Ca 2.6 mmol P 2.3 mmol	Patients with chronic renal failure who are on haemodialysis or complete ambulatory peritoneal dialysis (CAPD), or patients with cirrhosis or other conditions requiring a high energy, low fluid, low electrolyte diet.	Nepro HP liquid: vanilla 220 ml = £3.66; 500 ml = £8.39; strawberry 220 ml = £3.66
Not recommended for use in children									
ProSure [®] (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	536 kJ (127 kcal)	6.7 g caseinates, milk protein isolate	18.3 g sucrose (sugars 6.5 g)	2.6 g	2.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Pancreatic cancer, oesophageal cancer and patients with lung cancer who are undergoing chemotherapy.	ProSure liquid: 220 ml = £3.76
Not suitable for use in child under 1 year; not recommended for use in children									
Renamil [®] (Stanningley Pharma Ltd)	Powder per 100 g	2012 kJ (479 kcal)	5 g milk protein, whey protein isolate	71.2 g (sugars 6.8 g)	19.3 g	Nil	Contains lactose, soya. Gluten-free Minerals/100 mL: Na 3 mmol K 0.1 mmol Ca 3.7 mmol P 0.8 mmol	Chronic renal failure.	Renamil powder 100g sachets: 10 sachet = £25.40
Not suitable for use in child under 1 year									
Renastep [®] (Vitafo International Ltd)	Liquid (sip or tube feed) per 100 mL	836 kJ (200 kcal)	4 g milk protein	21 g (sugars 3.4 g)	11.1 g	Nil	Contains fish oil Minerals/100 mL: Na 3.6 mmol K 0.9 mmol Ca 1.2 mmol P 1.1 mmol	Renal failure.	Renastep liquid: 125 ml = £4.76
Not suitable for use in child under 3 years									

Respifor® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	635 kJ (150 kcal)	7.5 g milk protein	22.6 g (sugars 6 g)	3.3 g	Nil	Contains lactose, soya Minerals/100 mL: Na 2.4 mmol K 2.8 mmol Ca 3.9 mmol P 3.2 mmol	Disease related malnutrition in patients with chronic obstructive pulmonary disease (COPD) with a body mass index (BMI) of less than 20.	Respifor milkshake style liquid: chocolate, strawberry, vanilla 500 mL = £9.80
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Supportan® (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g milk protein	11.6 g sucrose (sugars 7 g)	6.7 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free Minerals/100 mL: Na2.1 mmol K3.3 mmol Ca5.1 mmol P3.9 mmol	Patients with pancreatic cancer or patients with lung cancer undergoing chemotherapy.	Supportan drink: cappuccino, tropical fruits 800 ml = £11.84
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Table 4 Feed supplements									
High-energy supplements									
High-energy supplements: carbohydrate									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Maxijul® Super Soluble (Nutricia Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g (sugars 8.6 g)	Nil	Nil	Gluten-free, lactose-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Maxijul Super Soluble: powder 132g sachets 4 sachet = £7.43; powder 200 gram = £2.98; 25000 gram = £178.69
Powder 75 g reconstituted with 150 ml water provides: protein Nil, carbohydrate 31.4 g, fat Nil, energy 533 kJ (125 kcal)/100 g									
Polycal® liquid (Nutricia Ltd)	Liquid per 100 mL	1050 kJ (247 kcal)	Nil	61.9 g (sugars 12.2 g)	Nil	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal liquid: orange 200 ml = £1.96; neutral 200 ml = £1.96
Not suitable for use in child under 3 years									
Polycal® powder (Nutricia Ltd)	Standard dilution (10% w/v) of powder per 100 mL	82 kJ (19 kcal)	Nil	4.8 g (sugars 0.3 g)	Nil	Nil		Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £4.96
Powder provides: protein Nil g, carbohydrate 96 g, fat Nil g, energy 1630 kJ (384 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Vitajoule® (Vitaflo International Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil		Disease related malnutrition, malabsorption states, other conditions requiring fortification with carbohydrate and as a carbohydrate source in modular feeds.	Vitajoule powder: 500 gram = £5.04

High-energy supplements: fat									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Betaquik® (Vitafo International Ltd)	Liquid (sip feed) per 100 mL	777 kJ (189 kcal)	Nil	Nil	21 g (MCT 95%)	Nil		Ketogenic diet or conditions requiring a source of MCT.	Betaquik liquid: 225 ml = £3.69
Not suitable for use in child under 3 years									
Calogen® (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1850 kJ (450 kcal)	Nil	0.1 g (sugar Nil)	50 g	Nil	Banana and strawberry flavours not suitable for child under 3 years. Gluten-free, lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat supplement, with or without fluid and electrolyte restrictions.	Calogen emulsion: banana 500 ml = £12.41; neutral, strawberry 200 ml = £5.04; 500 ml = £12.41
Fresubin® 5kcal shot (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	2100 kJ (500 kcal)	Nil	4 g sucrose (sugars 4 g)	53.8 g	0.4 g	Gluten-free, lactose-free	Disease related malnutrition malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid or electrolyte restrictions.	Fresubin 5kcal shot drink: lemon, neutral 480 ml = £11.96
Not suitable for use in child under 3 years									
FAT AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal® Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 38%)	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Duocal Super Soluble powder: 400 gram = £20.76
Scandishake® Mix (Nutricia Ltd)	Powder per 100 g	2120 kJ (507 kcal)	4.8 g caseinates	67 g (sugars 20.5 g)	24.5 g	Nil	Contains lactose, soya.	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement.	Scandishake Mix oral powder 85g sachets: banana, caramel, chocolate, strawberry, unflavoured, vanilla 6 sachet = £15.96
Powder 85 g reconstituted with 240 mL whole milk provides: protein 12.1 g, carbohydrate 68.2 g, fat 29.6 g, energy 2460 kJ (587 kcal)									
Not suitable for use in child under 3 years									
High-energy supplements: protein									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource® jelly (Nutrino Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein, whey protein isolate	Less than 1 g	Nil	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource jelly: blackcurrant, fruit punch, lime, orange 118 ml = £2.04
Not recommended for child under 3 years									
ProSource® TF (Nutrino Ltd)	Liquid (tube feed) per 100 mL	373 kJ (98 kcal)	24.4 g collagen protein, protein equivalent (amino acids)	2.2 g (sugars Nil)	Less than 1 g	Less than 1 g	Contains bovine derivatives. Gluten-free, lactose-free	Hypoproteinaemia.	ProSource TF liquid 45ml sachets: 100 sachet = £133.75
Not recommended for child under 3 years									

Protifa® (Nutricia Ltd)	Powder per 100 g	1560 kJ (368 kcal)	87.2 g milk protein	Less than 1.5 g	1.6 g	Nil	Contains residual lactose, soya. Gluten-free	Hypoproteinaemia.	Protifar powder: 225 gram = £10.09
Powder 2.5 g provides: protein 2.2 g, carbohydrate less than 0.04 g, fat 0.04 g, energy 39 kJ (9 kcal) Not suitable for use in child under 3 years									
Renapro Shot® (Stanningley Pharma Ltd)	Liquid (sip or tube feed) per 100ml	711 kJ (167 kcal)	33 g collagen protein	4.9 g (fructose 4.9 g)	Less than 0.5 g	Nil	Contains beef derivatives. Gluten-free	Hypoproteinaemia.	Renapro Shot 60ml bottles: cola, peach, wild berry 30 bottle = £69.60
Not suitable for use in child under 1 year									
Renapro® (Stanningley Pharma Ltd)	Powder per 100 g	1558 kJ (372 kcal)	90 g whey protein	3.4 g	1 g	Nil	Gluten-free	Dialysis, hypoproteinaemia.	Renapro powder 20g sachets: 30 sachet = £69.60
Powder 20 g reconstituted with 60-100 mL cold water provides: protein 18 g, carbohydrate 0.7 g, fat 0.2 g, energy 312 kJ (74 kcal) Not suitable for use in child under 1 year									
PROTEIN AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine® (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Lactose-free	Chronic renal failure, hypoproteinaemia, wound fistula leakage with excessive protein loss, haemodialysis and other conditions requiring a controlled nitrogen or amino acid supplements intake.	Dialamine powder: 400 gram = £84.34
Powder provides: protein 25 g, carbohydrate 65 g, fat Nil g energy 1530 kJ (360 kcal)/100 g Not suitable for use in child under 6 months									
ProSource® liquid (Nutrinovo Ltd)	Liquid (sip or tube feed) per 100 mL	1400 kJ (333 kcal)	33.3 g collagen protein, whey protein isolate	50 g (sugars 26.7 g)	Less than 1 g	Less than 1 g	Contains residual lactose, porcine derivatives. Gluten-free	Biochemically proven hypoproteinaemia.	ProSource liquid 30ml sachets: citrus berry, lemon, orange creme, neutral 100 sachet = £110.11
Not recommended for child under 3 years									
ProSource® Plus (Nutrinovo Ltd)	Liquid (sip and tube feed) per 100 mL	1400 kJ (333 kcal)	50 g collagen protein, whey protein isolate	36.7 g sucrose (sugars 33.3 g)	Less than 1 g	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource Plus liquid 30ml sachets: citrus berry, neutral, orange creme 50 sachet = £78.32; 100 sachet = £156.63
Not recommended for child under 3 years									
PROTEIN, FAT, AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® Extra (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1650 kJ (400 kcal)	5 g caseinates, whey protein hydrolysate	4.5 g (sugars 3.5 g)	40.3 g	Nil	Contains residual lactose. Gluten-free	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid restriction.	Calogen Extra Shots emulsion: neutral, strawberry 240 ml = £6.00; Calogen Extra emulsion: strawberry, neutral 200 ml = £5.10
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

PROTEIN, FAT, AND CARBOHYDRATE (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calshake [®] (Fresenius Kabi Ltd)	Standard dilution (28% w/v) of powder per 100 ml	795 kJ (190 kcal)	3.8 g milk protein	22.2 g (sugars 7 g)	9.5 g	Less than 0.15 g	Contains lactose. Gluten-free. Neutral flavour not suitable for use in child under 1 year	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Calshake powder 87g sachets: banana, neutral, strawberry, vanilla 7 sachet = £18.41; Calshake powder 90g sachets chocolate: 7 sachet = £18.41
Powder provides: protein 4.3 g, carbohydrate 67.3 g, fat 24.1 g, energy 2100 kJ (500 kcal)/100 g Not suitable for use in child under 3 years; not recommended for child under 6 years									
Enshake [®] (Abbott Laboratories Ltd)	Standard dilution (31.1% w/v) of powder per 100 mL	815 kJ (194 kcal)	5.2 g caseinate, milk, soya protein isolates	25.5 g 24.7 g corn syrup (sugars 7.4 g)	8 g	Nil	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Enshake oral powder 96.5g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £15.94
Powder provides: protein 8.4 g, carbohydrate 69.5 g, fat 15.6 g, energy 1902 kJ (452 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child under 6 years									
MCTprocal [®] (Vitafo International Ltd)	Powder per 100 g	2907 kJ (703 kcal)	12.2 g milk protein	20.6 g (sugars 3.1 g)	63.5 g (MCT 96%)	Nil	Contains lactose	Disorders of long chain fatty acid oxidation, fat malabsorption and other disorders requiring a low LCT, high MCT supplement.	MCTprocal oral powder 16g sachets: 30 sachet = £27.42
Not suitable for use in child under 3 years									
Pro-Cal [®] powder (Vitafo International Ltd)	Powder per 100 g	2764 kJ (667 kcal)	13.6 g milk protein	28.2 g (sugars 16 g)	55.5 g	Nil	Contains lactose. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement (with protein).	Pro-Cal powder: 510 g = £16.93; 1500 g = £34.50; 12500 g = £245.32; Pro-Cal powder: starter pack 8 sachet = £5.77; 15g sachets 30 sachet = £21.76; 200 sachet = £81.47
Powder 15g reconstituted with 100 ml water provides: protein 2 g, carbohydrate 4.2 g, fat 8.3 g, energy 415 kJ (100 kcal) Not suitable for use in child under 3 years									
Pro-Cal [®] Shot (Vitafo International Ltd)	Liquid (sip feed) per 100 mL	1385 kJ (334 kcal)	6.7 g caseinates, milk proteins	13.4 g lactose (sugars 13.3 g)	28.2 g	Nil	Contains lactose, soya. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement (with protein).	Pro-Cal: shot banana, shot neutral, shot strawberry 720ml = £16.04 120 ml =; 720 ml = £16.04; shot starter pack 360 ml = £8.02
Not suitable for use in child under 3 years									
Vitasavoury [®] (Vitafo International Ltd)	Powder per 100 g	2562 kJ (619 kcal)	12 g whey protein isolate	22.5 g (sugars 1.4 g)	52 g	6.4 g	Contains celery (golden vegetable flavour), meat and soya (chicken flavour), and lactose	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with energy and protein.	Vitasavoury powder 50g sachets: chicken, golden vegetable 10 sachet = £21.90
Not suitable for use in child under 3 years									

Fibre, vitamin, and mineral supplements

High-fibre supplements

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
HyFiber® (Nutrinovo Ltd)	Liquid (sip or tube feed) per 100 mL	484 kJ (119 kcal)	Nil	10.4 g (sugars 10.4 g)	Nil	39 g	Gluten-free, lactose-free	Bowel transit disorder in tube fed patients.	HyFiber liquid 30ml sachets: 100 sachet = £84.00
Not recommended for child under 3 years									
Optifibre® (Nestle Health Science)	Powder per 100 g	816 kJ (202 kcal)	less than 1.5 g	6 g partially hydrolysed guar gum (sugars 6 g)	Nil	86 g	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1655 except dysphagia.	Optifibre: powder 5g sachets 16 sachet = £4.60; powder 250 gram = £11.34
Not suitable for use in child under 5 years									

Vitamin and Mineral supplements

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
DEKAs® Essential (Alveolus Biomedical B.V.)	Solid per 100 g	2642 kJ (631 kcal)	Nil	50 g	49 g	Nil	Contains fish gelatin	Cystic fibrosis.	DEKAs Essential capsules: 60 capsule = £36.51
Not suitable for child under 4 years; not recommended for child over 10 years									
DEKAs® Plus chewable tablets (Alveolus Biomedical B.V.)	Solid per 100 g	1577 kJ (377 kcal)	2.5 g	88 g (sugars 70 g)	1.8 g	Nil		Cystic fibrosis.	DEKAs Plus chewable tablets: 60 tablet = £42.58
Not suitable for use in child under 4 years									
DEKAs® Plus liquid (Alveolus Biomedical B.V.)	Liquid per 100 mL	400 kJ (100 kcal)	2 g	22 g	Nil	Nil		Cystic fibrosis.	DEKAs Plus liquid: 60 ml = £33.24
Not recommended for child over 3 years									
DEKAs® Plus softgels capsules (Alveolus Biomedical B.V.)	Solid per 100 g	2090 kJ (500 kcal)	25 g	22 g (sugars less than 1 g)	43 g	Nil	Contains bovine derivatives, soya	Cystic fibrosis.	DEKAs Plus softgels capsules: 60 capsule = £42.58
Not suitable for use in child under 10 years									
FruitiVits® (Vitafo International Ltd)	Powder per 100 g	168 kJ (40 kcal)	Nil	8.3 g (sugars 0.5 g)	Nil	3.3 g		Restrictive therapeutic diets.	FruitiVits oral powder 6g sachets: 30 sachet = £74.19
Powder 6 g reconstituted with 60 ml water provides: protein nil, carbohydrate 0.5 g, fat nil, energy 10 kJ (2.4 kcal) Not suitable for use in child under 3 years of age; not recommended for child over 10 years									
Renavit® (Stanningley Pharma Ltd)	Solid per 100 g	582 kJ (140 kcal)	Nil	29 g	Nil	Nil		Dietary management of water-soluble vitamin deficiency in adults with renal failure on dialysis	Renavit tablets: 100 tablet = £12.86
Not suitable for use in children									

Feed additives

Special additives for conditions of intolerance

Glucose liquid

- For use as an energy supplement in sucrose-isomaltase deficiency.
- LIQUID, contains syrups, hydrolysed starch, sulphur dioxide.

Glucose liquid (J M Loveridge Ltd)

280 gram (ACBS) · No NHS indicative price available | 500 gram (ACBS) · NHS indicative price = £4.39

Glucose powder

- For use as an energy supplement in sucrose-isomaltase deficiency.
- POWDER, contains dextrose monohydrate.

Glucose powder for oral use BP 1980 (Thornton & Ross Ltd)

500 gram (ACBS) · NHS indicative price = £1.75 · Drug Tariff (Part VIII A Category C) price = £1.75

Feed thickeners and pre-thickened drinks

Instant Carobel®

- For thickening of liquids or foods in the treatment of vomiting.
- POWDER, contains residual lactose.

Instant Carobel powder (Cow & Gate Ltd)

135 gram (ACBS) · NHS indicative price = £3.04

Multi-thick®

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified maize starch (sulphur dioxide and sulphites), residual lactose. Gluten-free.

Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

Nutilis® Clear

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains guar gum, maltodextrin, xanthan gum. Gluten-free, lactose-free.

Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

Nutilis Clear powder 1.25g sachets (Nutricia Ltd)

50 sachet (ACBS) · NHS indicative price = £11.65

Nutilis® Powder

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years of age.

POWDER, gluten-free and lactose-free.

Nutilis powder (Nutricia Ltd)

300 gram (ACBS) · NHS indicative price = £5.80

Osmosp Clear and Thick Instant Thickener

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, xanthan gum. Gluten-free.

Osmosp Clear & Thick Instant Thickener powder (Spectral Pharmaceuticals Ltd)

135 gram (ACBS) · NHS indicative price = £3.95

Resource® ThickenUp®

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

125 ml (ACBS) · NHS indicative price = £18.40

TYR sphere[®] 20

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K. POWDER, protein 56 g, carbohydrate 18 g, fat 4.7 g, energy 1432 kJ (338 kcal)/100 g.

TYR sphere20 oral powder 35g sachets (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £550.92

TYR[®] Easy Shake and Go

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 45 g, carbohydrate 38 g, fat less than 0.5 g, energy 1542 kJ (363 kcal)/100 g.

TYR Easy Shake & Go oral powder 34g sachets (POA Pharma Scandinavia AB)

30 sachet (ACBS) · NHS indicative price = £362.00

XPHEN TYR Tyrosidon® Free AA Mix

► Nutritional supplement for the dietary management of tyrosinaemia where plasma methionine levels are normal.

POWDER, protein 77 g, carbohydrate 4.5 g, fat Nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £213.65

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

1 Warning: This medicine may make you sleepy

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also

- label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.
- Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.
- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**
- Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd**
- To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and decaffeinated (low alcohol) drink is covered by the patient information leaflet.
- Also to be used as for label 2 but where alcohol is not an issue.
- 4 Warning: Do not drink alcohol**
- Rhybudd: Peidiwch ag yfed alcohol**
- To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.
- Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.
- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**
- Peidiwch â chymryd meddyginiaethau camdrefiliad 2 awr cyn neu ar ôl y feddyginiaeth hon**
- To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.
- Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.
- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
- Peidiwch â chymryd meddyginiaethau camdrefiliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon**
- To be used on *preparations containing ciprofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.
- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
- Peidiwch â chymryd llaeth, meddyginiaethau camdrefiliad, neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl chymryd y feddyginiaeth hon**
- To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines;
- when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).
- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**
- Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthyfch am stopio**
- To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).
- Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.
- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**
- Gadewch yr un faint o amser rhwng pob dŵs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio**
- To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.
- The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.
- 10 Warning: Read the additional information given with this medicine**
- Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon**
- To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.
- This label may also be used on other preparations to remind the patient of the instructions that have been given.
- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**
- Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul**
- To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.
- 12 Do not take anything containing aspirin while taking this medicine**
- Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon**
- To be used on *preparations containing sulfonpyrazone* whose activity is reduced by aspirin.
- Label 12 should not be used for anticoagulants since label 10 is more appropriate.
- 13 Dissolve or mix with water before taking**
- Gadewch i doddi mewn dŵr cyn ei gymryd**
- To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.
- 14 This medicine may colour your urine. This is harmless**
- Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg**
- To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

- 15 Caution: flammable.** Keep your body away from fire or flames after you have put on the medicine
 Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.*
- 16 Dissolve the tablet under your tongue—do not swallow.** Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
 Rhwch y dabled i doddî dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**
 Peidiwch â chymryd mwy na... mewn 24 awr
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**
 Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**
 Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night.* On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) *for anxiolytics prescribed to be taken at night.*
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**
 Cymerwch gyda neu ar ôl bwyd
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food.*
 Patients should be advised that a *small amount of food is sufficient.*
- 22 Take 30 to 60 minutes before food**
 Cymerwch 30 i 60 munud cyn bwyd
 To be used on some preparations *whose absorption is thereby improved.*
 Most oral antibacterials require label 23 instead (see below).
- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**
 Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach.*
- 24 Suck or chew this medicine**
 Bydd angen cnoi neu sugno'r feddyginiaeth hon
 To be used on *preparations that should be sucked or chewed.*
 The pharmacist should use discretion as to which of these words is appropriate.
- 25 Swallow this medicine whole. Do not chew or crush**
 Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân
 To be used on *preparations that are enteric-coated or designed for modified-release.*
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole.*
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26 Dissolve this medicine under your tongue**
 Gadewch i'r feddyginiaeth hon doddî o dan y tafod
 To be used on *preparations designed for sublingual use.* Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27 Take with a full glass of water**
 Cymerwch gyda llond gwydr o ddŵr
 To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose).* The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28 Spread thinly on the affected skin only**
 Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**
 Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr
 To be used on containers of *dispensed solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis.* The dose form should be specified, e.g. tablets or capsules.
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**
 Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn
 To be used on all containers of *dispensed preparations containing paracetamol.*
- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**
 Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon
 To be used on containers of *dispensed preparations containing aspirin when the name on the label does not include the word 'aspirin'.*

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic

debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

Basic wound contact dressings

Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings. Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the

Wound contact material for different types of wounds

Wound PINK (epithelialising)		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1699 Vapour-permeable film p. 1703 Soft polymer p. 1704 Hydrocolloid p. 1706	Soft ploymer p. 1704 Foam, low absorbent p. 1707 Alginate p. 1708	
Wound RED (granulating)		
Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1699 Soft polymer p. 1704 Hydrocolloid p. 1706 Foam, low absorbent p. 1707	Hydrocolloid-fibrous p. 1706 Foam p. 1707 Alginate p. 1708	Foam with extra absorbency p. 1707 Hydrocolloid-fibrous p. 1706 Alginate p. 1708
Wound YELLOW (Sloughy) (granulating)		
Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1702 Hydrocolloid p. 1706	Hydrocolloid-fibrous p. 1706 Alginate p. 1708	Hydrocolloid-fibrous p. 1706 Alginate p. 1708 Capillary-action p. 1709
Wound BLACK (Necrotic/ Eschar)		
Consider mechanical debridement alongside autolytic debridement		
Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1702 Hydrocolloid p. 1706	Hydrocolloid p. 1706 Hydrocolloid-fibrous p. 1706 Foam p. 1707	Seek advice from wound care specialist
Wounds with signs of infection		
Consider systemic antibacterials if appropriate; also consider odour-absorbent dressings. For malodorous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence with honey p. 1709 Low adherence with iodine p. 1710 Low adherence with silver p. 1710 Hydrocolloid with silver p. 1711	Hydrocolloid-fibrous with silver p. 1711 Foam with silver p. 1711 Alginate with silver p. 1710 Honey-topical p. 1709 Cadexomer-iodine p. 1710	Hydrocolloid-fibrous with silver p. 1711 Foam extra absorbent, with silver p. 1711 Alginate with honey p. 1709 Alginate with silver p. 1710
Note In each section of this table the dressings are listed in order of increasing absorbency. Some wound contact (primary) dressings require a secondary dressing		

dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet[®]) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

Knitted polyester primary dressing**Atrauman**

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

Atrauman dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.82, 20cm × 30cm= £2.25, 5cm × 5cm= £0.35, 7.5cm × 10cm= £0.36

Knitted viscose primary dressing**N-A Dressing**

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

N-A Ultra

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A Ultra dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.64, 9.5cm × 9.5cm= £0.34

Profore

Warp knitted fabric manufactured from a bright viscose monofilament.

Profore (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.33

Tricotex

Warp knitted fabric manufactured from a bright viscose monofilament.

Tricotex dressing (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.36

Paraffin Gauze Dressing**Cuticell**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading
Cuticell (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.30

Jelonet

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Jelonet (Smith & Nephew Healthcare Ltd) dressing 10cm × 10cm= £0.43

Neotulle

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Neotulle (Neomedic Ltd) dressing 10cm × 10cm= £0.29

Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

*Absorbent cellulose dressing***CelluDress**

Absorbent Cellulose Dressing with Fluid Repellent Backing
CelluDress dressing (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

Eclipse

Absorbent Cellulose Dressing with Fluid Repellent Backing
Eclipse (Advancis Medical) Boot dressing 60cm × 70cm= £14.24, dressing 15cm × 15cm= £1.00, 20cm × 30cm= £2.21, 60cm × 40cm= £8.42

Exu-Dry

Absorbent Cellulose Dressing with Fluid Repellent Backing
Exu-Dry dressing (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.19, 15cm × 23cm= £2.42, 23cm × 38cm= £5.62

Mesorb

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

Mesorb dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.64, 10cm × 15cm= £0.84, 10cm × 20cm= £1.03, 15cm × 20cm= £1.47, 20cm × 25cm= £2.32, 20cm × 30cm= £2.63

Zetuvit E

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

Zetuvit E (Paul Hartmann Ltd) non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.29, sterile dressing 10cm × 10cm= £0.22, 10cm × 20cm= £0.26, 20cm × 20cm= £0.41, 20cm × 40cm= £1.15

*Absorbent perforated dressing***Adpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Adpore dressing (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

Cosmopore E

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cosmopore E dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.47, 10cm × 25cm= £0.58, 10cm × 35cm= £0.81, 5cm × 7.2cm= £0.08, 8cm × 10cm= £0.18, 8cm × 15cm= £0.29

Cutiplast Steril

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cutiplast Steril dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.32, 10cm × 25cm= £0.33, 10cm × 30cm= £0.45, 8cm × 10cm= £0.11, 8cm × 15cm= £0.26

Leukomed

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Leukomed dressing (BSN medical Ltd) 10cm × 20cm= £0.45, 10cm × 25cm= £0.51, 10cm × 30cm= £0.66, 10cm × 35cm= £0.76, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.19, 8cm × 15cm= £0.34

Medipore + Pad

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medipore + Pads dressing (3M Health Care Ltd) 10cm × 10cm= £0.16, 10cm × 15cm= £0.25, 10cm × 20cm= £0.38, 10cm × 25cm= £0.47, 10cm × 35cm= £0.65, 5cm × 7.2cm= £0.08

Medisafe

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medisafe dressing (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

Mepore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Mepore dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.37, 7cm × 8cm= £0.11, 9cm × 20cm= £0.45, 9cm × 25cm= £0.62, 9cm × 30cm= £0.71, 9cm × 35cm= £0.78

PremierPore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

PremierPore dressing (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

Primapore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Primapore dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.52, 10cm × 30cm= £0.66, 10cm × 35cm= £1.01, 6cm × 8.3cm= £0.19, 8cm × 10cm= £0.20, 8cm × 15cm= £0.35

Softpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Softpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

*Absorbent perforated plastic film faced dressing***Absopad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Absopad dressing (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

Askina Pad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Askina (B.Braun Medical Ltd) Pad dressing 10cm × 10cm= £0.22

Melolin

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Melolin dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.29, 20cm × 10cm= £0.56, 5cm × 5cm= £0.18

Skintact

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Skintact dressing (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

Solvaline N

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Solvaline N dressing (Lohmann & Rauscher) 10cm × 10cm= £0.19, 20cm × 10cm= £0.38, 5cm × 5cm= £0.11

Telfa

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Telfa dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

*Super absorbent cellulose and polymer primary dressing***Curea P1**

Super absorbent cellulose and polymer primary dressing.

Curea P1 dressing (Regen Medical) 10cm × 10cm square= £2.17, 10cm × 20cm rectangular= £3.67, 10cm × 30cm rectangular= £5.25, 12cm × 12cm square= £2.67, 20cm × 20cm square= £6.95,

20cm × 30cm rectangular= £10.11, 7.5cm × 7.5cm square= £1.73

Curea P2

Super absorbent cellulose and polymer primary dressing (non-adherent)

Curea P2 dressing (Regen Medical) 10cm × 20cm rectangular= £4.53, 11cm × 11cm square= £2.49, 20cm × 20cm square= £7.88, 20cm × 30cm rectangular= £10.68

Cutisorb Ultra

Super absorbent cellulose and polymer primary dressing
Cutisorb Ultra dressing (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

DryMax Extra

Super absorbent cellulose and polymer primary dressing
DryMax Extra Soft Dressing (Espere Healthcare Ltd) 10cm × 10cm square= £0.88, 10cm × 20cm rectangular= £1.05, 20cm × 20cm square= £1.87, 20cm × 30cm rectangular= £2.36

Zetuvit Plus

Super absorbent cellulose primary dressing
Zetuvit Plus dressing (Paul Hartmann Ltd) 10cm × 10cm= £0.85, 10cm × 20cm= £1.17, 15cm × 20cm= £1.35, 20cm × 25cm= £1.84, 20cm × 40cm= £2.84

Super absorbent hydroconductive dressing

Drawtex

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton
Drawtex dressing (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

Advanced wound dressings

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

Hydrogel application (amorphous)

ActivHeal Hydrogel

Hydrogel containing guar gum and propylene glycol
ActivHeal Hydrogel (Advanced Medical Solutions Ltd) dressing= £1.41

Cutimed

Hydrogel
Cutimed (BSN medical Ltd) Gel dressing= £3.18

Flexigran

Hydrogel containing modified starch and glycerol
Flexigran (AI Pharmaceuticals) Gel dressing= £1.90

GranuGel

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol
GranuGel (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.45

Intrasite Gel

Hydrogel containing modified carmellose polymer and propylene glycol

IntraSite Gel (Smith & Nephew Healthcare Ltd) dressing= £3.78

Nu-Gel

Hydrogel containing alginate and propylene glycol
Nu-Gel (Systagenix Wound Management Ltd) dressing= £2.13

Purilon Gel

Hydrogel containing carboxymethylcellulose and calcium alginate

Purilon Gel (Coloplast Ltd) dressing= £2.39

Hydrogel sheet dressings

ActiFormCool

Hydrogel dressing
ActiFormCool sheet (L&R Medical UK Ltd) 10cm × 10cm square= £2.77, 10cm × 15cm rectangular= £3.98, 20cm × 20cm square= £8.34, 5cm × 6.5cm rectangular= £1.89

Aquafluo

Hydrogel dressing
Aquafluo (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

Coolie

Hydrogel dressing (without adhesive border)

Coolie (Zeroderma Ltd) sheet 7cm discs= £1.96

Gel FX

Hydrogel dressing (without adhesive border)
Gel FX sheet (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

Geliperm

Hydrogel sheets
Geliperm (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

Hydrosorb

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film
Hydrosorb sheet (Paul Hartmann Ltd) 10cm × 10cm square= £2.34, 20cm × 20cm square= £7.01, 5cm × 7.5cm rectangular= £1.64

Hydrosorb Comfort

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

Hydrosorb Comfort sheet (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.74, 4.5cm × 6.5cm rectangular= £1.94, 7.5cm × 10cm rectangular= £2.57

Intrasite Conformable

Soft non-woven dressing impregnated with Intrasite[®] gel
IntraSite Conformable dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.90, 10cm × 20cm rectangular= £2.56, 10cm × 40cm rectangular= £4.58

Novogel

Glycerol-based hydrogel sheets (standard or thin)
Novogel sheet (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £5.84

SanoSkin NET

Hydrogel sheet (without adhesive border)
SanoSkin (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28

Vacunet

Non-adherent, hydrogel coated polyester net dressing
Vacunet dressing (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

Sodium hyaluronate dressings

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

Hyiodine[®] should be used with caution in thyroid disorders.

Hyiodine

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

Vapour-permeable films and membranes

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

Non-woven fabric dressing with viscose-rayon pad

Niko Fix

For intravenous and subcutaneous catheter sites
Niko Fix (Unomedical Ltd) dressing 7cm × 8.5cm= £0.20

Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

Askina Derm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Askina Derm dressing (B.Braun Medical Ltd) 10cm × 12cm= £1.14, 10cm × 20cm= £2.17, 15cm × 20cm= £2.63, 20cm × 30cm= £4.70, 6cm × 7cm= £0.39

Dressfilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Dressfilm (St Georges Medical Ltd) dressing 15cm × 20cm= £1.90

Hydrofilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Hydrofilm dressing (Paul Hartmann Ltd) 10cm × 12.5cm= £0.44, 10cm × 15cm= £0.55, 10cm × 25cm= £0.85, 12cm × 25cm= £0.90, 15cm × 20cm= £1.01, 20cm × 30cm= £1.67, 6cm × 7cm= £0.24

Hypafix Transparent

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Hypafix Transparent (BSN medical Ltd) dressing 10cm × 2m= £9.03

Leukomed T

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Leukomed T dressing (BSN medical Ltd) 10cm × 12.5cm= £1.08, 11cm × 14cm= £1.31, 15cm × 20cm= £2.50, 15cm × 25cm= £2.67, 7.2cm × 5cm= £0.40, 8cm × 10cm= £0.74

Mepitel Film

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Mepitel Film dressing (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.36, 10.5cm × 25cm= £2.63, 15.5cm × 20cm= £3.34, 6.5cm × 7cm= £0.50

Mepore Film

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Mepore Film dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £1.27, 10cm × 25cm= £2.47, 15cm × 20cm= £3.14, 6cm × 7cm= £0.47

OpSite Flexifix

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
OpSite Flexifix dressing (Smith & Nephew Healthcare Ltd) 10cm × 1m= £6.94, 5cm × 1m= £4.12

OpSite Flexigridd

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
OpSite Flexigridd dressing (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.19, 15cm × 20cm= £3.00, 6cm × 7cm= £0.42

Polyskin II

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Kendall Film dressing (H & R Healthcare Ltd) 10cm × 12cm= £1.03, 10cm × 20cm= £2.04, 15cm × 20cm= £2.35, 20cm × 25cm= £4.11, 4cm × 4cm= £0.36, 5cm × 7cm= £0.40

ProtectFilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
ProtectFilm dressing (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

Suprasorb F

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Suprasorb F dressing (Lohmann & Rauscher) 10cm × 12cm= £0.83, 15cm × 20cm= £2.58, 5cm × 7cm= £0.34

Tegaderm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Tegaderm Film dressing (3M Health Care Ltd) 12cm × 12cm= £1.13, 15cm × 20cm= £2.44, 6cm × 7cm= £0.39

Tegaderm diamond

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Tegaderm Diamond dressing (3M Health Care Ltd) 10cm × 12cm= £1.23, 6cm × 7cm= £0.45

Vellafilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Vellafilm dressing (Advancis Medical) 12cm × 12cm= £1.14, 12cm × 35cm= £2.84, 15cm × 20cm= £2.17

Vapour-permeable Adhesive Film Dressing with absorbent pad

Adpore Ultra
 Film dressing with adsorbent pad
Adpore Ultra dressing (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

Vapour-permeable Adhesive Film Dressing with adsorbent pad

Alldress
 Film dressing with adsorbent pad
Alldress dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.99, 15cm × 15cm= £2.17, 15cm × 20cm= £2.68

Clearpore

Film dressing with adsorbent pad
Clearpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.20, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm=

£0.40, 10cm × 30cm= £0.65, 6cm × 10cm= £0.15, 6cm × 7cm= £0.12

Hydrofilm Plus

Film dressing with adsorbent pad

Hydrofilm Plus dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.48, 10cm × 25cm= £0.63, 10cm × 30cm= £0.72, 7.2cm × 5cm= £0.18, 9cm × 10cm= £0.28, 9cm × 15cm= £0.31

Leukomed T Plus

Film dressing with adsorbent pad

Leukomed T Plus dressing (BSN medical Ltd) 10cm × 20cm= £1.42, 10cm × 25cm= £1.59, 10cm × 30cm= £2.67, 10cm × 35cm= £3.23, 7.2cm × 5cm= £0.28, 8cm × 10cm= £0.57, 8cm × 15cm= £0.85

Mepore Film & Pad

Film dressing with adsorbent pad

Mepore Film & Pad dressing (Molnlycke Health Care Ltd) 4cm × 5cm= £0.25, 5cm × 7cm= £0.25, 9cm × 10cm= £0.64, 9cm × 15cm= £0.94, 9cm × 20cm= £1.41, 9cm × 25cm= £1.55, 9cm × 30cm= £2.08, 9cm × 35cm= £2.58

Mepore Ultra

Film dressing with adsorbent pad

Mepore Ultra dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.83, 11cm × 15cm= £1.22, 7cm × 8cm= £0.42, 9cm × 20cm= £1.56, 9cm × 25cm= £1.72, 9cm × 30cm= £2.84

OpSite Plus

Film dressing with adsorbent pad

OpSite Plus dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.26, 10cm × 20cm= £2.12, 10cm × 35cm= £3.52, 6.5cm × 5cm= £0.34, 8.5cm × 9.5cm= £0.93

OpSite Post-op

Film dressing with adsorbent pad

OpSite Post-Op dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.24, 10cm × 20cm= £2.08, 10cm × 25cm= £2.62, 10cm × 30cm= £3.10, 10cm × 35cm= £3.45, 8.5cm × 15.5cm= £1.26, 8.5cm × 9.5cm= £0.91

Pharmapore-PU

Film dressing with adsorbent pad

Pharmapore-PU dressing (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

PremierPore VP

Film dressing with adsorbent pad

PremierPore VP dressing (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

Tegaderm

Film dressing with adsorbent pad

Tegaderm + Pad dressing (3M Health Care Ltd) 5cm × 7cm= £0.26, 9cm × 10cm= £0.66, 9cm × 15cm= £0.97, 9cm × 20cm= £1.42, 9cm × 25cm= £1.60, 9cm × 35cm= £2.65

Tegaderm Absorbent Clear

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad

Tegaderm Absorbent Clear Acrylic dressing (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.18, 14.2cm × 15.8cm oval= £5.89, 14.9cm × 15.2cm rectangular= £8.83, 20cm × 20.3cm rectangular= £14.17, 7.6cm × 9.5cm oval= £3.23

Vapour-permeable transparent film dressing with adhesive foam border

Central Gard

For intravenous and subcutaneous catheter sites

Central Gard dressing (Unomedical Ltd) 16cm × 7cm= £1.00, 16cm × 8.8cm= £1.10

Easi-V

For intravenous and subcutaneous catheter sites

Easi-V (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

Vapour-permeable transparent, adhesive film dressing

Hydrofilm I.V. Control

For intravenous and subcutaneous catheter sites

Hydrofilm (Paul Hartmann Ltd) I.V. Control dressing 7cm × 9cm= £0.32

Vapour-permeable, transparent, adhesive film dressing

IV3000

For intravenous and subcutaneous catheter sites

IV3000 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.47, 5cm × 6cm= £0.44, 6cm × 7cm= £0.59, 7cm × 9cm= £0.77, 9cm × 12cm= £1.53

Mepore IV

For intravenous and subcutaneous catheter sites

Mepore IV dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £1.11, 5cm × 5.5cm= £0.32, 8cm × 9cm= £0.41

Pharmapore-PU IV

For intravenous and subcutaneous catheter sites

Pharmapore-PU-IV dressing (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

Tegaderm IV

For intravenous and subcutaneous catheter sites

Tegaderm IV Advanced dressing with securing tapes (3M Health Care Ltd) 10cm × 15.5cm= £1.68, 7cm × 8.5cm= £0.60

Soft polymer dressings

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

Cellulose dressings

Sorbion Sachet Border

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border

Cutimed Sorbion Sachet Border dressing (BSN medical Ltd) 10cm × 10cm square= £3.10, 15cm × 15cm square= £4.73, 25cm × 15cm rectangular= £7.36

Sorbion Sachet EXTRA

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

Cutimed Sorbion Sachet Extra dressing (BSN medical Ltd) 10cm × 10cm= £2.37, 20cm × 10cm= £3.93, 20cm × 20cm= £7.37, 30cm × 20cm= £10.51, 5cm × 5cm= £1.53, 7.5cm × 7.5cm= £1.87

Sorbion Sachet Multi Star

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

Cutimed Sorbion Sachet Multi Star dressing (BSN medical Ltd) 14cm × 14cm= £5.15, 8cm × 8cm= £3.15

Sorbion Sachet S Drainage

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('v' shaped dressing)

Cutimed (BSN medical Ltd) Sorbion Sachet S drainage dressing 10cm × 10cm= £2.78

Suprasorb X

Biosynthetic cellulose fibre dressing

Suprasorb X dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £8.89, 2cm × 21cm rope= £6.91, 5cm × 5cm square= £2.16, 9cm × 9cm square= £4.49

With absorbent pad

Advazorb Border

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

Advazorb Border dressing (Advancis Medical) 10cm × 10cm= £2.17, 10cm × 20cm= £3.00, 10cm × 30cm= £4.39, 12.5cm × 12.5cm= £2.67, 15cm × 15cm= £3.26, 20cm × 20cm= £5.64, 7.5cm × 7.5cm= £1.23

Advazorb Border Lite

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

Advazorb Border Lite dressing (Advancis Medical) 10cm × 10cm = £1.95, 10cm × 20cm = £2.70, 10cm × 30cm = £3.96, 12.5cm × 12.5cm = £2.40, 15cm × 15cm = £2.94, 20cm × 20cm = £5.08, 7.5cm × 7.5cm = £1.11

Advazorb Silfix

Soft silicone wound contact dressing with polyurethane foam film backing

Advazorb Silfix Lite dressing (Advancis Medical) 10cm × 10cm = £1.91, 10cm × 20cm = £3.29, 12.5cm × 12.5cm = £2.68, 15cm × 15cm = £3.47, 20cm × 20cm = £5.15, 7.5cm × 7.5cm = £1.02

Advazorb Silfix Lite

Soft silicone wound contact dressing with polyurethane foam film backing

Advazorb Silfix Lite dressing (Advancis Medical) 10cm × 10cm = £1.73, 10cm × 20cm = £2.96, 12.5cm × 12.5cm = £2.41, 15cm × 15cm = £3.12, 20cm × 20cm = £4.63, 7.5cm × 7.5cm = £0.92

Allewyn Gentle Border

Silicone gel wound contact dressing, with polyurethane foam film backing

Allewyn Gentle Border (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm = £10.14, dressing 10cm × 10cm = £2.30, 12.5cm × 12.5cm = £2.82, 17.5cm × 17.5cm = £5.56, 7.5cm × 7.5cm = £1.57

Allewyn Gentle Border Lite

Silicone gel wound contact dressing, with polyurethane foam film backing

Allewyn Gentle Border Lite dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm = £2.27, 15cm × 15cm = £4.01, 5.5cm × 12cm = £1.94, 5cm × 5cm = £0.94, 8cm × 15cm = £3.61

Allewyn Life

Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border

Allewyn Life dressing (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm = £1.78, 12.9cm × 12.9cm = £2.61, 15.4cm × 15.4cm = £3.19, 21cm × 21cm = £6.29

Cutimed Siltec

Soft silicone wound contact dressing, with polyurethane foam film backing

Cutimed Siltec (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm = £4.69, 23cm × 23cm = £6.41, dressing 10cm × 10cm = £2.33, 10cm × 20cm = £3.85, 15cm × 15cm = £4.36, 20cm × 20cm = £6.61, 5cm × 6cm = £1.25

Cutimed Siltec B

Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds

Cutimed Siltec B dressing (BSN medical Ltd) 12.5cm × 12.5cm = £2.38, 15cm × 15cm = £3.16, 17.5cm × 17.5cm = £5.11, 22.5cm × 22.5cm = £6.24, 7.5cm × 7.5cm = £1.39

Cutimed Siltec L

Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds

Cutimed Siltec L dressing (BSN medical Ltd) 10cm × 10cm = £1.62, 15cm × 15cm = £3.56, 5cm × 6cm = £1.10

Eclipse Adherent

Soft silicone wound contact layer with absorbent pad and film backing

Eclipse Adherent dressing (Advancis Medical) 10cm × 10cm = £3.09, 10cm × 20cm = £3.88, 15cm × 15cm = £5.16, 20cm × 30cm = £10.33, 17cm × 19cm sacral = £3.89, 22cm × 23cm sacral = £6.44

Flivasorb Adhesive

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

Flivasorb Adhesive dressing (Lohmann & Rauscher) 12cm × 12cm square = £3.48, 15cm × 18cm square = £4.70

Mepilex

Absorbent soft silicone dressing with polyurethane foam film backing

Mepilex (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm = £5.63, 15cm × 22cm = £6.44, XT dressing 10cm × 11cm = £2.75,

11cm × 20cm = £4.54, 15cm × 16cm = £4.98, 20cm × 21cm = £7.52, dressing 5cm × 5cm = £1.25

Mepilex Border

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

Mepilex Border (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm = £6.79, Sacrum dressing 18cm × 18cm = £4.97, 23cm × 23cm = £8.11, dressing 10cm × 12.5cm = £2.76, 10cm × 20cm = £3.77, 10cm × 30cm = £5.66, 15cm × 17.5cm = £4.24, 17cm × 20cm = £6.16

Mepilex Border Lite

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

Mepilex Border Lite dressing (Molnlycke Health Care Ltd) 15cm × 15cm = £3.99, 4cm × 5cm = £0.94, 5cm × 12.5cm = £2.04, 7.5cm × 7.5cm = £1.37

Mepilex Lite

Thin absorbent soft silicone dressing with polyurethane foam film backing

Mepilex Lite dressing (Molnlycke Health Care Ltd) 10cm × 10cm = £2.23, 15cm × 15cm = £4.33, 20cm × 50cm = £27.32, 6cm × 8.5cm = £1.87

Mepilex Transfer

Soft silicone exudate transfer dressing

Mepilex Transfer dressing (Molnlycke Health Care Ltd) 10cm × 12cm = £3.63, 15cm × 20cm = £10.98, 20cm × 50cm = £28.07, 7.5cm × 8.5cm = £2.30

Sorbion Sana

Non-adherent polyethylene wound contact dressing with absorbent core

Cutimed Sorbion Sana Gentle dressing (BSN medical Ltd) 12cm × 12cm = £2.62, 12cm × 22cm = £4.73, 22cm × 22cm = £8.41, 8.5cm × 8.5cm = £2.09

UrgotulDuo

Non-adherent soft polymer wound contact dressing with absorbent pad

UrgotulDuo dressing (Urigo Ltd) 10cm × 12cm = £3.98, 15cm × 20cm = £9.25, 5cm × 10cm = £2.58

Without absorbent pad

Adaptic Touch

Non-adherent soft silicone wound contact dressing

Adaptic Touch dressing (Systagenix Wound Management Ltd) 12.7cm × 15cm = £4.65, 20cm × 32cm = £12.50, 5cm × 7.6cm = £1.13, 7.6cm × 11cm = £2.25

Askina SilNet

Soft silicone-coated wound contact dressing

Askina SilNet dressing (B.Braun Medical Ltd) 10cm × 18cm = £5.24, 20cm × 30cm = £12.84, 5cm × 7.5cm = £1.19, 7.5cm × 10cm = £2.40

Mepitel

Soft silicone, semi-transparent wound contact dressing

Mepitel dressing (Molnlycke Health Care Ltd) 12cm × 15cm = £5.65, 5cm × 7cm = £1.41, 8cm × 10cm = £2.82

Mepitel One

Soft silicone, thin, transparent wound contact dressing

Mepitel One dressing (Molnlycke Health Care Ltd) 13cm × 15cm = £4.98, 24cm × 27.5cm = £14.25, 6cm × 7cm = £1.22, 9cm × 10cm = £2.41

Physiotulle

Non-adherent soft polymer wound contact dressing

Physiotulle dressing (Coloplast Ltd) 10cm × 10cm = £2.38, 15cm × 20cm = £7.25

Sifix

Soft silicone-coated polyester wound contact dressing

Sifix dressing (Advancis Medical) 12cm × 15cm = £4.74, 20cm × 30cm = £12.19, 35cm × 60cm = £40.88, 5cm × 7cm = £1.15, 8cm × 10cm = £2.35

Silon-TR

Soft silicone polymer wound contact dressing

Silon-TR dressing (Bio Med Sciences) 13cm × 13cm = £3.52, 13cm × 25cm = £5.47, 28cm × 30cm = £7.37

Sorbion Contact

Non-adherent soft polymer wound contact dressing
Cutimed Sorbion Contact dressing (BSN medical Ltd) 10cm × 10cm = £2.07, 10cm × 20cm = £4.14, 20cm × 20cm = £7.26, 20cm × 30cm = £10.37, 7.5cm × 7.5cm = £1.55

Tegaderm Contact

Non-adherent soft polymer wound contact dressing
Tegaderm Contact dressing (3M Health Care Ltd) 20cm × 25cm = £11.06, 7.5cm × 10cm = £2.32

Urgotul

Non-adherent soft polymer wound contact dressing
Urgotul dressing (Urgo Ltd) 10cm × 10cm = £3.13, 10cm × 40cm = £10.53, 15cm × 15cm = £6.66, 15cm × 20cm = £8.86, 20cm × 30cm = £14.25, 5cm × 5cm = £1.57

Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

*Hydrocolloid-fibrous dressings***Aquacel**

Soft non-woven pad containing hydrocolloid-fibres
Aquacel Ribbon dressing (ConvaTec Ltd) 1cm × 45cm = £1.94, 2cm × 45cm = £2.58

Aquacel Foam

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border
Aquacel Foam dressing (adhesive) (ConvaTec Ltd) 10cm × 10cm = £2.25, 12.5cm × 12.5cm = £2.79, 17.5cm × 17.5cm = £5.58, 19.8cm × 14cm heel = £5.71, 20cm × 16.9cm sacral = £5.12, 21cm × 21cm = £8.17, 25cm × 30cm = £10.58, 8cm × 8cm = £1.47, (non-adhesive) 10cm × 10cm = £2.66, 15cm × 15cm = £4.48, 15cm × 20cm = £6.12, 20cm × 20cm = £7.30

UrgoClean Pad

Pad, hydrocolloid fibres coated with soft-adherent lipocolloidal wound contact layer
UrgoClean Pad dressing (Urgo Ltd) 10cm × 10cm square = £2.21, 20cm × 15cm rectangular = £4.16, 6cm × 6cm square = £0.99

UrgoClean Rope

Rope, non-woven rope containing hydrocolloid fibres
UrgoClean rope dressing (Urgo Ltd) 2.5cm × 40cm = £2.49, 5cm × 40cm = £3.29

*Polyurethane matrix dressing***Cutinova Hydro**

Polyurethane matrix with absorbent particles and waterproof polyurethane film
Cutinova Hydro dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square = £2.68, 15cm × 20cm rectangular = £5.66, 5cm × 6cm rectangular = £1.33

*With adhesive border***Biatain Super**

Semi-permeable hydrocolloid dressing; without adhesive border
Biatain Super dressing (adhesive) (Coloplast Ltd) 10cm × 10cm square = £2.26, 12.5cm × 12.5cm square = £3.73, 12cm × 20cm rectangular = £3.74, 15cm × 15cm square = £4.50, 20cm × 20cm square = £7.02

Granuflex Bordered

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film
Granuflex Bordered dressing (ConvaTec Ltd) 10cm × 10cm square = £3.51, 10cm × 13cm triangular = £4.14, 15cm × 15cm square = £6.69, 15cm × 18cm triangular = £6.45, 6cm × 6cm square = £1.85

Hydrocoll Border

Hydrocolloid dressing with adhesive border and absorbent wound contact pad
Hydrocoll Border (bevelled edge) dressing (Paul Hartmann Ltd) 10cm × 10cm square = £2.52, 12cm × 18cm sacral = £3.77, 15cm × 15cm square = £4.73, 5cm × 5cm square = £1.05, 7.5cm × 7.5cm square = £1.73, 8cm × 12cm concave = £2.22

Tegaderm Hydrocolloid

Hydrocolloid dressing with adhesive border; normal or thin
Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 12cm oval = £1.58, 13cm × 15cm oval = £2.95, dressing 10cm × 12cm oval = £2.37, 13cm × 15cm oval = £4.42, 17.1cm × 16.1cm sacral = £4.94

*Without adhesive border***ActivHeal Hydrocolloid**

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

ActivHeal Hydrocolloid (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square = £1.58, 15cm × 15cm square = £3.43, 15cm × 18cm sacral = £3.98, 5cm × 7.5cm rectangular = £0.78, foam backed dressing 10cm × 10cm square = £1.55, 15cm × 15cm square = £2.91, 15cm × 18cm sacral = £3.36, 5cm × 7.5cm rectangular = £0.97

Biatain Super

Semi-permeable, hydrocolloid film dressing without adhesive border
Biatain Super dressing (non-adhesive) (Coloplast Ltd) 10cm × 10cm square = £2.26, 12.5cm × 12.5cm square = £3.73, 12cm × 20cm rectangular = £3.74, 15cm × 15cm square = £4.50, 20cm × 20cm square = £7.02

Comfeel Plus Contour

Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus Contour dressing (Coloplast Ltd) 6cm × 8cm = £2.32, 9cm × 11cm = £4.03

Comfeel Plus Pressure Relieving

Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus Pressure Relief dressing (Coloplast Ltd) 10cm diameter circular = £4.86, 15cm diameter circular = £7.31, 7cm diameter circular = £3.63

Comfeel Plus Transparent

Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus Transparent dressing (Coloplast Ltd) 10cm × 10cm square = £1.34, 15cm × 15cm square = £3.49, 15cm × 20cm rectangular = £3.54, 20cm × 20cm square = £3.57, 5cm × 15cm rectangular = £1.66, 5cm × 25cm rectangular = £2.70, 5cm × 7cm rectangular = £0.70, 9cm × 14cm rectangular = £2.55, 9cm × 25cm rectangular = £3.62

Comfeel Plus Ulcer

Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus dressing (Coloplast Ltd) 10cm × 10cm square = £2.56, 20cm × 20cm square = £7.91, 4cm × 6cm rectangular = £1.01

DuoDERM Extra Thin

Semi-permeable hydrocolloid dressing
DuoDERM Extra Thin dressing (ConvaTec Ltd) 10cm × 10cm square = £1.39, 15cm × 15cm square = £3.00, 5cm × 10cm rectangular = £0.80, 7.5cm × 7.5cm square = £0.84, 9cm × 15cm rectangular = £1.86, 9cm × 25cm rectangular = £2.97, 9cm × 35cm rectangular = £4.15

DuoDERM Signal

Semi-permeable hydrocolloid dressing with 'Time to change' indicator
DuoDERM Signal dressing (ConvaTec Ltd) 10cm × 10cm square = £2.23, 11cm × 19cm oval = £3.42, 14cm × 14cm square = £3.91, 18.5cm × 19.5cm heel = £5.46, 20cm × 20cm square = £7.77, 22.5cm × 20cm sacral = £6.38

Flexigran

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

Flexigran (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

Graunflex

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

Graunflex (modified) dressing (ConvaTec Ltd) 10cm × 10cm square= £2.94, 15cm × 15cm square= £5.58, 15cm × 20cm rectangular= £6.05, 20cm × 20cm square= £8.40

Hydrocoll Basic

Hydrocolloid dressing with absorbent wound contact pad

Hydrocoll Basic (Paul Hartmann Ltd) dressing 10cm × 10cm square= £2.56

Hydrocoll Thin Film

Thin hydrocolloid dressing with absorbent wound contact pad

Hydrocoll Thin Film dressing (Paul Hartmann Ltd) 10cm × 10cm square= £1.20, 15cm × 15cm square= £2.71, 7.5cm × 7.5cm square= £0.73

Nu-Derm

Semi-permeable hydrocolloid dressing (normal and thin)

Nu-Derm dressing (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.57, 15cm × 15cm square= £3.21, 15cm × 18cm sacral= £4.49, 20cm × 20cm square= £6.41, 5cm × 5cm square= £0.86, 8cm × 12cm heel/elbow= £3.21, thin 10cm × 10cm square= £1.07

Tegaderm Hydrocolloid

Hydrocolloid dressing without adhesive border; normal and thin

Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.58, dressing 10cm × 10cm square= £2.41

Foam dressings

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

Polyurethane Foam Dressing**Cutimed Cavity**

Cutimed Cavity dressing (BSN medical Ltd) 10cm × 10cm= £3.28, 15cm × 15cm= £4.93, 5cm × 6cm= £1.97

Alginate dressings

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used

if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

ActivHeal Alginate

Calcium sodium alginate dressing

ActivHeal Alginate dressing (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

Calcium alginate dressing

Kendall (H & R Healthcare Ltd) Foam Plus dressing 10cm × 10cm square= £1.48

Melgisorb

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

Melgisorb (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

Sorbalgon

Calcium alginate dressing

Sorbalgon (Paul Hartmann Ltd) T dressing 2g= £3.63, dressing 10cm × 10cm= £1.78, 5cm × 5cm= £0.85

Sorbsan Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads

Sorbsan Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £1.72, 10cm × 20cm= £3.22, 5cm × 5cm= £0.82

Sorbsan Plus

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £3.12, 10cm × 20cm= £3.98, 15cm × 20cm= £5.53, 7.5cm × 10cm= £1.77

Sorbsan Ribbon

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan (Aspen Medical Europe Ltd) Ribbon dressing 40cm= £2.06

Sorbsan Surgical Packing

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan (Aspen Medical Europe Ltd) Packing dressing 2g= £3.50

Suprasorb A

Calcium alginate dressing

Suprasorb A (Lohmann & Rauscher) alginate dressing 10cm × 10cm= £1.29, 5cm × 5cm= £0.66, cavity dressing 2g= £2.40

Tegaderm Alginate

Calcium alginate dressing

Tegaderm Alginate dressing (3M Health Care Ltd) 10cm × 10cm= £1.75, 2cm × 30.4cm= £2.92, 5cm × 5cm= £0.83

Urgosorb

Alginate and carboxymethylcellulose dressing without adhesive border

Urgosorb (Urgo Ltd) Pad dressing 10cm × 10cm= £2.22, 10cm × 20cm= £4.07, 5cm × 5cm= £0.92, Rope dressing 30cm= £2.91

Capillary-acting dressings

Vacutex

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

Vacutex dressing (Haddenham Healthcare Ltd) 10cm × 10cm= £1.70, 10cm × 15cm= £2.29, 10cm × 20cm= £2.75, 5cm × 5cm= £0.96

Odour absorbent dressings

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

Askina Carbosorb

Activated charcoal and non-woven viscose rayon dressing

Askina Carbosorb dressing (B.Braun Medical Ltd) 10cm × 10cm= £3.04, 10cm × 20cm= £5.87

CarboFLEX

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

CarboFlex dressing (ConvaTec Ltd) 10cm × 10cm= £3.38, 15cm × 20cm= £7.68, 8cm × 15cm oval= £4.05

Carbopad VC

Activated charcoal non-absorbent dressing

Carbopad VC dressing (Synergy Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

CliniSorb Odour Control Dressings

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

CliniSorb dressing (CliniMed Ltd) 10cm × 10cm= £1.99, 10cm × 20cm= £2.64, 15cm × 25cm= £4.26

Antimicrobial dressings

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine

can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

Honey dressings

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.

For *Actilite*[®], *Activon Tulle*[®] and *Revamil*[®], where no size is stated by the prescriber the 5 cm size is to be supplied. *Medihoney*[®] *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

Honey-based topical application

Activon Honey

Medical grade manuka honey

Activon (Advancis Medical) Medical Grade Manuka Honey dressing= £2.77

L-Mesitran SOFT ointment dressing

Honey (medical grade) 40%

L-Mesitran (H & R Healthcare Ltd) SOFT ointment dressing= £3.62

MANUKApli Honey

Medical grade manuka honey

MANUKApli (Manuka Medical Ltd) dressing= £5.90

Medihoney Antibacterial Medical Honey

Medical grade, *Leptospermum* sp.

Medihoney (Integra NeuroSciences Ltd) Antibacterial Medical Honey dressing= £4.03

Medihoney Antibacterial Wound Gel

Medical grade, *Leptospermum* sp. 80% in natural waxes and oils

Medihoney (Integra NeuroSciences Ltd) Antibacterial Wound Gel dressing= £4.09

Melladerm Plus Honey

Medical grade; Bulgarian (mountain flower) 45% in basis containing polyethylene glycol

Melladerm (SanoMed Manufacturing BV) Plus dressing= £8.50

Revamil Balm

Medical grade honey-based ointment

Revamil (Oswell Penda Pharmaceutical Ltd) Balm dressing= £9.99

Revamil Wound Gel

Medical grade honey

Revamil (Oswell Penda Pharmaceutical Ltd) Wound Gel dressing= £3.48

Sheet dressing

Actilite

Knitted viscose impregnated with medical grade manuka honey and manuka oil

Actilite gauze dressing (Advancis Medical) 10cm × 10cm= £1.23, 10cm × 20cm= £2.38, 5cm × 5cm= £0.71

Activon Tulle

Knitted viscose impregnated with medical grade manuka honey

Activon Tulle gauze dressing (Advancis Medical) 10cm × 10cm= £3.71, 5cm × 5cm= £2.25

Algivon

Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey

Algivon dressing (Advancis Medical) 10cm × 10cm= £4.25, 5cm × 5cm= £2.48

Algivon Plus

Reinforced calcium alginate dressing impregnated with medical grade manuka honey

Algivon Plus (Advancis Medical) Ribbon dressing 2.5cm × 20cm= £4.20, dressing 10cm × 10cm= £4.20, 5cm × 5cm= £2.45

L-Mesitran Border

Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border

L-Mesitran (H & R Healthcare Ltd) Border sheet 10cm × 10cm square= £2.76

L-Mesitran Hydro

Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border

L-Mesitran (H & R Healthcare Ltd) Hydro sheet 10cm × 10cm square= £2.65

L-Mesitran Net

Hydrogel, non-adherent wound contact layer, without adhesive border

L-Mesitran (H & R Healthcare Ltd) Net sheet 10cm × 10cm square= £2.55

Medihoney Antibacterial Honey Apinate

Non-adherent calcium alginate dressing, impregnated with medical grade honey

Medihoney Antibacterial Honey Apinate (Integra NeuroSciences Ltd) dressing 10cm × 10cm square= £3.46, 5cm × 5cm square= £2.04, rope dressing 1.9cm × 30cm= £4.28

Medihoney Antibacterial Honey Tulle

Woven fabric impregnated with medical grade manuka honey

Medihoney (Integra NeuroSciences Ltd) Tulle dressing 10cm x10cm= £3.03

Medihoney Gel sheet

Sodium alginate dressing impregnated with medical grade honey

Medihoney Gel Sheet dressing (Integra NeuroSciences Ltd) 10cm × 10cm= £4.28, 5cm × 5cm= £1.78

Melladerm Plus Tulle

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

Melladerm Plus Tulle (SanoMed Manufacturing BV) dressing 10cm × 10cm= £2.10

Revamil

Polyacetate dressing impregnated with medical grade honey
Revamil dressing (Oswell Penda Pharmaceutical Ltd) 10cm × 10cm= £2.90, 10cm × 20cm= £5.30, 5cm × 5cm= £1.75, 8cm × 8cm= £3.33

Iodine dressings

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

Iodoflex[®] and **Iodosorb**[®] are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with

caution in patients with severe renal impairment or history of thyroid disorder.

Iodozyme[®] is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Oxyzyme[®] is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Povidone-iodine Fabric Dressing is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

Iodoflex Paste

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

Iodoflex paste (Smith & Nephew Healthcare Ltd) dressing= £8.54

Iodosorb Ointment

Iodine 0.9% as cadexomer–iodine in an ointment basis

Iodosorb ointment (Smith & Nephew Healthcare Ltd) dressing= £9.44

Iodosorb Powder

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet
Iodosorb powder (Smith & Nephew Healthcare Ltd) dressing sachets= £2.02

Povidone-iodine fabric dressing

Inadine

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10%
Inadine dressing (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

Silver dressings

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

Alginate dressings

Algisite Ag

Calcium alginate dressing, with silver

Algisite Ag dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.37, 10cm × 20cm= £8.05, 2g= £6.04, 5cm × 5cm= £1.75

Askina Calgitrol Ag

Calcium alginate and silver alginate dressing with polyurethane foam backing

Askina Calgitrol Ag dressing (B.Braun Medical Ltd) 10cm × 10cm square= £3.37, 15cm × 15cm square= £6.53, 20cm × 20cm square= £15.22

Askina Calgitrol Thin

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

Askina Calgitrol Thin dressing (B.Braun Medical Ltd) 10cm × 10cm square= £4.30, 20cm × 20cm square= £17.03, 5cm × 5cm square= £2.07

Melgisorb Ag

Alginate and carboxymethylcellulose dressing, with ionic silver

Melgisorb Ag (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.72, dressing 10cm × 10cm= £3.79, 15cm × 15cm= £8.02, 5cm × 5cm= £1.89

Silvercel

Alginate and carboxymethylcellulose dressing impregnated with silver

Silvercel dressing (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.82, 11cm × 11cm square= £4.21, 2.5cm × 30.5cm rectangular= £4.54, 5cm × 5cm square= £1.71

Silvercel Non-adherent

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

Silvercel Non-Adherent (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.98, dressing 10cm × 20cm rectangular= £7.33, 11cm × 11cm square= £3.93, 5cm × 5cm square= £1.64

Sorbsan Silver Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

Sorbsan Silver Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

Sorbsan Silver Plus

Calcium alginate dressing with absorbent backing, with silver

Sorbsan Silver Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

Sorbsan Silver Ribbon

With silver

Sorbsan Silver Ribbon (Aspen Medical Europe Ltd) dressing 1g= £4.18

Sorbsan Silver Surgical Packing

With silver

Sorbsan Silver Packing (Aspen Medical Europe Ltd) dressing 2g= £5.80

Suprasorb A + Ag

Calcium alginate dressing, with silver

Suprasorb A + Ag (Lohmann & Rauscher) dressing 10cm × 10cm= £4.32, 10cm × 20cm= £7.97, 5cm × 5cm= £1.72, rope dressing 2g= £6.38

Tegaderm Alginate Ag

Calcium alginate and carboxymethylcellulose dressing, with silver

Tegaderm Alginate Ag dressing (3M Health Care Ltd) 10cm × 10cm= £3.30, 3cm × 30cm= £3.77, 5cm × 5cm= £1.42

Urgosorb Silver

Alginate and carboxymethylcellulose dressing, impregnated with silver

Urgosorb Silver (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.86, dressing 10cm × 10cm= £3.84, 10cm × 20cm= £7.24, 5cm × 5cm= £1.61

Foam dressings

Acticoat Moisture Control

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

Acticoat Moisture Control dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.66, 10cm × 20cm rectangular= £34.41, 5cm × 5cm square= £7.55

Allevyn Ag

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

Allevyn Ag (Smith & Nephew Healthcare Ltd) Adhesive dressing 10cm × 10cm square= £5.79, 12.5cm × 12.5cm square= £7.60, 17.5cm × 17.5cm square= £14.63, 17cm × 17cm sacral= £11.42, 22cm × 22cm sacral= £15.30, 7.5cm × 7.5cm square= £3.67, Heel Non-Adhesive dressing 10.5cm × 13.5cm= £11.32, Non-Adhesive

dressing 10cm × 10cm square= £6.46, 15cm × 15cm square= £12.25, 20cm × 20cm square= £17.94, 5cm × 5cm square= £3.43

Biatain Ag

Silver impregnated polyurethane foam film dressing, with or without adhesive border

Biatain Ag (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.23, dressing 10cm × 10cm square= £8.50, 10cm × 20cm rectangular= £15.61, 12.5cm × 12.5cm square= £9.72, 15cm × 15cm square= £17.05, 18cm × 18cm square= £19.50, 19cm × 20cm heel= £19.23, 20cm × 20cm square= £24.05, 23cm × 23cm sacral= £20.44, 5cm × 7cm rectangular= £3.49

PolyMem Silver

Silver impregnated polyurethane foam film dressing, with or without adhesive border

PolyMem Silver (H & R Healthcare Ltd) WIC dressing 8cm × 8cm= £7.10, dressing 10.8cm × 10.8cm square= £8.93, 12.7cm × 8.8cm oval= £5.64, 17cm × 19cm rectangular= £17.89, 5cm × 7.6cm oval= £2.29

Hydrocolloid dressings

Aquacel Ag

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)

Aquacel Ag (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.24, 2cm × 45cm= £4.96, dressing 10cm × 10cm square= £4.93, 15cm × 15cm square= £9.28, 20cm × 30cm rectangular= £23.03, 4cm × 10cm rectangular= £3.00, 4cm × 20cm rectangular= £3.91, 4cm × 30cm rectangular= £5.86

Physiottulle Ag

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

Physiottulle (Coloplast Ltd) dressing 10cm × 10cm= £2.38

Low adherence dressing

Acticoat

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.01, 10cm × 20cm rectangular= £14.09, 20cm × 40cm rectangular= £48.21, 5cm × 5cm square= £3.69

Acticoat 7

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

Acticoat 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.10, 15cm × 15cm square= £34.34, 5cm × 5cm square= £6.41

Acticoat Flex 3

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat Flex 3 dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.11, 10cm × 20cm rectangular= £14.24, 20cm × 40cm rectangular= £48.74, 5cm × 5cm square= £3.73

Acticoat Flex 7

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

Acticoat Flex 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.31, 15cm × 15cm square= £34.73, 5cm × 5cm square= £6.48

Atrauman Ag

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

Atrauman Ag dressing (Paul Hartmann Ltd) 10cm × 10cm= £1.31, 10cm × 20cm= £2.56, 5cm × 5cm= £0.54

Soft polymer dressings

Allevyn Ag Gentle

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

Allevyn Ag Gentle (Smith & Nephew Healthcare Ltd) Border dressing
10cm × 10cm= £6.69, 12.5cm × 12.5cm= £8.61, 17.5cm × 17.5cm= £16.40, 7.5cm × 7.5cm= £4.45, dressing 10cm × 10cm= £6.50, 10cm × 20cm= £10.74, 15cm × 15cm= £12.09, 20cm × 20cm= £17.91, 5cm × 5cm= £3.49

Mepilex Ag

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

Mepilex Ag (Molnlycke Health Care Ltd) dressing 10cm × 10cm= £6.37, 10cm × 20cm= £10.50, 15cm × 15cm= £11.82, 20cm × 20cm= £17.51, 20cm × 50cm= £65.72, Border Ag dressing 10cm × 12.5cm= £6.41, 10cm × 20cm= £9.33, 10cm × 30cm= £14.00, 15cm × 17.5cm= £11.76, 17cm × 20cm= £15.24, 7cm × 7.5cm= £3.54, Border Sacrum Ag dressing 18cm × 18cm= £12.30, 20cm × 20cm= £14.95, 23cm × 23cm= £19.64, Heel Ag dressing 13cm × 20cm= £13.29, 15cm × 22cm= £14.89

Urgotul Silver

Non-adherent soft polymer wound contact dressing, with silver

Urgotul Silver dressing (Urigo Ltd) 10cm × 12cm= £3.24, 15cm × 20cm= £9.18

With charcoal

Actisorb Silver 220

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve
Actisorb Silver 220 dressing (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.63, 10.5cm × 19cm= £4.78, 6.5cm × 9.5cm= £1.68

Other antimicrobials

Cutimed Siltec Sorbact

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

Cutimed Siltec Sorbact dressing (BSN medical Ltd) 12.5cm × 12.5cm= £6.78, 15cm × 15cm= £8.40, 17.5cm × 17.5cm= £11.75, 22.5cm × 22.5cm= £17.88, 7.5cm × 7.5cm= £2.65, 17.5cm × 17.5cm sacral= £8.50, 23cm × 23cm sacral= £12.77

Cutimed Sorbact

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

Cutimed Sorbact (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.24, 5cm × 20cm= £8.36, Round swab 3cm= £3.47, dressing pad 10cm × 10cm= £5.79, 10cm × 20cm= £9.03, 7cm × 9cm= £3.70, swab 4cm × 6cm= £1.74, 7cm × 9cm= £2.89

Cutimed Sorbact Gel

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

Cutimed Sorbact Gel dressing (BSN medical Ltd) 7.5cm × 15cm rectangular= £4.71, 7.5cm × 7.5cm square= £2.79

Cutimed Sorbact Hydroactive

Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

Cutimed Sorbact Hydroactive dressing (BSN medical Ltd) 14cm × 14cm= £5.65, 14cm × 24cm= £9.05, 19cm × 19cm= £10.63, 24cm × 24cm= £16.12, 7cm × 8.5cm= £3.87

Cutimed Sorbact Hydroactive B

Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border
Cutimed Sorbact Hydroactive B dressing (BSN medical Ltd) 10cm × 10cm= £7.46, 10cm × 20cm= £11.94, 15cm × 15cm= £14.04, 5cm × 6.5cm= £4.18

Flaminal Forte gel

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

Flaminal (Flen Health UK Ltd) Forte gel dressing= £8.06

Flaminal Hydro gel

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

Flaminal (Flen Health UK Ltd) Hydro gel dressing= £8.06

Kendall AMD

Foam dressing with polyhexanide, without adhesive border

Kendall AMD Antimicrobial foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £4.76, 10cm × 20cm rectangular= £9.02, 15cm × 15cm square= £9.02, 20cm × 20cm square= £13.21, 5cm × 5cm square= £2.53, 8.8cm × 7.5cm rectangular (fenestrated)= £4.28

Kendall AMD Plus

Foam dressing with polyhexanide, without adhesive border

Kendall AMD Antimicrobial Plus foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £5.00, 8.8cm × 7.5cm rectangular (fenestrated)= £4.48

Octenilin Wound gel

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

Octenilin Wound Gel (Schulke & Mayr UK Ltd) dressing= £4.78

Prontosan Wound Gel

Hydrogel containing betaine surfactant and polyhexanide

Prontosan Wound Gel (B.Braun Medical Ltd) gel dressing= £6.71

Suprasorb X + PHMB

Biosynthetic cellulose fibre dressing with polyhexanide

Suprasorb X + PHMB dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £12.22, 2cm × 21cm rope= £7.61, 5cm × 5cm square= £2.70, 9cm × 9cm square= £5.37

Telfa AMD

Low adherence absorbent perforated plastic film faced dressing with polyhexanide

Telfa AMD dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

Telfa AMD Island

Low adherence dressing with adhesive border and absorbent pad, with polyhexanide

Telfa AMD Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

Chlorhexidine gauze dressing

Bactigras

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

Bactigras gauze dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm, 5cm × 5cm

Irrigation fluids

Octenilin Wound Irrigation solution

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

Octenilin (Schulke & Mayr UK Ltd) Irrigation solution 350ml bottles= £4.60

Prontosan Wound Irrigation Solution

Aqueous solution containing betaine surfactant and polyhexanide

Prontosan irrigation solution (B.Braun Medical Ltd) 350ml bottles= £5.03, 40ml unit dose= £14.93

Specialised dressings

Protease-modulating matrix dressings

Cadesorb Ointment

Cadesorb (Smith & Nephew Healthcare Ltd) ointment= £9.71

Catrix

Catrix dressing (Crantage Healthcare Ltd) sachets= £3.80

Promogran

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

Promogran dressing (Systagenix Wound Management Ltd) 123 square cm= £15.92, 28 square cm= £5.29

Promogran Prisma Matrix

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

Promogran Prisma dressing (Systagenix Wound Management Ltd) 123 square cm= £18.31, 28 square cm= £6.43

UrgoStart

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

UrgoStart dressing (Urgo Ltd) 10cm × 10cm= £6.42, 15cm × 20cm= £11.54, 6cm × 6cm= £4.64, 12cm × 19cm heel= £8.84

UrgoStart Contact

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

UrgoStart (Urgo Ltd) Contact dressing 5cm × 7cm= £3.07

Silicone keloid dressings

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

*Silicone gel***Bapsarcare**

Silicone gel

Bapsarcare (Espere Healthcare Ltd) gel= £17.36

Ciltech

Silicone gel

Ciltech (Su-Med International (UK) Ltd) gel= £50.00

Dermatix

Silicone gel

Dermatix gel (Meda Pharmaceuticals Ltd) = £60.53

Kelo-cote UV

Silicone gel with SPF 30 UV protection

Kelo-cote (Alliance Pharmaceuticals Ltd) UV gel= £17.88

Kelo-cote gel

Silicone gel

Kelo-cote (Alliance Pharmaceuticals Ltd) gel= £51.00

Kelo-cote spray

Silicone spray

Kelo-cote (Alliance Pharmaceuticals Ltd) spray= £51.00

ScarSil

Silicone gel

ScarSil (Jobskin Ltd) gel= £15.19

Silgel STC-SE

Silicone gel

Silgel (Nagor Ltd) STC-SE gel= £19.00

*Silicone sheets***Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

Advasil Conform sheet (Advancis Medical) 10cm × 10cm square= £5.38, 15cm × 10cm rectangular= £9.48

Bapsarcare T

Self-adhesive silicone gel sheet

Bapsarcare T sheet (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.19, 5cm × 30cm rectangular= £9.19, 5cm × 7cm rectangular= £3.22

Cica-Care

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

Cica-Care sheet (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £30.02, 6cm × 12cm rectangular= £15.40

Ciltech

Silicone gel sheet

Ciltech sheet (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

Dermatix

Self-adhesive silicone gel sheet (clear- or fabric-backed)

Dermatix (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

Mepiform

Self-adhesive silicone gel sheet with polyurethane film backing

Mepiform sheet (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.47, 5cm × 7cm rectangular= £3.63, 9cm × 18cm rectangular= £14.20

Scar Fx

Self-adhesive, transparent, silicone gel sheet

Scar Fx sheet (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

Silgel

Silicone gel sheet

Silgel sheet (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

Adjunct dressings and appliances**Surgical absorbents**

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

*Cotton***Absorbent Cotton, BP**

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Absorbent Cotton, Hospital Quality

As for absorbent cotton but lower quality materials, shorter staple length etc.

Absorbent (Robert Bailey & Son Plc) cotton hospital quality

*Gauze and cotton tissue***Gamgee Tissue (blue)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

Gamgee (Robinson Healthcare) tissue blue label

Gamgee Tissue (pink)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

Gamgee (Robinson Healthcare) tissue pink label DT

*Gauze and tissue***Absorbent Cotton Gauze, BP 1988**

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Alvita (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

Clini (CliniSupplies Ltd) absorbent cotton BP 1988

Vernaid (Synergy Health (UK) Ltd) absorbent cotton BP 1988

Absorbent Cotton and Viscose Ribbon Gauze, BP 1988

Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

Vernaid Fast Edge ribbon gauze sterile (Synergy Health (UK) Ltd)

1.25cm, 2.5cm

Lint**Absorbent Lint, BPC**

Cotton cloth of plain weave with nap raised on one side from warp yarns

Absorbent (Robinson Healthcare) lint

Alvita (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

Clini (CliniSupplies Ltd) absorbent lint BPC

Pads**Drisorb**

Absorbent Dressing Pads, Sterile

Drisorb (Synergy Health (UK) Ltd) dressing pad 10cm × 20cm= £0.17

PremierPad

WoundASSIST (Huntleigh Healthcare Ltd) TNP canister= £20.30

Wound care accessories**Dressing packs**

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

Multiple Pack Dressing No. 1

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-weave bandages (banded)

Vernaïd (Synergy Health (UK) Ltd) multiple pack dressing

Non-drug tariff specification sterile dressing packs

Dressit

Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field

Dressit sterile dressing pack (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

Nurse It

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

Nurse It sterile dressing pack (Medicareplus International Ltd) with medium/large gloves= £0.55, small/medium gloves= £0.55

Polyfield Nitrile Patient Pack

Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron

Polyfield Nitrile Patient Pack (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

Sterile Dressing Pack with Non-Woven Pads

Vernaïd

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

Vernaïd (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

Sterile dressing packs

Vernaïd

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

Vernaïd (Synergy Health (UK) Ltd) sterile dressing pack

Woven and fabric swabs**Gauze Swab, PB 1988**

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

Alvita gauze swab 8ply (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

CS (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm

Clini gauze swab 8ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Gauze (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm

MeCoBo gauze swab 8ply (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Propax gauze (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm

Sovereign (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

Steraid (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

Vernaïd gauze swab 8ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Non-woven Fabric Swab

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

CS (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

Clini non-woven fabric swab 4ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

CliniMed (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

MeCoBo (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

Multisorb (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm

Sofsorb non-woven fabric swab 4ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Softswab non-woven fabric swab 4ply (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Topper (Systagenix Wound Management Ltd) 8 non-woven fabric swab 4ply non-sterile 10cm × 10cm

Filmated non-woven Fabric Swab

Regal

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile

Regal (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

Surgical adhesive tapes

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

Occlusive adhesive tapes

Blenderm

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

Blenderm (3M Health Care Ltd) tape 5cm= £3.43

Sleek

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

Leukoplast Sleek tape (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

Permeable adhesive tapes

3M Kind Removal Silicone Tape

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

3M Micropore Silicone tape (3M Health Care Ltd) 2.5cm= £3.65, 5cm= £6.60

Chemifix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Chemifix tape (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

Chemipore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Chemipore tape (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

Clinipore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Clinipore tape (CliniSupplies Ltd) 1.25cm= £0.36, 2.5cm= £0.75, 5cm= £1.02

Elastoplast

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

Tensoplast (BSN medical Ltd) elastic adhesive tape 2.5cm

Hypafix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Hypafix tape (BSN medical Ltd) 10cm= £4.80, 15cm= £7.11, 2.5cm= £1.73, 20cm= £9.43, 30cm= £13.63, 5cm= £2.75

Insil

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Insil tape (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

Leukofix

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Leukofix tape (BSN medical Ltd) 1.25cm= £0.58, 2.5cm= £0.93, 5cm= £1.63

Leukopor

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Leukopor tape (BSN medical Ltd) 1.25cm= £0.51, 2.5cm= £0.79, 5cm= £1.39

Medioplast

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Medioplast tape (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

Mediplast

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

Mediplast Zinc Oxide plaster (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

Mefix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Mefix tape (Molnlycke Health Care Ltd) 10cm= £3.00, 15cm= £4.08, 2.5cm= £1.06, 20cm= £5.23, 30cm= £7.50, 5cm= £1.87

Mepitac

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Mepitac tape (Molnlycke Health Care Ltd) 2cm= £7.19, 4cm= £7.19

Micropore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Micropore tape (3M Health Care Ltd) 1.25cm= £0.63, 2.5cm= £0.93, 5cm= £1.65

Omnifix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Omnifix tape (Paul Hartmann Ltd) 10cm= £4.23, 15cm= £6.24, 5cm= £2.51

OpSite Flexifix Gentle

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

OpSite Flexifix Gentle tape (Smith & Nephew Healthcare Ltd) 2.5cm= £10.86, 5cm= £20.37

Primafix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Primafix tape (Smith & Nephew Healthcare Ltd) 10cm= £2.46, 15cm= £3.63, 20cm= £4.47, 5cm= £1.67

Scanpor

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Scanpor tape (Bio-Diagnostics Ltd) 1.25cm= £0.57, 2.5cm= £0.93, 5cm= £1.78, 7.5cm= £2.61

Siltape

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Siltape (Advancis Medical) 2cm= £5.79, 4cm= £5.79

Strappal

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

Strappal adhesive tape (BSN medical Ltd) 2.5cm= £1.46, 5cm= £2.47, 7.5cm= £3.71

Transpore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Transpore tape (3M Health Care Ltd) 2.5cm= £0.86, 5cm= £1.51

Zinc Oxide Adhesive Tape, BP 1988

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

Fast Aid zinc oxide adhesive tape (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

Skin closure dressings

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

*Skin closure strips, sterile***Leukostrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Leukostrip (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.64

Omnistrip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Omnistrip (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £25.21

Steri-strip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Steri-strip (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.93

Bandages**Non-extensible bandages**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Open-weave Bandage, Type 1 BP 1988

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

Clini open wove bandage Type 1 BP 1988 (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

Vernaïd white open wove bandage (Synergy Health (UK) Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

White open wove bandage (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

Triangular Calico Bandage, BP 1980

Unbleached calico right-angled triangle

Clini triangular calico bandage BP 1980 (CliniSupplies Ltd) 90cm × 127cm

Triangular calico bandage (BSN medical Ltd) 90cm × 127cm

Light-weight conforming bandages

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

Acti-Wrap

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Acti-Wrap (cohesive/latex free) bandage (L&R Medical UK Ltd) 10cm × 4m = £0.85, 6cm × 4m = £0.49, 8cm × 4m = £0.72

Easifix

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Easifix bandage (BSN medical Ltd) 10cm × 4m = £0.53, 15cm × 4m = £0.90, 5cm × 4m = £0.37, 7.5cm × 4m = £0.44

Easifix K

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

Easifix K bandage (BSN medical Ltd) 10cm × 4m = £0.19, 15cm × 4m = £0.34, 2.5cm × 4m = £0.10, 5cm × 4m = £0.11, 7.5cm × 4m = £0.17

Hospiform

Fabric, plain weave, warp of polyamide, weft of viscose

Hospiform bandage (Paul Hartmann Ltd) 10cm × 4m = £0.20, 12cm × 4m = £0.25, 6cm × 4m = £0.14, 8cm × 4m = £0.18

K-Band

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

K-Band bandage (Urgo Ltd) 10cm × 4m = £0.29, 15cm × 4m = £0.52, 5cm × 4m = £0.21, 7cm × 4m = £0.27

Knit Fix

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

Knit Fix bandage (Robert Bailey & Son Plc) 10cm × 4m = £0.17, 15cm × 4m = £0.33, 5cm × 4m = £0.12, 7cm × 4m = £0.17

Knit-Band

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

Knit-Band bandage (CliniSupplies Ltd) 10cm × 4m = £0.18, 15cm × 4m = £0.31, 5cm × 4m = £0.10, 7cm × 4m = £0.16

Kontour

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Kontour bandage (Easigrip Ltd) 10cm × 4m = £0.40, 15cm × 4m = £0.66, 5cm × 4m = £0.28, 7.5cm × 4m = £0.35

Mollelast

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Mollelast (Lohmann & Rauscher) bandage 4cm × 4m = £0.32

Peha-haft

Polyamide and Cellulose Contour Bandage, cohesive, latex-free

Peha-haft bandage (Paul Hartmann Ltd) 10cm × 4m = £0.80, 12cm × 4m = £0.94, 2.5cm × 4m = £0.76, 4cm × 4m = £0.49, 6cm × 4m = £0.58, 8cm × 4m = £0.69

PremierBand

Polyamide and Cellulose Contour Bandage

PremierBand bandage (Shermond) 10cm × 4m = £0.17, 15cm × 4m = £0.25, 5cm × 4m = £0.12, 7.5cm × 4m = £0.14

Slinky

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Slinky bandage (Molnlycke Health Care Ltd) 10cm × 4m = £0.72, 15cm × 4m = £1.05, 7.5cm × 4m = £0.60

Stayform

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Stayform bandage (Robinson Healthcare) 10cm × 4m = £0.40, 15cm × 4m = £0.69, 5cm × 4m = £0.29, 7.5cm × 4m = £0.36

Tubular bandages and garments

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

Elasticated Surgical Tubular Stockinette, Foam padded is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP 1993*, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

Non-elasticated Cotton Stockinette, Bleached, BP 1988 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988*, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

Elasticated

Acti-Fast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

Acti-Fast 2-way stretch stockinette (L&R Medical UK Ltd) 10.75cm = £5.88, 17.5cm = £1.89, 20cm = £3.31, 3.5cm = £0.58, 5cm = £0.60, 7.5cm = £0.80

Clinifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

CliniFast stockinette (CliniSupplies Ltd) 10.75cm = £6.11, 17.5cm = £1.85, 3.5cm = £0.57, 5cm = £0.59, 7.5cm = £0.78, clava 5-14 years = £6.92, 6 months-5 years = £5.99, cycle shorts large adult = £16.77, medium adult = £14.71, small adult = £12.90, gloves large adult = £5.15, child/small adult = £5.15, gloves medium adult = £5.15, child = £5.15, gloves small child = £5.15, leggings (Blue, Pink, White) 11-14 years = £12.17, 2-5 years = £9.74, 5-8 years = £10.95, 8-11 years = £12.17, mittens 2-8 years = £3.04, 8-14 years = £3.04, up to 24 months = £3.04, socks 8-14 years = £3.07, up to 8 years = £3.04, tights (Blue, Pink, White) 6-24 months = £7.31, vest long sleeve (Blue, Pink, White) 11-

Support bandages

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

CliniLite

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

CliniLite bandage (CliniSupplies Ltd) 10cm × 4.5m= £0.83, 15cm × 4.5m= £1.20, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

CliniPlus

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

CliniPlus (CliniSupplies Ltd) bandage 10cm × 8.7m= £1.86

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

Profore #3 (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £4.13, latex free bandage 10cm × 8.7m= £4.49

Setocrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Setocrepe (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.24

Soffcrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Soffcrepe bandage (BSN medical Ltd) 10cm × 4.5m= £1.30, 15cm × 4.5m= £1.90, 5cm × 4.5m= £0.73, 7.5cm × 4.5m= £1.03

Adhesive bandages

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

Elastic Adhesive Bandage, BP 1993

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched
Tensoplast bandage (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

Cohesive bandages

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

Ultra (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.62

Compression bandages

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 251 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

Multi-layer compression bandaging

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

Zipzoc® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

Zinc Paste Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging
Excipients: may include cetostearyl alcohol, hydroxybenzoates

Viscopaste (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.84

Zinc Paste and Ichthammol Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

Excipients: may include cetostearyl alcohol
Ichthopaste (Evolan Pharma AB) bandage 7.5cm × 6m= £3.87

Zipzoc

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Zipzoc (Evolan Pharma AB) stockings= £34.70

Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

Graduated Compression hosiery, Class 1 Light Support is used for superficial or early varices, varicosis during pregnancy.

Graduated Compression hosiery, Class 2 Medium Support is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

Graduated Compression hosiery, Class 3 Strong Support is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

Compression values for hosiery and lymphoedema

garments *Class 1:* Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class 2* Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class 3* Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class 4* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class 4 super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

Graduated compression hosiery**Class 1 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Class 2 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Accessories**Suspender**

Suspender, for thigh stockings

Anklets**Class 2 Medium Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Knee caps**Class 2 Medium Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if

the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note, there are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments p. 1721.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred. Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP
 Aciclovir Oral Suspension, BP, 200 mg/5 mL
 Aciclovir Tablets, BP, 200 mg
 Aciclovir Tablets, BP, 800 mg
 Amoxicillin Capsules, BP
 Amoxicillin Oral Powder, DPF
 Amoxicillin Oral Suspension, BP
 Artificial Saliva Gel, DPF
 Artificial Saliva Oral Spray, DPF
 Artificial Saliva Pastilles, DPF
 Artificial Saliva Protective Spray, DPF
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):
BioXtra[®] Gel Mouthspray
BioXtra[®] Moisturising Gel
Glandosane[®]
Saliveze[®]
 Artificial Saliva Substitute Spray, DPF
 Aspirin Tablets, Dispersible, BP
 Azithromycin Capsules, 250 mg, DPF
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF
 Azithromycin Tablets, 250 mg, DPF
 Azithromycin Tablets, 500 mg, DPF
 Beclometasone Pressurised Inhalation, BP,
 50 micrograms/metered inhalation, CFC-free, as:
Clenil Modulite[®]
 Benzylamine Mouthwash, BP 0.15%
 Benzylamine Oromucosal Spray, BP 0.15%
 Betamethasone Soluble Tablets, 500 micrograms, DPF
 Carbamazepine Tablets, BP
 Cefalexin Capsules, BP
 Cefalexin Oral Suspension, BP
 Cefalexin Tablets, BP
 Cefradine Capsules, BP
 Cetirizine Oral Solution, BP, 5 mg/5 mL
 Cetirizine Tablets, BP, 10 mg
 Chlorhexidine Gluconate Gel, BP
 Chlorhexidine Mouthwash, BP
 Chlorhexidine Oral Spray, DPF
 Chlorphenamine Oral Solution, BP
 Chlorphenamine Tablets, BP
 Choline Salicylate Dental Gel, BP
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
 Clarithromycin Tablets, BP
 Clindamycin Capsules, BP
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
 Diazepam Oral Solution, BP, 2 mg/5 mL
 Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP
 Dihydrocodeine Tablets, BP, 30 mg
 Doxycycline Tablets, Dispersible, BP
 Doxycycline Capsules, BP, 100 mg
 Doxycycline Tablets, 20 mg, DPF
 Ephedrine Nasal Drops, BP
 Erythromycin Ethyl Succinate Oral Suspension, BP
 Erythromycin Ethyl Succinate Tablets, BP
 Erythromycin Stearate Tablets, BP
 Erythromycin Tablets, Gastro-resistant, BP
 Fluconazole Capsules, 50 mg, DPF
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF
 Hydrocortisone Cream, BP, 1%
 Hydrocortisone Oromucosal Tablets, BP
 Hydrogen Peroxide Mouthwash, BP, 6%
 Ibuprofen Oral Suspension, BP, sugar-free
 Ibuprofen Tablets, BP
 Lansoprazole Capsules, Gastro-resistant, BP
 Lidocaine Ointment, BP, 5%
 Lidocaine Spray 10%, DPF
 Loratadine Syrup, 5 mg/5 mL, DPF
 Loratadine Tablets, BP, 10 mg
 Menthol and Eucalyptus Inhalation, BP 1980
 Metronidazole Oral Suspension, BP
 Metronidazole Tablets, BP
 Miconazole Cream, BP
 Miconazole Oromucosal Gel, BP
 Miconazole and Hydrocortisone Cream, BP
 Miconazole and Hydrocortisone Ointment, BP
 Nystatin Oral Suspension, BP
 Omeprazole Capsules, Gastro-resistant, BP
 Oxytetracycline Tablets, BP
 Paracetamol Oral Suspension, BP
 Paracetamol Tablets, BP
 Paracetamol Tablets, Soluble, BP
 Phenoxymethylpenicillin Oral Solution, BP
 Phenoxymethylpenicillin Tablets, BP
 Promethazine Hydrochloride Tablets, BP
 Promethazine Oral Solution, BP
 Saliva Stimulating Tablets, DPF
 Sodium Chloride Mouthwash, Compound, BP
 Sodium Fluoride Mouthwash, BP
 Sodium Fluoride Oral Drops, BP
 Sodium Fluoride Tablets, BP
 Sodium Fluoride Toothpaste 0.619%, DPF
 Sodium Fluoride Toothpaste 1.1%, DPF
 Sodium Fusidate Ointment, BP
 Temazepam Oral Solution, BP
 Temazepam Tablets, BP
 Tetracycline Tablets, BP
 Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

Artificial Saliva Gel

consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray

(proprietary product: *Aequasyl*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules

azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL

azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets

azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms

betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL

clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL

clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg

fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL

loratadine 5 mg/5 mL

Saliva Stimulating Tablets

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF)

Nurse Prescribers' Formulary for Community Practitioners

The Nurse Prescribers' Formulary for Community Practitioners is for use by District Nurses and Specialist Community Public Health Nurses (including Health Visitors) who have received nurse prescriber training. It provides a list of preparations approved by the Secretary of State that can be prescribed for patients receiving NHS treatment on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales). Community practitioner nurse prescribers should only prescribe items appearing in the nurse prescribers' list set out below (for the indications specified). Most medicinal preparations should be prescribed generically, except where this would not be clinically appropriate or where there is no approved generic name—see individual entries for further information.

The Nurse Prescribers' Advisory Group p. vii oversees the preparation of the NPF and advises UK health ministers on the list of preparations that may be prescribed by community practitioner nurse prescribers. Feedback from nurse prescribers is welcome and will be taken into account when reviewing this list; comments and constructive criticism should be sent to editor@bnf.org.

How to use the NPF

The list of medicinal preparations includes:

- Links to BNF monographs to allow full prescribing information for each preparation to be accessed;
- Details of the indications for which each medicinal preparation can be prescribed;
- Signposting to doses for community practitioner nurse prescribers where these differ from those in the BNF for the specified indications;
- Additional information that should be considered before prescribing certain preparations.

The NPF should be used in conjunction with BNF monographs to ensure that all relevant prescribing information is considered when prescribing decisions are made; links to the relevant BNF monographs allow quick access to this prescribing information. Most of the doses that can be prescribed by nurse prescribers for the specified indications are in line with those in BNF monographs, so the BNF doses for those indications can be used. If doses that can be prescribed by nurse prescribers differ from those in the BNF, specific indications and doses have been added to BNF monographs. These can be found towards the bottom of indication and dose sections of the relevant monographs with the statement "dose approved for use by community practitioner nurse prescribers" following the indication; individual preparation entries signpost to these doses.

General guidance for community practitioner nurse prescribers (Nurse Prescribers' Formulary—General guidance) includes information on prescribing for nurse prescribers and can be found in online versions of the BNF and the BNF app. Treatment summaries for nurse prescribers (e.g. Nurse Prescribers' Formulary—Analgesics) can also be found in online versions of the BNF and the BNF app; these provide an overview of the drug management or prophylaxis

of conditions that are commonly managed by nurse prescribers and/or information on the use of appliances, such as stoma appliances. In order to select safe and effective medicines for individual patients, information in the treatment summaries must be used in conjunction with other prescribing details about the drugs and knowledge of the patient's medical and drug history.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

- **Almond oil ear drops p. 1253, BP**
 - ▶ *Removal of ear wax*
- **Arachis oil enema p. 65, NPF**
 - ▶ *To soften impacted faeces*
- **Aspirin tablets, dispersible, 300 mg p. 134, BP** (max. 96 tablets; max. pack size 32 tablets)
 - ▶ *Mild to moderate pain* Pyrexia (for both indications, see doses for community practitioner nurse prescribers)
- **Bisacodyl suppositories p. 65, BP** (includes 5-mg and 10-mg strengths)
 - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Bisacodyl tablets p. 65, BP**
 - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Catheter maintenance solutions, sodium chloride p. 838, NPF**
 - ▶ *For removal of clots and other debris, to be instilled as required*
- **Catheter maintenance solutions, 'Solution G' p. 838, NPF**
 - ▶ *For prevention of catheter encrustation and crystallisation; in very severe cases use 'Solution R'*
- **Catheter maintenance solutions, 'Solution R' p. 838, NPF**
 - ▶ *For prevention of catheter encrustation and dissolution of crystallisation if 'Solution G' unsuccessful*
- **Chlorhexidine gluconate alcoholic solutions** containing at least 0.05%, see chlorhexidine p. 1331 and chlorhexidine gluconate with isopropyl alcohol p. 1332
 - ▶ *Skin disinfection*
- **Chlorhexidine gluconate aqueous solutions p. 1331** containing at least 0.05%
 - ▶ *Skin disinfection*
- **Choline salicylate dental gel p. 1269, BP**
 - ▶ *Mild oral and perioral lesions*
- **Clotrimazole cream 1% p. 1286, BP**
 - ▶ *Fungal skin infections*
- **Co-danthramer capsules, NPF** [discontinued]
- **Co-danthramer capsules, strong, NPF** [discontinued]
- **Co-danthramer oral suspension p. 66, NPF**
 - ▶ *In consultation with doctor, constipation in palliative care*
- **Co-danthramer oral suspension, strong p. 66, NPF**
 - ▶ *In consultation with doctor, constipation in palliative care*
- **Co-danthrusate capsules, BP** [discontinued]
- **Co-danthrusate oral suspension p. 67, NPF**
 - ▶ *In consultation with doctor, constipation in palliative care*
- **Crotamiton cream p. 1319, BP**
- **Pruritus (including pruritus after scabies)**

- **Crotamiton lotion, BP** [discontinued]
- **Dimeticone barrier creams** containing at least 10%, see barrier creams and ointments p. 1276
 - ▶ *For use as a barrier preparation*
- **Dimeticone lotion p. 1291, NPF**
 - ▶ *Head lice*
- **Docusate sodium capsules p. 65, BP**
 - ▶ *Chronic constipation*
- **Docusate sodium enema p. 65, NPF**
 - ▶ *Chronic constipation*
- **Docusate sodium oral solution p. 65, BP**
 - ▶ *Chronic constipation*
- **Docusate sodium oral solution, paediatric p. 65, BP**
 - ▶ *Chronic constipation*
- **Econazole nitrate cream 1% p. 1287, BP**
 - ▶ *Fungal skin infections*

Emollient creams and ointments, paraffin-containing p. 1280 as listed below:

- ▶ *Dry skin conditions*|*Eczema*|*Psoriasis*|*Ichthyosis*|*Pruritus*
- **Cetaben[®] emollient cream**
- **Dermamist[®]**
- **Diprobase[®] cream**
- **Diprobase[®] ointment**
- **Doublebase[®]**
- **Doublebase[®] Dayleve gel**
- **E45[®] cream**
- **Emulsifying ointment, BP**
- **Hydromol[®] cream**
- **Hydrous ointment, BP**
- **Lipobase[®]**
- **Liquid and white soft paraffin ointment, NPF**
- **Neutrogena[®] Norwegian Formula Dermatological cream** [discontinued]
- **Oilatum[®] cream**
- **Oilatum[®] Junior cream**
- **Paraffin, white soft, BP**
- **Paraffin, yellow soft, BP**
- **Ultrabase[®]**
- **Unguentum M[®]**

Emollients, urea-containing p. 1281 as listed below:

- **Aquadrate[®] 10% w/w cream**
 - ▶ *Dry, scaling, and itching skin*
- **Balneum[®] Plus cream**
 - ▶ *Dry, scaling, and itching skin*
- **E45[®] Itch Relief cream**
 - ▶ *Dry, scaling, and itching skin*
- **Eucerin[®] Intensive 10% w/w urea treatment cream**
 - ▶ *Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis*
- **Eucerin[®] Intensive 10% w/w urea treatment lotion**
 - ▶ *Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis*
- **Hydromol[®] Intensive**
 - ▶ *Dry, scaling, and itching skin*
- **Nutraplus[®] cream**
 - ▶ *Dry, scaling, and itching skin*

Emollient bath and shower products, paraffin-containing p. 1277 as listed below:

- **Aqueous cream, BP**
 - ▶ *Dry skin conditions*
- **Cetaben[®] emollient bath additive**
 - ▶ *Dry skin conditions, including eczema*
- **Dermalo[®] bath emollient**
 - ▶ *Dermatitis*|*Dry skin conditions, including ichthyosis*|*Pruritus of the elderly*
- **Doublebase[®] emollient bath additive**
 - ▶ *Dry skin conditions, including dermatitis and ichthyosis*|*Pruritus of the elderly*
- **Doublebase[®] emollient shower gel**
 - ▶ *Dry, chapped, or itchy skin conditions*
- **Doublebase[®] emollient wash gel**
 - ▶ *Dry, chapped, or itchy skin conditions*

- **Hydromol[®] bath and shower emollient**
 - ▶ *Dry skin conditions*|*Eczema*|*Ichthyosis*|*Pruritus of the elderly*
 - **Oilatum[®] emollient**
 - ▶ *Dry skin conditions including dermatitis and ichthyosis*|*Pruritus of the elderly*
 - **Oilatum[®] gel** [discontinued]
 - **Oilatum[®] Junior bath additive**
 - ▶ *Dry skin conditions including dermatitis and ichthyosis*|*Pruritus of the elderly*
 - **Zerolatum[®] emollient medicinal bath oil**
 - ▶ *Dry skin conditions*|*Dermatitis*|*Ichthyosis*
- #### Emollient bath and shower products, soya-bean oil-containing p. 1279 as listed below:
- **Balneum[®]** (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 - ▶ *Dry skin conditions including those associated with dermatitis and eczema*
 - **Balneum Plus[®] bath oil** (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 - ▶ *Dry skin conditions including those associated with dermatitis and eczema where pruritus also experienced*
 - **Folic acid tablets 400 micrograms p. 1078, BP**
 - ▶ *Prevention of neural tube defects (in those at a low risk of conceiving a child with a neural tube defect)*
 - **Glycerol suppositories p. 67, BP**
 - ▶ *Constipation*
 - **Ibuprofen oral suspension p. 1195, BP** (except for indications and doses that are prescription-only)
 - ▶ *Pain and inflammation in rheumatic disease and other musculoskeletal disorders*|*Mild to moderate pain including dysmenorrhoea*|*Migraine*|*Dental pain*|*Headache*|*Fever*|*Symptoms of colds and influenza*|*Neuralgia*|*Mild to moderate pain*|*Pain and inflammation of soft-tissue injuries*|*Pyrexia with discomfort*|*Post-immunisation pyrexia in infants* (for all indications, see doses for community practitioner nurse prescribers)
 - **Ibuprofen tablets p. 1195, BP** (except for indications and doses that are prescription-only)
 - ▶ *Pain and inflammation in rheumatic disease and other musculoskeletal disorders*|*Mild to moderate pain including dysmenorrhoea*|*Migraine*|*Dental pain*|*Headache*|*Fever*|*Symptoms of colds and influenza*|*Neuralgia*|*Mild to moderate pain*|*Pain and inflammation of soft-tissue injuries*|*Pyrexia with discomfort* (for all indications, see doses for community practitioner nurse prescribers)
 - **Ispaghula husk granules p. 59, BP**
 - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
 - **Ispaghula husk granules, effervescent p. 59, BP**
 - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
 - **Ispaghula husk oral powder, BP** [discontinued]
 - **Lactulose solution p. 60, BP**
 - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
 - **Lidocaine hydrochloride ointment p. 1422, BP**
 - ▶ *Sore nipples from breast-feeding*
 - **Lidocaine and chlorhexidine gel, BP**, see chlorhexidine with lidocaine p. 837
 - ▶ *Surface anaesthesia* (see dose for community practitioner nurse prescribers)
 - **Macrogol oral liquid, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 61
 - ▶ *Chronic constipation*
 - **Macrogol oral powder, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 61

- ▶ *Chronic constipation*| *Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*
- **Macrogol oral powder, compound, half-strength, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 61
- ▶ *Chronic constipation*| *Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*
- **Magnesium hydroxide mixture p. 63, BP**
- ▶ *Constipation*
- **Magnesium sulfate paste, BP**
- ▶ *Adjunct in management of boils, apply under dressing; stir before use*
- **Malathion aqueous lotions p. 1291** containing at least 0.5%
- ▶ *Head lice*| *Scabies*
- **Mebendazole oral suspension p. 650, NPF**
- ▶ *Threadworm infections* (see dose for community practitioner nurse prescribers)
- **Mebendazole tablets p. 650, NPF**
- ▶ *Threadworm infections* (see dose for community practitioner nurse prescribers)
- **Methylcellulose tablets, BP** [discontinued]
- ▶ *Constipation*
- **Miconazole cream 2% p. 1288, BP**
- ▶ *Fungal skin infections*
- **Miconazole oromucosal gel p. 1272, BP**
- ▶ *Prevention and treatment of oral candidiasis* (see dose for community practitioner nurse prescribers)
- **Mouthwash solution-tablets, NPF**
- **Nicotine inhalation cartridge for oromucosal use p. 525, NPF**
- ▶ *Nicotine replacement therapy*
- **Nicotine lozenge p. 525, NPF**
- ▶ *Nicotine replacement therapy*
- **Nicotine medicated chewing gum p. 525, NPF**
- ▶ *Nicotine replacement therapy in individuals who smoke fewer than 20 cigarettes each day*| *Nicotine replacement therapy in individuals who smoke more than 20 cigarettes each day or who require more than 15 pieces of 2-mg strength gum each day*
- **Nicotine nasal spray p. 525, NPF**
- ▶ *Nicotine replacement therapy*
- **Nicotine oral spray p. 525, NPF**
- ▶ *Nicotine replacement therapy*
- **Nicotine sublingual tablets p. 525, NPF**
- ▶ *Nicotine replacement therapy in individuals who smoke fewer than 20 cigarettes each day*| *Nicotine replacement therapy in individuals who smoke more than 20 cigarettes each day*
- **Nicotine transdermal patches p. 525, NPF**
- ▶ *Nicotine replacement therapy*
- **Nystatin oral suspension p. 1272, BP**
- ▶ *Oral and perioral fungal infections* (see dose for community practitioner nurse prescribers)
- **Olive oil ear drops p. 1253, BP**
- ▶ *Removal of earwax* (see dose for community practitioner nurse prescribers)
- **Paracetamol oral suspension p. 468, BP** (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)
- ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*| *Post-immunisation pyrexia in infants (refer to doctor if pyrexia persists)*
- **Paracetamol tablets p. 468, BP** (max. 96 tablets; max. pack size 32 tablets)
- ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*
- **Paracetamol tablets, soluble p. 468, BP** (max. 96 tablets; max. pack size 32 tablets)
- ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*
- **Permethrin cream p. 1291, NPF**
- ▶ *Scabies*
- **Phosphates enema, BP**, see sodium acid phosphate with sodium phosphate p. 63
- ▶ *Constipation, using Phosphates enema BP Formula B*| *Constipation, using Phosphates enema (Cleen Ready-to-Use)* (for both indications, see doses for community practitioner nurse prescribers)
- **Povidone-iodine solution p. 1330, BP**
- ▶ *Skin disinfection*
- **Senna oral solution p. 67, NPF**
- ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Senna tablets p. 67, BP**
- ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Senna with ispaghula husk granules p. 68, NPF**
- ▶ *Constipation*
- **Sodium chloride solution, sterile, BP**, see Irrigation solutions p. 1333
- ▶ *Skin cleansing*
- **Sodium citrate compound enema p. 836, NPF**
- ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Sodium picosulfate capsules, NPF** [discontinued]
- **Sodium picosulfate elixir p. 69, NPF**
- ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Spermicidal contraceptive: Gygel[®] contraceptive jelly**, see nonoxinol p. 861
- ▶ *Spermicidal contraceptive in conjunction with barrier methods of contraception such as diaphragms or caps*
- **Sterculia granules p. 59, NPF**
- ▶ *Constipation*
- **Sterculia with frangula granules p. 60, NPF**
- ▶ *Constipation*
- **Titanium ointment, BP**, see barrier creams and ointments p. 1276
- ▶ *For use as a barrier preparation*
- **Water for injections, BP**; available as 2-mL ampoules, 5-mL ampoules, 10-mL ampoules, 10-mL vials, 20-mL ampoules, and 100-mL vials
- **Zinc and castor oil ointment, BP**, see barrier creams and ointments p. 1276
- ▶ *For use as a barrier preparation*
- **Zinc oxide and dimeticone spray, NPF**, see barrier creams and ointments p. 1276
- ▶ *For use as a barrier preparation*

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated N_x.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN

and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales: www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff

Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm

Scottish Drug Tariff: www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

- **Arachis oil enema**
 - ▶ arachis oil 100%
- **Catheter maintenance solution, sodium chloride**
 - ▶ (proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%
- **Catheter maintenance solution, 'Solution G'**
 - ▶ (proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%
- **Catheter maintenance solution, 'Solution R'**
 - ▶ (proprietary products: *OptiFlo R*; *Uro-Tainer Solutio R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%
- **Chlorhexidine gluconate alcoholic solutions**
 - ▶ (proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution
- **Chlorhexidine gluconate aqueous solutions**
 - ▶ (proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution
- **Co-danthramer capsules ^[PoM]**
 - ▶ co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)
- **Co-danthramer capsules, strong ^[PoM]**
 - ▶ co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)
- **Co-danthramer oral suspension ^[PoM]**
 - ▶ co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)
- **Co-danthramer oral suspension, strong ^[PoM]**
 - ▶ co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)
- **Co-danthrusate oral suspension ^[PoM]**
 - ▶ (proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)
- **Dimeticone barrier creams**
 - ▶ (proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Stoppel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%
- **Dimeticone lotion**
 - ▶ (proprietary product: *Hedrin*), dimeticone 4%
- **Docusate enema**
 - ▶ (proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g
- **Liquid and white soft paraffin ointment**
 - ▶ liquid paraffin 50%, white soft paraffin 50%
- **Macrogol oral liquid, compound**
 - ▶ (proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL
- **Macrogol oral powder, compound**
 - ▶ (proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*[®] as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K⁺ 5.4 mmol/litre)
- **Macrogol oral powder, compound, half-strength**
 - ▶ (proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet
- **Malathion aqueous lotions**
 - ▶ (proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis
- **Mebendazole oral suspension ^[PoM]**
 - ▶ (proprietary product: *Vermoz*), mebendazole 100 mg/5 mL
- **Mebendazole tablets ^[PoM]**
 - ▶ (proprietary products: *Oxev*, *Vermoz*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)
- **Mouthwash solution-tablets**
 - ▶ consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash
- **Nicotine inhalation cartridge for oromucosal use**
 - ▶ (proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece); to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device)
- **Nicotine lozenge**
 - ▶ nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)
- **Nicotine medicated chewing gum**
 - ▶ (proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg
- **Nicotine nasal spray**
 - ▶ (proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray
- **Nicotine oral spray**
 - ▶ (proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray
- **Nicotine sublingual tablets**
 - ▶ (proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))
- **Nicotine transdermal patches**
 - ▶ releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*,

NiQuitin Clear) (prescriber should specify the brand to be dispensed)

- **Permethrin cream**

- ▶ (proprietary product: *Lyclear Dermal Cream*), permethrin 5%

- **Senna oral solution**

- ▶ (proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

- **Senna and ispaghula granules**

- ▶ (proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

- **Sodium citrate compound enema**

- ▶ (proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

- **Sodium picosulfate capsules**

- ▶ (proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

- **Sodium picosulfate elixir**

- ▶ (proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

- **Sterculia granules**

- ▶ (proprietary product: *Normacol Granules*), sterculia 62%

- **Sterculia and frangula granules**

- ▶ (proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

- **Zinc oxide and dimeticone spray**

- ▶ (proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

- **Zinc oxide impregnated medicated bandage**

- ▶ (proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

- **Zinc oxide impregnated medicated stocking**

- ▶ (proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at www.gov.uk/government/publications/mixing-of-medicines-prior-to-administration-in-clinical-practice-medical-and-non-medical-prescribing).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 480, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF) p. 1725 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 480, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 487, transdermal fentanyl p. 482 and oral diazepam p. 366, dihydrocodeine tartrate p. 480, lorazepam p. 361, oxycodone hydrochloride p. 490 or temazepam p. 512.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 366, dihydrocodeine tartrate p. 480, lorazepam p. 361 and temazepam p. 512.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

Paramedics

Paramedic Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Paramedic Independent Prescribers must work within their own level of professional competence and expertise.

Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at tinyurl.com/cdslke.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:
www.mhra.gov.uk/yellowcard**REPORT OF SUSPECTED ADVERSE DRUG REACTIONS**

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNF or www.mhra.gov.uk/yellowcard for guidance. Do not be put off reporting because some details are not known.

PATIENT DETAILS Patient Initials: _____ Sex: M / F Is the patient pregnant? Y / N Ethnicity: _____
Age (at time of reaction): _____ Weight (kg): _____ Identification number (e.g. Practice or Hospital Ref): _____

SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

SUSPECTED REACTION(S) Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):**Outcome**

Recovered
Recovering
Continuing
Other

Date reaction(s) started: _____ Date reaction(s) stopped: _____

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

Patient died due to reaction Involved or prolonged inpatient hospitalisation
 Life threatening Involved persistent or significant disability or incapacity
 Congenital abnormality Medically significant; please give details: _____

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

Mild Unpleasant, but did not affect everyday activities Bad enough to affect everyday activities

It's easy to report online: www.mhra.gov.uk/yellowcard

OTHER DRUG(S) (including self-medication and complementary remedies)

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

Additional relevant information e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

Adult Advanced Life Support Algorithm

Adult advanced life support

Give high-quality chest compressions, and:

- Give oxygen
- Use waveform capnography
- Continuous compressions if advanced airway
- Minimise interruptions to compressions
- Intravenous or intraosseous access
- Give adrenaline every 3–5 min
- Give amiodarone after 3 shocks
- Identify and treat reversible causes

Identify and treat reversible causes

- Hypoxia
 - Hypovolaemia
 - Hypo-/hyperkalaemia/metabolic
 - Hypo/hyperthermia
 - Thrombosis – coronary or pulmonary
 - Tension pneumothorax
 - Tamponade – cardiac
 - Toxins
- Consider ultrasound imaging to identify reversible causes

Consider

- Coronary angiography/percutaneous coronary intervention
- Mechanical chest compressions to facilitate transfer/treatment
- Extracorporeal CPR

After ROSC

- Use an ABCDE approach
- Aim for SpO₂ of 94–98% and normal PaCO₂
- 12-lead ECG
- Identify and treat cause
- Targeted temperature management

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

Acute coronary syndromes

▶ **ANGINA: UNSTABLE**

Aspirin dispersible tablets p. 133 (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

▶ **PLUS**

▶ **EITHER Glyceryl trinitrate aerosol spray p. 235**

(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

▶ **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**

Treat as for Angina: unstable

▶ **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**

Aspirin dispersible tablets (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

Glyceryl trinitrate aerosol spray (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

Metoclopramide hydrochloride injection p. 455 (5 mg/mL)

BY INTRAVENOUS INJECTION

▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg

▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg

▶ Adult over 19 years: 10 mg

Diamorphine hydrochloride injection p. 480 (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary

▶ Elderly or frail patients: reduce dose by half

▶ **OR Morphine sulfate injection p. 487** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary

▶ Elderly or frail patients: reduce dose by half

Oxygen, if appropriate

Airways disease, obstructive

▶ **ASTHMA: ACUTE**

EvGri Emergency asthma consultations should be regarded as being for severe acute asthma until shown otherwise.

Patients with features of severe or life-threatening acute asthma, and patients who fail to respond adequately at any time should be referred to hospital immediately. Acute asthma in children aged under 2 years should be managed in hospital.

High-flow oxygen should be given if available (via tight-fitting face mask in children) to achieve and maintain an SpO₂ level of 94–98%.

▶ **EITHER Salbutamol aerosol inhaler p. 270**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ **OR Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes

or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes

or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes

or as necessary

▶ Adult: 5 mg every 20–30 minutes or as necessary

▶ **OR Terbutaline sulfate nebuliser solution p. 272** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ Adult: 10 mg every 20–30 minutes or as necessary

▶ **PLUS (in all cases)**

▶ **EITHER Prednisolone tablets p. 721 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ Adult: 40–50 mg once daily for at least 5 days

▶ **OR Hydrocortisone p. 719 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission.

While awaiting ambulance, repeat **nebulised beta₂ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 264

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

▶ CROUP

Dexamethasone oral solution p. 717 (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▶ ANAPHYLAXIS

Adrenaline/epinephrine injection p. 239 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow oxygen and intravenous fluids should be given as soon as available.

Chlorphenamine maleate injection p. 301

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

Hydrocortisone (preferably as sodium succinate)

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

Bacterial infection

▶ MENINGOCOCCAL DISEASE

Benzylpenicillin sodium injection p. 585 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ OR if history of allergy to penicillin

Cefotaxime injection p. 562 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 610 (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 537.

Hypoglycaemia

▶ DIABETIC HYPOGLYCAEMIA

Fast-acting carbohydrate (glucose p. 1097 is preferred)

CHILD UP TO 5 YEARS

By mouth

- ▶ 5 g (20 mL *Lift*[®] (previously *Glucosource*[®]) oral glucose liquid or 1.5 glucose tablets or half a tube of glucose 40% oral gel or 1 teaspoonful of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- ▶ 5 g (half a tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 5–11 YEARS

By mouth

- ▶ 10 g (40 mL *Lift*[®] (previously *Glucosource*[®]) oral glucose liquid or 3 glucose tablets or 1 tube of glucose 40% oral gel or 2 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- ▶ 10 g (1 tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 12–17 YEARS

By mouth

- ▶ 15 g (60 mL *Lift*[®] (previously *Glucosource*[®]) oral glucose liquid or 4 glucose tablets or 1.5 tubes of glucose 40% oral gel or 3 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- ▶ 15 g (1.5 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

ADULT

By mouth

- ▶ 15–20 g (60–80 mL *Lift*[®] (previously *Glucosource*[®]) oral glucose liquid or 4–5 glucose tablets or 1.5–2 tubes of glucose 40% oral gel or 150–200 mL pure fruit juice or 3–4 heaped teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 10–15 minutes if necessary

Or by buccal administration [in conscious but uncooperative patients]

- ▶ 15–20 g (1.5–2 tubes of glucose 40% oral gel), repeated after 10–15 minutes if necessary

NOTE Examples of glucose preparations which can be used to give oral doses are based on the use of oral liquid containing glucose 250 mg/mL and tablets containing glucose 4 g per tablet. Buccal dosing is based on tubes of 40% oral gel containing glucose 10 g per tube.

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

Glucagon injection p. 767 (1 mg/mL)

BY INTRAMUSCULAR INJECTION

- ▶ Child 8 years and below or body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child 9–17 years or body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

Glucose 10% intravenous infusion p. 1097

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)
- ▶ Adult: 150–200 mL infused over 15 minutes

- ▶ **OR Glucose 20% intravenous infusion**

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 75–100 mL infused over 15 minutes

Seizures

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 366** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 362**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
1 centimetre (cm) = 10 mm
1 inch (in) = 25.4 mm
1 foot (ft) = 12 inches
12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
1 gram (g) = 1000 milligrams (mg)
1 milligram (mg) = 1000 micrograms
1 microgram = 1000 nanograms
1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
1 millilitre (1 mL) = 1000 microlitres
1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
1 megajoule (MJ) = 238.8 kilocalories (kcal)
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK 1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1696

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

- ACBS** Advisory Committee on Borderline Substances, *see* Borderline Substances

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

- a. c.** = ante cibum (before food)
- b. d.** = bis die (twice daily)
- o. d.** = omni die (every day)
- o. m.** = omni mane (every morning)
- o. n.** = omni nocte (every night)
- p. c.** = post cibum (after food)
- p. r. n.** = pro re nata (when required)
- q. d. s.** = quater die sumendum (to be taken four times daily)
- q. q. h.** = quarta quaque hora (every four hours)
- stat** = immediately
- t. d. s.** = ter die sumendum (to be taken three times daily)
- t. i. d.** = ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol
